

FR0010149120

Monthly Factsheet - 31/10/2024

INVESTMENT OBJECTIVE

Fund invested in bonds and other debt securities denominated in Euro. Its active, flexible low duration strategy enables the Fund to implement conviction-driven strategies mainly on European markets with no bias to any benchmark. In addition, the Fund seeks to invest sustainably for long-term growth and implements a socially responsible investment approach. It seeks to outperform its reference indicator, the ICE BofA ML 1-3 Y Euro All Government Index (EUR), over a 2-year investment horizon.

Fund management analysis can be found on P.3

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

- US growth continues to gravitate above its historical average at +2.8% in the third quarter, benefiting from resilient domestic demand.
- All the indicators point to greater resilience in the US economy, while inflation has also shown resilience, with a smaller-than-expected fall in the headline component to +2.4% YoY and a reacceleration in core inflation to +3.3% YoY.
- The low point now seems to be behind us in the eurozone, as indicated by the stronger-than-expected rebound in GDP growth of +0.4% in the third quarter in the zone, on the back of more favourable momentum in Germany and France.
- The European Central Bank cut its key rate by a further 25bp this month. This decision comes against a backdrop of headline inflation in the region at a 3-year low, contrasting with core inflation and the service component of inflation, which are still above the ECB's target at +2.7% and +3.9% respectively.
- This environment of resilient growth has pushed yields higher, with the US 10-year gaining +50bp and its German counterpart +27bp. Risk appetite also paused, with credit spreads widening by +3bp on the Itraxx Xover index over the month.

PERFORMANCE COMMENTARY

- The fund generated a positive performance, outperforming its reference indicator, which posted a negative return over the period.
- Our cautious stance on modified duration and our inflation strategies enabled the portfolio to show a degree of resilience in an environment marked by a general rise in interest rates. However, our steepening strategy suffered as yield curves flattened over the period.
- In addition, the portfolio benefited from its carry strategies on our credit bonds, slightly offset by our hedges aimed at reducing our exposure to the riskiest part of the market.
- Finally, the portfolio continues to benefit from the good performance of our selection of Collateralized Loan Obligations (CLOs) and our exposure to money market instruments.

OUTLOOK AND INVESTMENT STRATEGY

- The relative resilience of the various economies, with a soft landing for the European and US economies and inflation gradually returning to target, should enable the ECB and the Fed to continue their rate-cutting cycles.
- However, given the political and geopolitical risks and the increasingly tight valuations on certain markets, the portfolio is maintaining a balanced positioning with a modified duration that has been kept below 2 over the period.
- On the one hand, a significant allocation to credit, mainly invested in short-term, highly-rated corporate bonds and CLOs, which offer an attractive source of carry and a low beta relative to market volatility.
- On the other hand, a long position on short maturities and a yield curve steepening strategy in the eurozone, which should benefit from a flight to quality in an unfavourable scenario, but also from the central banks' rate cutting cycle and upward pressure on the long end.
- We are also retaining protection on the credit market (iTraxx Xover), with markets trading at tight levels in an uncertain geopolitical environment.
- Finally, we have allocated part of the portfolio to money market instruments, which represent an attractive source of carry with limited risk.

PORTFOLIO ESG SUMMARY

This financial product is classified Article 8 of the Sustainable Finance Disclosure Regulation (“SFDR”). The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product are :

- A minimum of 10% of the Fund’s net assets are invested in green, social, sustainability or sustainability-linked corporate or sovereign bonds as well as corporate issuers positively aligned with one of 9 out of 17 United Nations Sustainable Development Goals;
- The minimum levels of sustainable investments with environmental and social objectives are respectively 1% and 3% of the Sub-Fund’s net assets;
- Investment universe is actively reduced for corporate bonds by at least 20%;
- ESG analysis applied to at least 90% of issuers.

SUSTAINABLE INVESTMENTS (NET ASSETS)

For the assessment of the **Green, Social, Sustainable and Sustainability-Linked-Bonds**, the Bloomberg sustainable debt indicators are used for screening of company debt securities which have self-reported sustainability features. Considerations such as whether the instrument is classified under recognised market standards (International Capital Markets Association or Climate Bond Initiative) or have third party assurance are important to our assessment.

United Nations Sustainable Development Goals (SDGs) alignment is defined for each investment by meeting at least one of the following three thresholds.

1. Company derives at least 50% of its revenue from goods and services that are related to one of the following nine SDGs: (1) No Poverty, (2) No Hunger, (3) Good Health and Well Being, (4) Quality Education, (6) Clean Water, (7) Affordable and Clean Energy, (9) Industry, Innovation and Infrastructure, (11) Sustainable Cities and Communities, (12) Responsible Consumption and Production.
2. Company invests at least 30% of its capital expenditure in business activities that are related to one of the aforementioned nine SDGs.
3. Company achieves aligned status for operational alignment for at least three out of all seventeen of the SDGs and does not achieve misalignment for any SDG. Evidence is provided by the investee company’s policies, practices and targets addressing such SDGs.

MARKETING COMMUNICATION

GLOSSARY

Alpha: Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

Beta: Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund “cushions” the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund “magnifies” the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

Capitalisation: A company’s stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

Duration: A bond’s duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

FCP: Fonds commun de placement (French common fund).

High yield: A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Investment/net exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset’s exposure (stimulation) or reduce it (hedging).

Modified duration: A bond’s modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio’s value would drop by 2%.

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Rating: The rating measures the creditworthiness of a borrower (bond issuer).

SFDR Fund Classification: Sustainable Finance Disclosure Regulation (SFDR) 2019/2088. EU Act that requires asset managers to classify funds into categories, “Article 8” funds promote environmental and social characteristics, “Article 9” funds have sustainable investments as a measurable objective. In addition to not promoting environmental or social characteristics, “Article 6” funds have no sustainable objectives. For more information, please refer to <https://eur-lex.europa.eu/eli/reg/2019/2088/oj>

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

VaR: Value at Risk (VaR) represents an investor’s maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio’s total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

Yield to Maturity: Yield to Maturity (YTM) is the estimated annual rate of return expected on a bond if held until maturity and assuming all payments made as scheduled and reinvested at this rate. For perpetual bonds, the next call date is used for computation. Note that the yield shown does not take into account the FX carry and fees and expenses of the portfolio. The portfolio’s YTM is the weighted average individual bonds holdings’ YTM within the portfolio.

ESG DEFINITIONS & METHODOLOGY

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see “MSCI ESG Fund Ratings Methodology”, Section 2.3. Updated June 2023. <https://www.msci.com/documents/1296102/34424357/MSCI+ESG+Fund+Ratings+Methodology.pdf>

Principal Adverse Impacts (PAI): Negative, material, or potentially material effects on sustainability factors that result from, worsen, or are directly related to investment choices or advice performed by a legal entity. Examples include GHG emissions and carbon footprint.

Sustainable Investments: The SFDR defines sustainable investment as an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Taxonomy Alignment: In the context of an individual company, taxonomy alignment is defined as the proportion of a company’s revenue that comes from activities that meet certain environmental criteria. In the context of an individual fund or portfolio, alignment is defined as the portfolio-weight weighted average taxonomy alignment of included companies. For more information, please follow this link: https://ec.europa.eu/info/sites/default/files/business_economy_euro/banking_and_finance/documents/sustainable-finance-taxonomy-faq_en.pdf

MAIN RISKS OF THE FUND

INTEREST RATE: Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **CREDIT:** Credit risk is the risk that the issuer may default. **RISK OF CAPITAL LOSS:** The portfolio does not guarantee or protect the capital invested. Capital loss occurs when a unit is sold at a lower price than that paid at the time of purchase. **CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments.

The Fund presents a risk of loss of capital.
