

## Investment strategy

Investing with the limited risk of bonds. The fund invests mainly in creditworthy government bonds and to a lesser extent in corporate bonds. Only bonds denominated in Euro are invested. To this end, the manager uses a structured investment process with an emphasis on internal research in order to detect investment opportunities in the euro zone bond market. The most important decision lies in the division of the portfolio over the market segments (government, corporate bonds) and the selection of specific issuers within those segments.
