Investment Manager's Report

Global Economic Review

Global economic growth accelerated during the six months ended February 28, 2018. In its January 2018 *World Economic Outlook Update*, the International Monetary Fund ("IMF") said, "Global economic activity continues to firm up. Global output is estimated to have grown by 3.7 percent in 2017, which is 0.1 percentage point faster than projected in the fall and ½ percentage point higher than in 2016. The pickup in growth has been broad based, with notable upside surprises in Europe and Asia. Global growth forecasts for 2018 and 2019 have been revised upward by 0.2 percentage point to 3.9 percent. The revision reflects increased global growth momentum and the expected impact of the recently approved U.S. tax policy changes." From a regional perspective, the IMF estimates 2017 growth in the Eurozone was 2.4 percent, versus 1.8 percent in 2016. Japan's economy was projected to expand 1.8 percent in 2017, compared to 0.9 percent in 2016. Elsewhere, the IMF estimates that overall growth in emerging market¹ countries accelerated to 4.7 percent in 2017, versus 4.4 percent in 2016.

Market Review - Fixed Income²

Global fixed income markets were positive, albeit mixed results, during the reporting period. In the US, short-term Treasury yields³ moved sharply higher as the US Federal Reserve⁴ Board ("Fed") continued to raise interest rates⁵ and reduce its balance sheet. The Fed also announced that it anticipates making three additional rate hikes in 2018. Longer-term Treasury yields also moved higher, especially late in the reporting period, as inflation⁶ ticked up and amid fears that the Fed may become more aggressive in terms of normalizing monetary policy⁷. Longer-term sovereign yields in Europe generally trended higher over the reporting period. Meanwhile, investment-grade⁸ and lower rated corporate bond⁹ prices experienced periods of volatility¹⁰, but were positive overall. Emerging market debt also performed relatively well given synchronized global growth, rising commodity¹¹ prices and the weakening US dollar. The US dollar's weakness was attributed to a number of factors, including uncertainties surrounding future US trade policy, questions regarding new leadership at the Fed and concerns over the expanding US deficit.

Yours sincerely,

Western Asset Management Company Limited

Generally a chargeable event includes any payments of distributions to Shareholders, any encashment, repurchase, redemption, cancellation or transfer of shares and any deemed disposal of shares as described below for Irish tax purposes arising as a result of holding shares in the company for a period of eight years or more. Where a chargeable event occurs, the Company is required to account for the Irish tax thereon.

A chargeable event does not include:

- (i) any transactions in relation to shares held in a recognised clearing system as designated by order of the Revenue Commissioners of Ireland; or
- (ii) a transfer of shares between spouses and any transfer of shares between spouses / civil partners or former spouses / civil partners on the occasion of judicial separation, decree of dissolution and/or divorce; or

No Irish tax will arise in respect of a chargeable event where:

- (a) the shareholder is neither resident nor ordinarily resident in Ireland and it has made the necessary declaration to that effect and the Company is not in possession of any information which would reasonably suggest that the information contained in the declaration is not, or is no longer, materially correct; or
- (b) the shareholder is non-Irish resident and has confirmed that to the Company and the Company is in possession of written notice of approval from the Revenue Commissioners to the effect that the requirement to provide the necessary declaration of non-residence has been complied with in respect of the shareholder and the approval has not been withdrawn; or

13. Fair Value Estimation

The Company adopted the Amendments to FRS 102, "Fair Value Hierarchy Disclosures", which were effective for accounting periods beginning on or after January 1, 2017. These amendments require the Company to categorise its fair value measurements into the levels consistent with the fair value hierarchy set out in International Financial Reporting Standards as adopted for use in the European Union. These amendments did not have any impact on the Funds' financial position or performance. The fair value hierarchy has the following levels:

Level 1 inputs are unadjusted quoted prices in an active market for identical assets or liabilities that the entity can access at the measurement date

Level 2 inputs are inputs other than quoted prices included within Level 1 that are observable (i.e. developed using market data) for the asset or liability, either directly or indirectly

Level 3 inputs are unobservable inputs (i.e. for which market data is unavailable) for the asset or liability.

An investment is always categorised as level 1, 2 or 3 in its entirety. In certain cases, the fair value measurement for an investment may use a number of different inputs that fall into different levels of the fair value hierarchy. In such cases, an investment's level within the fair value hierarchy is based on the lowest level of input that is significant to the fair value measurement. The assessment of the significance of a particular input to the fair value measurement requires judgment and is specific to the investment.

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in these securities.

14. Risks of Loan Participations and Assignments

Securitised loan participations typically will result in the Funds having a contractual relationship only with the lender, not with the borrower. The Funds will have the right to receive payments of principal, interest and any fees to which it is entitled only from the lender selling the participation and only upon receipt by the lender of the payments from the borrower. In connection with purchasing participations, the Funds generally will have no right to enforce compliance by the borrower with the terms of the loan agreement relating to the loan, nor any rights of set-off against the borrower, and the Funds may not directly benefit from any collateral supporting the loan in which it has purchased the participation. As a result, the Funds will assume the credit risk of both the borrower and the lender that is selling the participation. In the event of the insolvency of the lender selling a loan participation, the Funds may be treated as a general creditor of the lender and may not benefit from any set-off between the lender and the borrower.

The Funds may have difficulty disposing of securitised and unsecuritised loan participations or loans. The liquidity of such instruments is limited, and they may be sold only to a limited number of institutional investors. This could have an adverse impact on the value of such securities and on the Funds' ability to dispose of particular participations when necessary to meet its liquidity needs or in response to a specific economic event, such as a deterioration in the creditworthiness of the borrower, and also may make it more difficult to assign a value to the participations or loans for the purposes of valuing the Funds' portfolio and calculating its Net Asset Value.
