This 20% limit will be checked on each rebalancing date of the Benchmark Indicator, in application of the Benchmark Indicator’s calculation method that limits the exposure to each equities of a single issuing entity to 20%, and for which the calculation is carried out by the sponsor or the calculation agent of the Benchmark Indicator. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument or of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

As part of a future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

The Compartment will be mainly invested in securities making up the Benchmark Indicator.

At all times, the Compartment will invest at least 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the agreement on the European Economic Area and that has signed, with France, a tax convention that includes an administrative assistance clause for the purpose of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

Investment in the assets of undertakings for collective investment in transferable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net asset.

As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

3. Off-balance sheet assets (derivative instruments)

On an ancillary basis, the Compartment may use FFIs traded on a regulated market or over the counter.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company’s conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

Pursuant to its investment strategy, the Compartment may use various efficient portfolio management techniques in compliance with Article R214-18 of the French Monetary and Financial Code, including:

Nature of the operations used:

securities lending and borrowing by reference to the Monetary and Financial Code

Nature of the interventions, all operations being limited to the achievement of the management objective:

optimisation of the Compartment’s income

- Maximum proportion of assets under management which may be subjected to securities financing transactions: up to 25% of the Compartment’s assets.

- Expected proportion of assets under management which may be subject to securities financing transactions: 25% of the Compartment’s assets.

For this purpose the management company will appoint Société Générale (hereinafter the “Agent”) to provide the following services in connection with the Compartment’s temporary securities transactions. If such an Agent is used it may be authorised to (i) lend securities, on the Compartment’s behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment’s behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

As a reminder, the Management Company is an entity of the Société Générale group and is therefore linked to the Agent.

The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs/expenses.

These operating costs/expenses, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment’s management company, the Agent and/or other intermediaries that are involved in these transactions.

These direct and indirect operating costs/expenses will be calculated as a percentage of the Compartment’s gross income. Information on direct and indirect operating expenses and on the entities to which these costs/expenses are paid will be provided in the annual report of Sicav Multi Units France.

All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect costs do not increase the Compartment's overall operating costs/expenses they have been excluded from ongoing expenses.

If necessary, the annual report of Sicav Multi Units France will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;
- the identity of the counterparty(ies) involved in these transactions;
- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs or expenses.

When Societe Generale acts as counterparty to all operations constituting efficient portfolio management techniques, situations of conflicts of interest may arise between the Management Company and Societe Generale, such situations are governed by the Management Company's conflict of interest management policy.

8. Financial guarantees

In all cases where the investment strategy used exposes the Compartment to counterparty risk, in particular in connection with temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt to the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to or traded on a regulated market of an EU Member State, on a stock exchange of an OECD Member State or on a stock exchange of another country provided that conditions (a) to (e) (above) are fully complied with and that such equities are included in a first-rate index.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument (FFI)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Risk arising from a lack of perfect replication

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly. The Compartment manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and derivatives. The use of such optimization techniques may increase the ex post tracking error and cause the Compartment to perform differently from that Benchmark Indicator.

- Liquidity risk on a place of listing

The ETF's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Risk related to the use of efficient portfolio management techniques:

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the If the Compartment fails to do so, the Compartment may incur a risk in the event that the value of the guarantees received by the Compartment is insufficient. Compartment would be less than the value of the assets of the Compartment transferred to the counterparty under the EPMT concerned. This risk could materialize in particular in the event of (i) a poor valuation of the securities covered by this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the issuers' credit ratings securities received as collateral and/or (iv) market illiquidity on which the collateral received is listed.

Holders' attention is drawn to the fact that (i) EPMT s could be concluded with Société Générale (an entity of the same name group as the Management Company) and/or (ii) that Société Générale could be appointed as agent of the Compartment in the EPMT framework.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially reached

Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of futures

On an ancillary basis, the Compartment may use forward financial instruments ("FFIs") traded over the counter or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs may involve a range of risks, at the contract level, including (but not limited to) the following: counterparty risk, hedging event, event affecting the Benchmark Indicator, tax regime risk, regulatory risk and liquidity risk. These risks may directly affect an FFI and may lead to an adjustment or even early termination of the FFI's contract, which may affect the net asset value of the Compartment.

Investment in FFIs may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "lever effect" at the level of each transaction. A relatively limited market movement would then have a proportionally very high impact, which may be favourable or unfavourable to the Compartment.

The market value of FFIs is very volatile and can therefore be subject to significant variations.

The Compartment may use over-the-counter FFIs. Over-the-counter transactions may be less liquid than transactions traded on organized markets, where trading volumes are generally higher and prices may be more volatile.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Risk linked to a transaction involving securities comprising the Benchmark Indicator

Should the issuer of a security underlying the index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber wishing to be exposed to the performance of the 60 best-ranked securities that are not part of the CAC Large 60 index.

An investor subscribing to this Compartment wishes to obtain an exposure to the Indonesian equity market.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks. Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

Activity report

The investment objective of the sub-fund is to track the performance of CAC Mid 60 Gross Total Return (Ticker:CM1GR).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor CAC MID 60 (DR) UCITS ETF - Dist	FR0011041334	EUR	3.63% ⁽¹⁾	4.14%		107.41%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index;
- sampling techniques or efficient portfolio management techniques.”

The Tracking Error is 0.0575% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company’s voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company’s Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company’s method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

French Funds (Fonds Communs de Placement – FCP)*, French & Luxembourgish SICAV (*) limited to European issuers.

To prevent excess cost resulting by the voting process, Lyxor votes only where its consolidated holdings represent at least 0.10% of the company's equity capital.

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership. This stake lets us influence companies to improve their ESG practices in the long term.

In terms of engagement, Lyxor joined the Climate Action 100+ initiative, committing itself to asking companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosures) recommendations.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2*)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,
- MSCI and Sustainalytics ESG research to integrate ESG issues,
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

For an optimal voting preparation process and execution Lyxor uses a Proxy Voting Advisor.

Lyxor currently uses the services of ISS (Institutional Shareholder Services) for the implementation of its voting policy.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 38 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 4%
Yellow Flag 10%
Green Flag 86%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2019

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	99%
115	100	76	Scope 1 reported (vs estimated)	26%
			Scope 2 reported (vs estimated)	38%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	1.2%	1.9%
Some efforts	72.0%	96.5%	49.7%
Limited efforts/Information	14.7%	1.7%	0.0%
No effort/No evidence	13.4%	0.6%	48.4%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel
Natural Gas	Nuclear
Renewables	Thermal Coal

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	16%
20-49.9%	0%
50-100%	4%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	8.1%
Energy Efficiency	18.2%
Green Building	11.8%
Pollution Prevention	3.7%
Sustainable Water	2.5%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.1%
Energy Efficiency	0.8%
Green Building	3.9%
Pollution Prevention	0.5%
Sustainable Water	0.0%

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

In order to prevent the excessive costs inherent in the voting process, Lyxor attends general meetings when the consolidated holding represents more than 0.10% of the company's share capital. This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	59
Number of Voted Meetings	3
Participation rate at General Meetings	5.1%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Routine/Business	93.3%	6.7%	0.0%
Non-Salary Comp.	35.0%	65.0%	0.0%
Directors Related	85.7%	14.3%	0.0%
Capitalization	66.7%	33.3%	0.0%
Reorg. and Mergers	0.0%	100.0%	0.0%

Breakdown by country

In 2019, the Lyxor' voting scope was the European issuers.

The data details the geographical distribution of the General Meetings at which the Lyxor CAC MID 60 (DR) UCITS ETF fund participated during the financial year.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

<https://www.lyxor.com/politiques>

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at www.lyxor.com

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

As at 31 October 2019, the CIU does not have a securities position subject to the SFTR regulations, i.e. repurchase agreements, securities or commodities lending/borrowing, purchase/resale or sale/purchase transactions, margin call lending transactions and global income swap (TRS) agreements.

However, during the financial year, the CIU had recourse to securities lending/borrowing transactions subject to the SFTR regulations which generated income in the amount of €31,740.92 from which were deducted direct and indirect operating costs/expenses in the amount of €17,091.26 borne by the Management Company and/or the Agent (where applicable).

Efficient portfolio management techniques and derivative financial instruments

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the date of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the net asset value calculation date. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the net asset value calculation date. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities for operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published by the WM Reuters on the same day of the closing date of the Compartment's net asset value.

Posting method for the negotiation fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.
- Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative fees external to the management company, including tax ⁽¹⁾	Net assets	maximum 0.50% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transfer commission	Collection on each transaction	None
Outperformance commission	Net assets	None
Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities	The amount of the transaction	20% maximum for the Management Company 15% maximum for the Agent

appendix

⁽¹⁾ including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

Accounting currency

The Compartment's accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually (*Not certified by the auditor*)

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Class of Dist equities: The Board of directors reserves the right to distribute all or part of the income, one or more times each year.

appendix

Euronext N.V. holds all ownership rights to the Index. Euronext N.V., as well as any direct or indirect subsidiary, does not guarantee, approve or are not involved in any way in the issue and offer of the product. Euronext N.V., as well as any direct or indirect subsidiary, shall not be liable to third parties for any inaccuracy in the data on which the Index is based, for any error, error or omission in the calculation or dissemination of the Index, or for its use in connection with this issue and offer.

Financial accounts	-	-	-	-
Off-balance sheet				
Hedging	-	-	-	-
Other operations	-	-	-	-

3.5 Receivables and Debts: breakdown by type

Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).

Receivables		1,062,449.46
Future currency exchange operations:		
Future purchases of currency		-
Total traded amount of future Sales of currencies		-
Other receivables:		
Deferred settlements sales		1,062,449.46
-		-
-		-
-		-
-		-
Other operations		-
Debts		8,087.79
Future currency exchange operations:		
Future sales of currencies		-
Total traded amount of future Purchases of currencies		-
Other debts:		
Accrued expenses		7,919.65
Miscellaneous debtors and creditors		168.14
-		-
-		-
-		-
Other operations		-

3.6 Shareholders' equity

Equity category issued/redeemed during the fiscal year:	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
EQUITY Dist / FR0011041334	-	-	415,795	70,336,655.75
EQUITY I-EUR / FR0011046754	-	-	-	-
Subscription / redemption commission by equity category:		Amount		Amount
EQUITY Dist / FR0011041334		-		21,100.99
EQUITY I-EUR / FR0011046754		-		-
Retrocessions by equity category:		Amount		Amount
EQUITY Dist / FR0011041334		-		-
EQUITY I-EUR / FR0011046754		-		-
Commissions acquired by the Compartment by equity category:		Amount		Amount
EQUITY Dist / FR0011041334		-		21,100.99
EQUITY I-EUR / FR0011046754		-		-

3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	%
Equity category:	
EQUITY Dist / FR0011041334	0.50
EQUITY I-EUR / FR0011046754	-
Outperformance commissions (variable fees): amount of costs for the year	Amount
Equity category:	
EQUITY Dist / FR0011041334	-
EQUITY I-EUR / FR0011046754	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

3.8 Commitments given and received

- 3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees **None**
3.8.2 Description of the other commitments received and/or given **None**

3.9 Other information

3.9.1	Current value of the financial instruments that are the subject of temporary acquisition:	
	- Financial instruments sold under forward repurchase agreements	-
	- Other temporary operations	-
3.9.2	Current value of the financial instruments comprising security deposits:	
	Financial instruments received as guarantees and not included in the balance sheet:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
	Financial estimates given as guarantees and maintained in their original item:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
3.9.3	Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
	- CIU securities	-
	- Swaps	-

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR EURO OVERNIGHT RETURN UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR EURO OVERNIGHT RETURN UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

The Lyxor Euro Overnight Return UCITS ETF Compartment (the “Compartment”) is an index-based UCITS of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Class of Acc equities: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment's management objective is to replicate the performance of the Solactive Euro Overnight Return Index (the "Benchmark Indicator"), listed in euro (EUR), both upwards and downwards, regardless of its performance, while minimising the tracking error between the Fund's performance and that of its Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.20%.

Benchmark indicator:

The Benchmark Indicator is the Solactive Euro Overnight Return index (gross dividends reinvested) of the “Total Return” type (meaning that it capitalises the interest).

The Benchmark Indicator is calculated and maintained by Solactive AG.

The Benchmark Indicator is calculated from the EONIA (European Overnight Index Average) rate that is the daily reference rate for blank interbank deposits (i.e. without being secured by securities) carried out from day to day in the Euro area. Calculated by the European Central Bank and published by the European Banking Federation, the EONIA rate is the average, weighted in terms of its amounts, of the rates actually traded on the interbank euro money market during the day by a sample of 57 major banks for deposits/loans until the next trading day. It is one of the two benchmark rates for the Euro area money market, with the other being the EURIBOR, that, for its part, covers terms from one week to one year.

The Benchmark Indicator is calculated using the following formula:

Where $IINV[T+1]$ represents the index on the date T+1; $IINV[T]$ is the index on the previous trading day;

$n[T+2,T+3]$, the number of actual days between T+2 and T+3; rE the EONIA fixing published in T between 6:45 p.m. and 7 p.m.

An exhaustive description of the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and respective importance of the components of the Benchmark Indicator are available on the Internet site <https://www.solactive.com>. Additional information can also be found on the site www.euribor.ebf.eu.

The performance monitored is that of the fixing of the Benchmark Indicator determined by Solactive AG.

Benchmark indicator publication

Solactive AG is responsible for the calculation and the diffusion of the value of the Benchmark Indicator. The characteristics of the Benchmark Indicator are available at <https://www.solactive.com>.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Solactive AG director of the Solactive Euro Overnight Return index is registered in the register of directors and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used, describing the measures to be implemented in the event of substantial changes to an index or termination of supply of that index.

Benchmark indicator revisions

Taking into account the distinctive features of the Benchmark Indicator, based uniquely on the EONIA rate, the Benchmark Indicator shall not undergo periodic revisions.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other European securities, from all economic sectors, listed on all markets, including the Euro area securities.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its assets, the UCITS may be invested up to 20% of its assets in debt issued by (i) a State which is not a member of the OECD and/or (ii) an issuing not sovereign entity.

This 20% limit may be increased to 35% for a single bond when this proves to be justified by exceptional market conditions, notably when certain securities are excessively dominant and/or in case of high volatility of a debt issue, and/or in case of a political and/or economic event that has or could have an incidence on the assessment of a debt of an issuing State and/or that could affect a credit rating of an issuing State or any other event likely to affect the liquidity of a security included within the Benchmark Indicator.

Notwithstanding the assumptions of the above paragraph, the securities guaranteed or issued by a single issuer may represent up to 35% of the asset and 100% of the asset if the UCITS hold at least 6 issuances, none of which being superior to 30% of the asset. The relevant securities are financial instruments issued or guaranteed by an OECD Member State, the regional authorities of an EU Member State or a signatory of the agreement on the EEA.

In the present case, the manager intends to primarily use the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, securities of the Euro Area.

The aforementioned securities will be bonds chosen on the basis of criteria:

- of eligibility, in particular:
 - o Senior debt
 - o Fixed maturity
 - o Maximum residual maturity
 - o Minimum issuing amount
 - o Requirement of a minimal threshold in S&P rating or equivalent.
- of diversification, notably:
 - o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
 - o Geographical area,
 - o Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the following Internet site: www.lyxoretf.com. At least 60% of the value of the Compartment's assets corresponds to balance sheet assets with a residual maturity of two years or more.

The investment in undertakings for collective investment in transferable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the Compartment’s net assets. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

The guaranteed securities issued by a single issuer can represent up to 35% of the assets, and 100% of the assets if the UCITS holds at least six issues, none of which exceeds 30% of the assets. The securities are instruments issued or guaranteed by an OECD Member State, the regional authorities of an EU Member State or a signatory of the agreement on the EEA.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment’s assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company’s conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowings

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment’s use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company shall implement a policy for selecting financial intermediaries and counterparties particularly when it enters into total return swaps on the Compartment's behalf.

Financial establishments of an OECD country which have been found to be satisfactory are selected. Such analysis is done on the basis of the Management Company risk department's specific criteria, such as financial stability, rating, exposure, credit spread, type of business, track-record, etc.

The list of authorised counterparties shall be reviewed periodically or in the event of a market shock or decline in the selection criteria. This involves various departments (investment management, risks, operations, and support staff) of the Management Company. The counterparties selected are monitored regularly in accordance with the Management Company's Execution Policy. An escalation procedure to Senior Management of the Management Company and/or the Risk Department of the Société Générale group is provided in the event of an incident.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Interest rate risk

The Compartment is exposed to any evolution of the money markets following the decision of a central bank. Therefore, should the interest rates reach a level below the level of management fees and other structural costs, the Compartment's net asset value could decrease.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses future financial instrument (“FFI”) traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment’s net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment’s manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment’s underlyings can affect the Compartment’s tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment’s net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment’s underlyings, the Compartment’s net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment’s net asset value can also be affected.

If the event persists, the Compartment’s manager will decide on measures having to be adopted, which can have an impact on the Compartment’s net asset value.

“Events affecting the Benchmark Indicator” are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market’s actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the Benchmark Indicator is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the Benchmark Indicator makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this index or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator’s components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator’s performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction (“ST”), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment’s counterparty in a future financial instrument), the Compartment’s net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST’s treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the money market within the Euro Area.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for one year, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one’s investments so as to avoid an exposure only to this Compartment’s risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than one year. This minimum term must notably be considered in view of the quotation ranges, brokerage fees and possible stock market tax borne by the investor.

“U.S. Persons” (as defined below - see “COMMERCIAL ORDER INFORMATION”) may not invest in the Compartment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment’s complete prospectus and the latest annual and periodic documents are sent within one week of the bearer’s written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2018.*
- *Compartment creation date: 6 September 2018.*

Activity report

The investment objective of the sub-fund is to track the performance of the Solactive Euro Overnight Return Index (Ticker:SOEUONRT).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor Euro Overnight Return UCITS ETF – Acc	FR0010510800	EUR	-0.59% ⁽¹⁾	-0.38%		4.83%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index”.

The Tracking Error is 0.0035% for the sub-fund. The Tracking Error target for the year was 0.2%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Until 20 August 2019 the Fund's Benchmark Indicator was FTSE MTS Eonia Investable Index, from 21 August 2019 the Benchmark Indicator is Solactive Euro Overnight Return Index.

Index Linked Swap's counterparty is: Société Générale.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,
- MSCI and Sustainalytics ESG research to integrate ESG issues,
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will provide investors with an indication of their current financed emissions.

After carefully analyzing the Indicators and data available to take into account and measure the transition risks that climate change poses to Issuers, Lyxor will not report on those matters at this time. We will work with our external providers in order to enhance our knowledge to report and better reflect the risk of transition in the coming years.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:
<https://www.lyxor.com/politiques>

Transparency of securities financing operations and reuse of financial instruments SFTR regulation
(Accounting currency of the CIU)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

Securities lending	
% of loaned assets	-

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.

	Securities lending⁽¹⁾	Securities borrowing⁽²⁾	Repo operations⁽³⁾	Reverse repo operations⁽⁴⁾	TRS⁽⁵⁾
Absolute value	-	-	-	-	871,761,428.65
% of assets under management	-	-	-	-	100.00

⁽¹⁾ The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

⁽²⁾ The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

⁽³⁾ The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

⁽⁴⁾ The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

⁽⁵⁾ The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published by the fixing WM Reuters on the day of the Compartment's net asset value date.

Posting method for the negotiation fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company. For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.15% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

This breakdown is given for the main listing or assessment currencies, with the exception of the currency for the keeping of the accounts.

By main currency	-	-	-	Other currencies
Assets	-	-	-	-
Deposits	-	-	-	-
Equities and similar securities	-	-	-	-
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
Liabilities	-	-	-	-
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	-	-	-	-
Off-balance sheet	-	-	-	-
Hedging	-	-	-	-
Other operations	-	-	-	-

3.5 Receivables and Debts: breakdown by type

Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).

Receivables	32,330,316.05
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Account receivable	32,322,092.32
Deferred settlements sales	8,223.73
-	-
-	-
-	-
Other operations	-
Debts	32,408,282.55
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Deferred settlements purchases	32,330,316.05
Accrued expenses	77,966.50
-	-
-	-
-	-
Other operations	-

LYXOR EURO OVERNIGHT RETURN UCITS ETF
(compartment of the Multi Units France Sicav)

3.6 Shareholders' equity

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	8,158,000	858,264,280.30	8,905,000	936,912,942.00
Subscription / redemption commission		-		-
Retrocessions		-		-
Commissions acquired by the Compartment		-		-

3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	0.10
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

3.8 Commitments given and received

- 3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees **None**
3.8.2 Description of the other commitments received and/or given **None**

3.9 Other information

3.9.1 Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2 Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- CIU securities	-
- Swaps	490,596.36

LYXOR EURO OVERNIGHT RETURN UCITS ETF
(compartment of the Multi Units France Sicav)

3.12 Table of the profit and loss and other characteristic elements of the Compartment during the last 5 fiscal years

Currency	31.10.2019	31.10.2018	29.09.2017	30.09.2016	30.09.2015
EUR					
Net assets	871,761,428.65	955,665,968.72	496,148,467.00	597,727,102.49	611,109,795.45
Number of outstanding equities	8,316,000	9,063,000	4,678,000	5,610,000	5,716,000
Net asset value	104.8294	105.4469	106.0599	106.5467	106.9121
Unit distribution on capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to unit holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	1.13	-0.39	-1.62	-0.11	2.54

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding units on that date.

⁽²⁾ The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.
Compartment creation date: 6 September 2018.

4. Inventory as of 31.10.2019

APPENDIX TO THE REPORT
intended for Swiss subscribers

This appendix makes the annual report compliant with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment
France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Fund, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale, Paris, Zurich Branch, Talacker 50, PO Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the collective investment: 31-Oct.

Management commission of the UCITS 0.10 % tax included

Average fortune of the Fund for the period from 01/11/18 to 31/10/19: 893,905,167.25

Excerpt of the profit and loss statement

Expenses in euros	Annual report 31/10/2018	Half-yearly report 30/04/2019	Annual report 31/10/2019
Management commission of the fund	736,188.79	434,379.75	893,493.70
Performance fee to be paid to the manager of collective investments of capital	0.00	0.00	0.00

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR WORLD WATER UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR WORLD WATER UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

International equities.

At least 60% of the Lyxor World Water UCITS ETF Compartment (the “Compartment”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

The Board of directors reserves the right to distribute all or part of the amounts available for distribution, one or more times each year.

Management objective:

The Compartment’s management objective is to replicate, downwards and upwards, the evolution of the World Water Index CW Net Total Return index (the “Benchmark Indicator”), listed in euros (EUR), while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

Benchmark Indicator:

The Benchmark Indicator is the World Water Index CW Net Total Return index (net dividends reinvested, which means that the Benchmark Indicator's performance includes the net dividends paid by its underlying equities) (“Cap-Weighted”).

The Benchmark Indicator is an equity index calculated by DOW JONES, maintained by SAM (Sustainable Asset Management) and published by the SOCIÉTÉ GÉNÉRALE group.

The Benchmark Indicator is a reference index dedicated to the water sector.

The Benchmark Indicator is made up of securities listed on the markets in Europe, America, Asia and Oceania, of which the bulk of their incomes comes from one of the three following business sectors:

- Infrastructures: supply of pipes, pumps and meters, and engineering companies;
- Water treatment products and equipment: producers of equipment and technologies for water disinfection, filtration and desalination;
- Distribution and management of water hydraulic networks: companies that distribute water and manage hydraulic treatment units and networks in order to provide overall management of the water cycle.

The weighting of the Benchmark Indicator is calculated on the basis of the floating capitalisations of each of the components and no component can represent more than 10% of the Benchmark Indicator.

The Benchmark Indicator is analysed and re-balanced every three months, in March, June, September and December. The Benchmark Indicator is calculated and published in real time.

The monitored performance is that of the Benchmark Indicator closing prices.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available on the Internet site: www.sgindex.com

Benchmark indicator publication

The Benchmark Indicator is calculated daily using the official closing prices of the exchanges where the constituent stocks are listed. The Benchmark indicator is also calculated in real time every stock exchange trading day.

The Benchmark Indicator's closing price is available on the Internet site: www.sgindex.com

In accordance with Article 52 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Société Générale director of the World Water Index CW Net Total Return index has until 01.01.2020 to apply for an approval or a registration, if applicable.

As of the date of the last update of this prospectus, the administrator of the Reference Index has not yet been registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the GSP has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

Benchmark indicator revision and composition

The Benchmark Indicator is revised quarterly to account for the changes that affect the stocks eligible for the Benchmark Indicator. Major changes to a company's share capital (e.g. resulting from mergers, acquisitions, etc.) may be implemented in real time.

The exact composition of the Benchmark Indicator, the effective weights of its components and the rules that govern the revision of its composition are available on the Internet site: www.sgindex.com

The rebalancing frequency indicated above does not affect the cost of implementing the Investment strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit will be checked on each rebalancing date of the Benchmark Indicator, in application of the Benchmark Indicator's calculation method that limits the exposure to each equity of a single issuing entity to 20%, and for which the calculation is carried out by the sponsor or the calculation agent of the Benchmark Indicator. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument or of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

- o Subordination to the main market indices or to the Benchmark Indicator,
 - o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
 - o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).
- of diversification, notably:
- o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
 - o Geographical area,
 - o Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership. As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (in compliance with the description contained in this section's paragraph 1 above).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowings

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;

(ii) invested in high-quality State bonds;

(iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;

(iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into total return swaps on behalf of the Compartment.

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company's Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company's relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company's Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company's senior management and/or to the Société Générale group's Risk department.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Risk related to low diversification of the Benchmark Indicator

The Benchmark Indicator to which the investors are exposed covers a given region, sector or strategy and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to such an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this index or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Exchange risk linked to the Benchmark Indicator

The Compartment is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Indicator could be listed in a currency other than that of the Benchmark Indicator, or be derivatives of securities listed in a currency other than that of the Benchmark Indicator. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor subscribing to this Compartment wishes to obtain an exposure to the equity market with companies that have, as their primary source of income, activities related to water business (infrastructure, water treatment products and equipment, distribution and management of water hydraulic networks).

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2018.*
- *Compartment creation date: 6 September 2018.*

Activity report

The investment objective of the sub-fund is to track the performance of World Water Total Return Index CW EUR (Ticker: WOWAXC).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor World Water UCITS ETF - Dist	FR0010527275	EUR	29.84% ⁽¹⁾	30.92%		165.13%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index”.

The Tracking Error is 0.0169% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy.
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy.
- MSCI and Sustainalytics ESG research to integrate ESG issues.
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

For the swap based vehicles, the financial exposition via the derivative product is reported on a monthly basis.

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to 100% of the fund holdings.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

LYXOR WORLD WATER UCITS ETF
(compartment of the Multi Units France Sicav)

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

Portfolio ESG Rating as of October 2019

ESG score	Environmental	Social	Governance
5.9	5.4	5.7	6.7

Portfolio rated 100%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 3%
Yellow Flag 9%
Green Flag 87%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2019

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
179	310	160	Scope 1 reported (vs estimated)	94%
			Scope 2 reported (vs estimated)	86%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	9.7%	0.0%	13.2%
Some efforts	67.8%	93.9%	41.8%
Limited efforts/information	14.4%	3.8%	11.8%
No effort/No evidence	8.2%	2.3%	33.2%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The raw data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

7.8%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel
Natural Gas	Nuclear
Renewables	75.6%
Thermal Coal	24.4%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	71%
20-49.9%	23%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	26.5%
Energy Efficiency	26.1%
Green Building	0.0%
Pollution Prevention	15.7%
Sustainable Water	81.5%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.4%
Energy Efficiency	0.5%
Green Building	0.0%
Pollution Prevention	0.7%
Sustainable Water	14.7%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

LYXOR WORLD WATER UCITS ETF
(compartment of the Multi Units France Sicav)

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value.

When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Compartment's net asset value date.

Posting method for the negotiation fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative fees external to the management company including tax ⁽¹⁾	Net assets	maximum 0.60% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transfer commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually (*Not certified by the auditor*)

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

The Board of directors reserves the right to capitalise and/or distribute all or part of the amounts available for distribution, one or more times each year.

appendix

The World Water Index CW Net Total Return index (Wowax) is calculated by Dow Jones Indexes, a department of the company Dow Jones & Company, Inc. ("Dow Jones") and compiled by the SAM ("SAM") group. 3.5 Receivables and Debts: breakdown by type

Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).

Receivables	69,059,944.20
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Deferred settlements sales	62,424,505.61
Account receivable	6,635,438.59
-	-
-	-
-	-
Other operations	-
Debts	69,393,335.33
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Deferred settlements purchases	69,059,944.21
Accrued expenses	333,391.12
-	-
-	-
-	-
Other operations	-

3.6 Shareholders' equity

Equity category issued/redeemed during the fiscal year:	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
EQUITY Dist / FR0010527275	5,957,099	229,419,082.92	2,578,100	94,368,872.27
Subscription / redemption commission by equity category:		Amount		Amount
EQUITY Dist / FR0010527275		-		-
Retrocessions by equity category:		Amount		Amount
EQUITY Dist / FR0010527275		-		-
Commissions acquired by the Compartment by equity category:		Amount		Amount
EQUITY Dist / FR0010527275		-		-

3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	%
Equity category:	
EQUITY Dist / FR0010527275	0.60
Outperformance commissions (variable fees): amount of costs for the year	Amount
Equity category:	
EQUITY Dist / FR0010527275	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

3.8 Commitments given and received

- 3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees **None**
 3.8.2 Description of the other commitments received and/or given **None**

3.9 Other information

3.9.1	Current value of the financial instruments that are the subject of temporary acquisition:	
	- Financial instruments sold under forward repurchase agreements	-
	- Other temporary operations	-
3.9.2	Current value of the financial instruments comprising security deposits:	
	Financial instruments received as guarantees and not included in the balance sheet:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
	Financial estimates given as guarantees and maintained in their original item:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
3.9.3	Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
	- CIU securities	-
	- Swaps	956,811.53

3.10 Allocation of the profit and loss table *(in the Compartment accounting currency)*

Net asset value	41.6162	32.596	34.7002	36.0021	35.1382
Unit distribution on net capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)*	0.65	-	0.66	0.60	0.76
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation*	0.17	0.53	-2.80	-1.91	3.49

* The amounts of the unit distribution, the unit capitalisation and the tax credits are indicated in the accounting currency of the Compartment. The unit capitalisation corresponds to the profit or loss and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding equities on that date.

4. Inventory as of 31.10.2019

APPENDIX TO THE REPORT
intended for Swiss subscribers

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment
France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Compartment's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Compartment, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale, Paris, Zurich Branch, Talacker 50, PO Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the fund: 31-Oct.

UCITS management commission: 0.60 % including tax

Average assets of the fund for the period from 01/11/18 to 31/10/19: 564,989,428.23

Excerpt from the income statement

Expenses in euros	Annual report 31/10/2018	Half-yearly report 30/04/2019	Annual report 31/10/2019
Fund management commission	1,040,493.71	1,526,300.81	3,390,601.86
Performance fee to be paid to the manager of collective investments of capital	0.00	0.00	0.00
Depository bank commission	0.00	0.00	0.00
Other expenses	0.00	0.00	0.00
Taxes	0.00	0.00	0.00
Total operating expenses	1,040,493.71	1,526,300.81	3,390,601.86

Calculation of the TER for 12 months, annualised, from 01/11/18 to 31/10/19:

TER, including performance fee

$$(3,390,601.86 / 564,989,428.23) * 100$$

TER 0.60 %

Performance fee as a share in percentage of the net average assets:

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification

The Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF Compartment (the “Compartment”) is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution

Class of Acc equities: Capitalisation of all the amounts available for distribution.

Management objective

The Compartment’s management objective is to obtain an inverse exposure, with double daily leverage, upwards or downwards, to the European equity market while reproducing the evolution to the EURO STOXX 50[®] Daily Double Short benchmark index (the “Benchmark indicator”), and while insofar as possible minimising the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

Benchmark indicator

The Benchmark Indicator is the EURO STOXX 50[®] Daily Double Short strategy index (gross dividends reinvested, which means that the Benchmark Indicator's performance includes the gross dividends paid by its underlying equities).

The Benchmark Indicator is a strategy index defined by the supplier of international indices Stoxx Ltd.

The Benchmark Indicator offers a daily inverse exposure, upwards or downwards, to the evolution of the Euro Stoxx 50[®] Total Return index (the “Parent Index”), with double leverage. As such, in case of a decline of the Parent Index over a given day, the Compartment’s net asset value will increase twofold over that same day and, in case of an increase of the Parent Index over a given day, the Compartment’s net asset value will drop twofold over that same day and the shareholders will not benefit from any increase of this Parent Index.

The Parent Index consists of the 50 largest securities coming from countries member of the Euro area. These securities have been selected for their market capitalisation, liquidity and sector-based representativeness. The Parent Index strives to maintain a weighting per country and per economic sector that, insofar as possible, reflects the economic structure of the Euro area.

The daily performance of the Benchmark Indicator is equal: to twice the inverse daily performance of the Parent Index, plus interest (EONIA) collected each day on three times the valuation of the closing price of the Benchmark Indicator and less the costs resulting from the short sale of the securities comprising the Parent Index.

It is therefore an index that represents a strategy of taking short positions with double daily leverage on the Parent Index.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition of the Benchmark Indicator components are available on the Internet site: http://www.stoxx.com/download/indices/rulebooks/stoxx_strategy_guide.pdf

Benchmark indicator publication

The Benchmark Indicator's closing price is available on Internet site: www.stoxx.com

In accordance with Article 52 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Stoxx Ltd director of the EURO STOXX 50® Daily Double Short benchmark index has until 01.01.2020 to apply for approval or registration, if applicable.

As of the date of the last update of this prospectus, the administrator of the Reference Index has not yet been registered on the register of directors and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the reference indices used, describing the measures to be implemented in the event of changes to an index or discontinuance of the provision of that index.

Benchmark indicator revision and composition

The composition of the Benchmark Indicator depends on the revision of the Parent Index which occurs annually in September. The exact composition and the revision rules of the Benchmark Indicator are published by Stoxx Ltd and are available on the Internet site: www.stoxx.com/indices. The rebalancing frequency indicated above does not affect the cost of implementing the Investment strategy.

Investment strategy

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

- o Subordination to the main market indices or to the Benchmark Indicator,
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
- o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

- of diversification, notably:

- o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- o Geographical area,
- o Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

The investment in undertakings for collective investment in transferable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Compartment’s assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (in compliance with the description contained in this section’s paragraph 1 above).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including forward financial instruments other than index-linked swaps.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.

- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company’s conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowings

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment’s use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into total return swaps on behalf of the Compartment.

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company's Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company's relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company's Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company's senior management and/or to the Société Générale group's Risk department.

Risk profile

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk of daily readjustment of the leverage

Investors are inversely and doubly exposed to the fluctuations affecting the price or level of the Parent Index on a daily basis. In particular, any appreciation of the underlying market will be inversely amplified and will result in an even greater depreciation of the Compartment's net asset value. The daily readjustment of the exposure shown in the formula of the underlying "double short" strategy index implies that, over a period of more than one trading day, the Compartment's performance will not be equal to twice to the inverse performance of the Parent Index.

For example, if the Parent Index appreciates by 10% on one trading day then depreciates by 5% on the next trading day, the ETF will depreciate in all, after these two days (and before deduction of the applicable fees), by 12%, while the Parent Index will have appreciated by 4.5% over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive trading days, it will have depreciated by a total of 9.75%, while the ETF will have appreciated (before deduction of the applicable fees) by 21% over the same period.

Negative scenario 1

Case in which the resulting negative leverage is greater than 2 within the scenario of an increase of the Parent Index

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	10%	110	-20%	80	x-2
Day 2	-5%	104.5	10%	88	x-2
Whole period	4.50%		-12.00%		x-2.67

Negative scenario 2

Case in which the resulting negative leverage is less than 2 within the scenario of a decline of the Parent Index

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	-10%	90	20%	120	x-2
Day 2	6%	95.4	-12%	105.6	x-2
Whole period	-4.60%		5.60%		x-1.22

Moreover, it is possible that over an observation period of more than one day and in case of strong volatility of the Parent Index over this period, the Compartment's net asset value will decline even if the Parent Index also posts a decline over this same period.

Reverse leverage scenario:

Case in which the induced leverage is positive over the period

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	5%	100	-10%	100	x-2
Day 2	-5%	99.75	10%	99	x-2
Whole period	-0.25%		-1.00%		x4

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the index" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing for this Compartment wishes to obtain an inverse exposure to the upward or downward evolution of the European equity markets with double daily leverage.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitration product, this Compartment could not be suitable to investors who wish to make a mid- or long-term investment. "U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

Activity report

The investment objective of the sub-fund is to track the performance of EURO STOXX 50® Daily Double Short (Ticker: SX5T2S).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF - Acc	FR0010424143	EUR	-32.69% ⁽¹⁾	-32.07%		-92.41%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.0371% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Due to the investment policy of this fund, Lyxor will not disclose any metrics in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

<https://www.lyxor.com/politiques>

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the WM Reuters on the same day of the Compartment's net asset value date.

Posting method for the negotiation fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative fees external to the management company including tax ⁽¹⁾	Net assets	maximum 0.60% per year including tax
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

Unit tax credit transferred to unit holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	-2.99	2.50	7.67	6.06	-7.74

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding units on that date.

⁽²⁾ The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.
Compartment creation date: 6 September 2018.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Equities from eurozone countries.

At least 60% of the Lyxor EURO STOXX 50 (2x) Daily Leverage UCITS ETF Compartment (the “Compartment”) is permanently exposed in one or several markets of equities that have been issued in one or several eurozone countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Class of Acc equities: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment’s management objective is to obtain an exposure with a daily x2 leverage, upwards or downwards, to the European equities market while reproducing the evolution of the EURO STOXX 50[®] Daily Leverage Net Total Return benchmark index (the “Benchmark indicator”), and while insofar as possible minimising the tracking error between the Compartment’s performances and those of the Benchmark indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

Benchmark indicator:

The benchmark indicator is the EURO STOXX 50[®] Daily Leverage Net Total Return strategy index, (net dividends reinvested, which means that the Benchmark Indicator's performance includes the net dividends paid by its underlying equities), listed in Euro.

The Benchmark Indicator is a strategy index defined by the supplier of international indices Stoxx Ltd. It is calculated by Deutsche Börse AG.

The Benchmark Indicator is a strategy index that reflects the evolution of the EURO STOXX 50[®] Index (the "Parent Index") with a daily leverage effect of x2. The daily performance of the Benchmark Index is equal to twice the daily performance of the Parent Index, less the borrowing costs required to obtain the 2x leverage. Thus, when the Parent Index increased by 2% on a trading day, the Reference Index increased by 4% on the same trading day, less borrowing costs. Conversely, in the event of a 2% decrease in the Parent Index on a trading day, the Benchmark Index decreases by 4% on the same trading day, less borrowing costs.

The Parent Index is composed of the 50 largest stocks in the Eurozone member countries. These stocks are selected for their market capitalization, liquidity and sector representativeness. The Parent Index strives to respect a weighting by country and by economic sector that reflects as much as possible the economic structure of the Euro zone.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator’s components will be available on the following Internet site: www.stoxx.com/indices.

The monitored performance is that of the closing prices of the index in Euro.

Benchmark indicator publication

The closing price of the Benchmark Indicator is available on the Internet site: www.stoxx.com/indices

In accordance with Article 52 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Stoxx Ltd director of the EURO STOXX 50® Daily Leverage Net Total Return benchmark index has until 01.01.2020 to request approval or registration, if applicable.

As of the date of the last update of this prospectus, the administrator of the Reference Index has not yet been registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the GSP has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

Benchmark indicator revision and composition

The Benchmark Indicator is not revised since it depends on the revision of the Parent Index, which occurs annually, in September.

The exact composition of the Benchmark Indicator and the rules for its revision published by Stoxx Ltd. are available on the Internet site: www.stoxx.com/indices. The above-mentioned rebalancing frequency has no impact on the costs within the framework of the implementation of the Investment strategy.

Advantages of the “leveraged” strategy

The "Leveraged" strategy (with a leverage effect) is a dynamic strategy that is applied to the Benchmark Indicator.

By borrowing securities to carry out the strategy, it enables investors to double the effect of their investment, on a daily basis, in comparison with a "single" investment in the Parent Index on that day. If the Benchmark Index rises, the gains over a given trading day are twice as much as obtained with a “single” investment in the Parent Index over that day. Conversely, if the Benchmark Index falls, the loss over a given trading day will be twice as much, due to the multiplier effect of the leverage. This multiplier effect also applies to the risks of this strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

The Compartment will invest permanently at least of 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the treaty on the European Economic Area and that has signed with France a tax agreement containing an administrative assistance clause for the purposes of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, equities of countries of the Euro Area (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Indicator,
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

- of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- Geographical area,
- Sector.

For more information on the eligibility and diversification criteria mentioned above, including the list of eligible indices, investors are invited to consult the Internet site www.lyxoretf.com

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (in compliance with the description contained in this section's paragraph 1 above).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including forward financial instruments other than index-linked swaps.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowings

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

The financial guarantees received on another form than cash will not be sold, reinvested or pledged.

The guarantees received in cash will be, at the manager discretion:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into total return swaps on behalf of the Compartment.

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company's Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company's relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company's Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company's senior management and/or to the Société Générale group's Risk department.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

-Risk of daily readjustment of the leverage

Investors are doubly exposed to the fluctuations affecting from one day to the next the price or level of the Parent Index. In particular, any depreciation of the underlying market will be amplified and will result in an even larger depreciation of the net asset value of the Compartment. The daily readjustment shown in the formula of the underlying “leverage” strategy index implies that, over a period of more than one trading day, the Compartment’s performance will not be equal to twice the performance of the Parent Index.

For example, if the Parent Index appreciates by 10% on one business day and then depreciates by 5% on the next trading day, the ETF will have appreciated in all, after these two days (and before deduction of the applicable fees), by 8%, while the Parent Index will have appreciated by 4.5% over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated by a total of 9.75%, while the ETF will have depreciated (before deduction of the applicable fees) by 19% over the same period.

Favourable case upwards

	Parent Index	Benchmark Indicator	Induced leverage
performance day 1	+10%	+20%	x2
performance day 2	-5%	-10%	x2
Global performance for the period	+4.5%	+8%	x1.78

Favourable case downwards

	Parent Index	Benchmark Indicator	Induced leverage
performance day 1	-5%	-10%	x2
performance day 2	-5%	-10%	x2
Global performance for the period	-9.75%	-19%	x1.95

Moreover, it is possible that over an observation period of more than one day and in case of strong volatility of the Parent Index over this period, the Compartment’s net asset value will decline even if the Parent Index also posts an increase over this same period.

Example reverse leverage :

	Parent Index		Benchmark Indicator		Induced leverage
	performance day i	Day i value	performance day i	Day i value	
day 1		100		100	
	20%	120	40%	140	x2
day 2	-20%	96	-40%	84	x2
day 3	30%	124.8	60%	134.4	x2
day 4	-20%	99.84	-40%	80.64	x2
day 5	10%	109.824	20%	96.768	x2
Whole period	+9.82%		-3.23%		x -0.33

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value. "Events affecting the index" are understood to mean the following situations:

- i) The index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said index,

- iv) The supplier of the index makes a significant change to the formula or calculation method of the index (other than a minor modification such as the adjustment of the underlyings of this index or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing for this Compartment wishes to obtain an exposure to the market of securities of large companies of the Euro area.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

Activity report

The investment objective of the sub-fund is to track the performance of the EURO STOXX 50 Daily Lev EUR (Ticker: SX5TL).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor EURO STOXX 50 Daily (2x) Leveraged UCITS ETF - Acc	FR0010468983	EUR	32.11% ⁽¹⁾	31.95%		-33.87%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.3234% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

Index Linked Swap's counterparty is: Société Générale.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533-22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

-The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

-Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),

-A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

Utilities	2.1%	2.1%	1.1%						

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	4%
Orange Flag	41%
Yellow Flag	37%
Green Flag	18%

Climate Risks & Energy Transition

			Scope2 reported (vs estimated)	97%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	12%
Thermal Coal	0%
Natural Gaz	12%
Oil	12%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0032
Oil (MMBOE)	0.0031

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	1 361.4
Gas	1 040.0
Total	2 401.3

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	178.9
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	178.9
Other	2 222.4

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	5.2%	9.5%	16.1%
Some efforts	94.8%	90.5%	76.1%
Limited efforts/Information	0.0%	0.0%	6.9%
No effort/No evidence	0.0%	0.0%	0.8%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The raw data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

11.4%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	21.1%
Liquid Fuel	4.5%
Natural Gas	36.0%
Nuclear	11.9%
Renewables	13.3%
Thermal Coal	13.3%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	24%
20-49.9%	7%
50-100%	0%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF
(compartment of the Multi Units France Sicav)

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

<https://www.lyxor.com/politiques>

Profit and loss (I - II + III - IV +/- V - VI):	641,534.21	195,865.37

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Compartment's net asset value date.

Posting method for the negotiation fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.40% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

(1) including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Class of Acc equities: Capitalisation of all the amounts available for distribution.

APPENDIX TO THE REPORT
intended for Swiss subscribers

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment
France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Fund, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale, Paris, Zurich Branch, Talacker 50, PO Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the collective investment:	31-Oct	
Management commission of the OPCVM	0.40	% including tax
Average assets of the fund for the period from 01/11/18 to 31/10/19:	89,213,321.81	

Excerpt from the income statement

Expenses in euros	Annual report 31/10/2018	Half-yearly report 31/08/2018	Annual report 31/10/2018
Fund management commission	73,149.10	195,307.43	356,614.09
Performance fee to be paid to the manager of collective investments of capital	0.00	0.00	0.00
Depository bank commission	0.00	0.00	0.00
Other expenses	0.00	0.00	0.00
Taxes	0.00	0.00	0.00
Total operating expenses	73,149.10	195,307.43	356,614.09

Calculation of the TER for 12 months, from 01/11/18 to 31/10/19:

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

The Lyxor EURO STOXX 50 Daily (-1x) Inverse UCITS ETF Compartment (the “Compartment”) is an index-based UCITS of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Class of Acc equities: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment’s management objective is to obtain an inverse daily exposure, upwards or downwards, to the European equities market while reproducing the evolution to the EURO STOXX 50[®] Daily Short Benchmark Indicator (the “Benchmark indicator”), and while insofar as possible minimising the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

Benchmark indicator:

The Benchmark Indicator is the EURO STOXX 50[®] Daily Short strategy index, (gross dividends reinvested, which means that the Benchmark Indicator's performance includes the net dividends paid by its underlying equities) listed in Euros (EUR).

The Benchmark Indicator is a strategy index defined by the supplier of international indices Stoxx Ltd.

The Benchmark Indicator offers a daily inverse exposure, upward or downward, to the evolution of the EURO STOXX 50[®] Total Return (the “Parent Index”). As such, in case of a decline of the Parent Index over a given day, the Compartment’s net asset value will increase over that same day and, in case of an increase of the Parent Index over a given day, the Compartment’s net asset value will drop over that same day and the shareholders will not benefit from any increase of this Parent Index.

The Parent Index consists of the 50 largest securities coming from countries member of the Euro area. These securities have been selected for their market capitalisation, liquidity and sector-based representativeness. The Parent Index strives to maintain a weighting per country and per economic sector that, insofar as possible, reflects the economic structure of the Euro area.

The daily performance of the Benchmark Indicator is equal: to the inverse daily performance of the Parent Index, plus interest (EONIA) collected each day on twice the valuation of the closing price of the Benchmark Indicator and less the costs resulting from the short sale of the securities comprising the EURO STOXX 50[®] index.

The Benchmark Indicator is representative of a strategy of taking short positions on the Parent Index.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and on the respective weights of the Benchmark Indicator components are available on the Internet site: www.stoxx.com/indices.

The monitored performance is that of the closing prices of the Benchmark Indicator.

Benchmark indicator publication

The Benchmark Indicator is calculated daily at closing prices using the official closing price of the exchanges where the constituent stocks are listed.

The Benchmark Indicator's closing price is available on Internet site: www.stoxx.com/indices

In accordance with Article 52 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Stoxx Ltd administrator of the EURO STOXX 50® Daily Short benchmark index has until 01.01.2020 to request authorisation or registration, if applicable.

As of the date of the last update of this prospectus, the administrator of the Reference Index has not yet been entered in the register of administrators and reference indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the GSP has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

Benchmark indicator revision and composition

The composition of the Benchmark Indicator depends on the revision of the Parent Index which occurs annually in September. The rebalancing frequency indicated above does not affect the cost of implementing the Investment strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

- o Subordination to the main market indices or to the Benchmark Indicator,
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
- o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

- of diversification, notably:

- o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- o Geographical area,
- o Sector.

For more information on the eligibility and diversification criteria mentioned above, including the list of eligible indices, investors are invited to visit www.lyxoretf.com.

The investment in undertakings for collective investment in transferable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment’s assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company’s conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowings

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment’s use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into total return swaps on behalf of the Compartment.

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company's Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company's relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company's Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company's senior management and/or to the Société Générale group's Risk department.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market.

The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective.

LYXOR EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF
(compartment of the Multi Units France Sicav)

In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk of daily readjustment of the leverage

Investors are inversely exposed to the fluctuations affecting the price or level of the Parent Index on a daily basis.

The daily readjustment shown in the formula of the underlying “short” strategy index implies that, over a period of more than one trading day, the Compartment’s performance will not be equal to the inverse performance of the Parent Index. Investors are indeed under-exposed to volatility.

For example, if the Parent Index appreciates by 10% on one trading day then depreciates by 5% on the next trading day, the ETF will have depreciated in total, after these two days (and before deduction of the applicable fees), by 5.5%, while the Parent Index will have appreciated by 4.5% in total.

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated by a total of 9.75%, while the ETF will have appreciated (before deduction of the applicable fees) by 10.25% over the same period.

Negative scenario 1

Case in which the resulting negative leverage is greater than 1 within the scenario of an increase of the Parent Index

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	10%	100	-10%	100	x-1
Day 2	-8%	101.2	8%	97.2	
Whole period	1.20%		-2.80%		x-2.33

Negative scenario 2

Case in which the resulting negative leverage is less than 1 within the scenario of a decline of the Parent Index

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	-10%	100	10%	100	x-1
Day 2	6%	95.4	-6%	103.4	
Whole period	-4.60%		3.40%		x-0.74

Reverse leverage scenario:

Case in which the induced leverage is positive over the period

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	5%	100	-5%	100	x-1
Day 2	-5%	99.75	5%	99.75	
Whole period	-0.25%		-0.25%		x1

Moreover, it is possible that over an observation period of more than one day and in case of strong volatility of the Parent Index over this period, the Compartment's net asset value will decline even if the Parent Index also posts a decline over this same period.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the index" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

LYXOR EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF
(compartment of the Multi Units France Sicav)

An investor subscribing to this Compartment wishes to obtain an inverse exposure to the upward or downward evolution of the European equity markets.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitration product, this Compartment could not be suitable to investors who wish to make a mid- or long-term investment.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2018.*
- *Compartment creation date: 6 September 2018.*

Activity report

The investment objective of the sub-fund is to track the performance of EURO STOXX 50® Daily Short (Ticker: SX5TS).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor EURO STOXX 50 Daily (-1x) Inverse UCITS ETF - Acc	FR0010424135	EUR	-17.41% ⁽¹⁾	-16.94%		-63.10%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.0167% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533-22-1 and D.533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Due to the investment policy of this fund, Lyxor will not disclose any metrics in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

<https://www.lyxor.com/politiques>

Lyxor's best selection and execution policy

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Compartment's net asset value date.

Posting method for the negotiation fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.40% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

appendix

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Class of Acc equities: Capitalisation of all the amounts available for distribution.

3.12 Table of the profit and loss and other characteristic elements of the Compartment during the last 5 fiscal years

Currency					
EUR	31.10.2019	31.10.2018	30.06.2017	30.06.2016	30.06.2015
Net assets	202,540,298.25	103,492,898.50	132,839,331.74	78,237,000.86	153,249,589.11
Number of outstanding equities	12,925,817	5,454,893	7,330,947	4,106,706	6,268,608
Net asset value	15.6694	18.9724	18.1203	19.051	24.4471
Unit distribution on capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to unit holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	-14.40	5.53	-7.07	11.07	-17.26

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding units on that date.

⁽²⁾ The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 6 September 2018.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification

The Lyxor FTSE MIB Daily (-2x) Inverse (Xbear) UCITS ETF Compartment (the “Compartment”) is an index-based UCITS of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Class of Acc equities: Capitalisation of all the amounts available for distribution.

Management objective

The Compartment’s management objective is to obtain an inverse daily exposure and with a daily x2 leverage, upwards or downwards, to the Italian equity market while reproducing the FTSE MIB Daily Super Short Strategy RT Gross TR strategy index (the “Benchmark indicator”), whatever its evolution, and while insofar as possible minimising the tracking error between the Compartment’s performances and those of the FTSE MIB Daily Super Short Strategy RT Gross TR.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

Benchmark indicator

The benchmark indicator is the FTSE MIB Daily Super Short Strategy RT Gross TR strategy index, (gross dividends reinvested, which means that the Benchmark Indicator’s performance includes the net dividends paid by its underlying equities) listed in Euros.

The Benchmark Indicator is a strategy index defined and maintained by FTSE.

The Benchmark Indicator offers an inverse exposure, adjusted each day, upwards or downwards to the evolution of the Parent Index, with the x2 leverage. As such, in the event of a decrease of the Parent Index on a market day, the Compartment’s net asset value will doubly increase over that same trading day and, in the event of an increase of the Parent Index over a trading day, the Compartment’s net asset value will doubly decline over that trading day and the shareholders will not benefit from the increase of the Parent Index.

The adoption of a short position relative to the Parent Index implies borrowing costs that are part of the method used to calculate the Benchmark Indicator.

As such, the performance of the Benchmark Indicator calculated over a given trading day is equal to twice the inverse performance of the Parent Index on that same trading day, plus the interests (EONIA) collected each day on three times the valuation of the previous closing price of the Benchmark Indicator less the cost of the short position strategy related on that trading day to twice the basket used by the Parent Index.

The Parent Index is an index that is weighted by floating market capitalisation, which measures the evolution of 40 of the largest securities listed on the Borsa Italiana.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and on the respective importance of components of the Benchmark Indicator will be available on the Internet site: <http://www.ftse.com/products/indexmenu>

The monitored performance is that of the closing prices of equities comprising the index.

Benchmark indicator publication

The Benchmark Indicator is calculated on a daily basis at closing prices using the official closing market prices of the stock exchanges where the constituent stocks are listed. The Benchmark indicator is also calculated in real time every day that the Benchmark Indicator is published.

The Benchmark Indicator's closing price is available on the Internet site: <http://www.ftse.com/products/indexmenu>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the FTSE International Limited director of the FTSE MIB Daily Super Short Strategy RT Gross TR benchmark index is registered in the register of directors and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the GSP has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

Benchmark indicator revision and composition

The revision of the Benchmark Indicator's composition depends on the revision of its Parent Index's composition. The composition of the Parent Index is revised quarterly.

The leverage in the Benchmark Indicator computation formula undergoes a daily readjustment. The consequences related to the daily readjustment of the leverage are detailed, for instance, in the Benchmark Indicator and Risk profile sections of the prospectus.

The above-mentioned rebalancing frequency has no impact on the costs within the framework of the implementation of the Investment strategy.

The exact composition of the Benchmark Indicator and its revision rules are available on the Internet site: <http://www.ftse.com/products/indexmenu>

Investment strategy

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit will be checked on each rebalancing date of the Benchmark Indicator, in application of the Benchmark Indicator's calculation method that limits the exposure to each equity of a single issuing entity to 20%, and for which the calculation is carried out by the sponsor or the calculation agent of the Benchmark Indicator. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument or of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

o Subordination to the main market indices or to the Benchmark Indicator,

- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
- o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).
- of diversification, notably:
 - o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
 - o Geographical area,
 - o Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowings

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations.

The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depository. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into total return swaps on behalf of the Compartment.

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company's Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company's relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company's Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company's senior management and/or to the Société Générale group's Risk department.

Risk profile

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected.

Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk of daily readjustment of the leverage

Investors are inversely and doubly exposed to the fluctuations affecting the price or level of the Parent Index on a daily basis. In particular, any appreciation of the underlying market will be inversely increased and will entail an even stronger depreciation of the Compartment’s net asset value. The daily readjustment of the exposure shown in the formula of the underlying “double short” strategy index implies that, over a period of more than one trading day, the Compartment’s performance will not be equal to twice the opposite of the performance of the Parent Index.

For example, if the Parent Index appreciates by 10% on one trading day then depreciates by 5% on the next trading day, the Compartment will be depreciated in all, after these two days (and before deduction of the applicable fees), by 12%, while the Parent Index will be appreciated by 4.5% in all over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive trading days, it will have depreciated by a total of 9.75%, while the Compartment will have appreciated (before deduction of the applicable fees) by 21% over the same period.

Negative scenario 1

Case in which the induced negative leverage is greater than 2 within the scenario of an increase of the Parent Index

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	10%	100	-20%	80	x-2
Day 2	-5%	104.5	10%	88	x-2
Whole period	4.50%		-12.00%		x-2.67

Negative scenario 2

Case in which the induced negative leverage is less than 2 within the scenario of a decline of the Parent Index

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	-10%	100	20%	120	x-2
Day 2	6%	95.4	-12%	105.6	x-2
Whole period	-4.60%		5.60%		x-1.22

Moreover, it is possible that over an observation period of more than one day and in case of strong volatility of the Parent Index over this period, the Compartment's net asset value will decline even if the Parent Index also posts a decrease over this same period.

Inverted leverage scenario: Case in which the resulting leverage is positive over the period

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	5%	100	-10%	100	x-2
Day 2	-5%	99.75	10%	99	x-2
Whole period	-0.25%		-1.00%		x-4

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the index" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an inverse exposure (with a x2 leverage) to the upward or downward evolution of the Italian equity market, i.e. of 40 of the largest securities listed on the Borsa Italiana.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitration product, this Compartment could not be suitable to investors who wish to make a mid- or long-term investment. "U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment

For more details, the complete prospectus can be obtained by requesting it from the management company.

The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2018.*
- *Compartment creation date: 6 September 2018.*

Activity report

The investment objective of the sub-fund is to track the performance of TSE MIB Daily Super Short Strategy RT Gross TR (Ticker:FMIBI2X).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor FTSE MIB Daily (-2x) Inverse (Xbear) UCITS ETF – Acc	FR0010446666	EUR	-41.49% ⁽¹⁾	-40.94%	-93.25%	

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.0436% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533-22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Due to the investment policy of this fund, Lyxor will not disclose any metrics in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

<https://www.lyxor.com/politiques>

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published by the fixing WM Reuters on the day of the Compartment's net asset value date.

Posting method for the negotiation fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.60% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually (*Not certified by the auditor*)

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Class of Acc equities: Capitalisation of all the amounts available for distribution.

annuel

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Equities from countries of the Euro area.

At least 60% of the Lyxor FTSE MIB Daily (2x) Leveraged UCITS ETF Compartment (the “Compartment”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based UCITS of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

The Board of Directors reserves the right to capitalise and/or distribute all or part of the amounts available for distribution, one or more times each year.

Management objective:

The Compartment’s management objective is to obtain an exposure with a daily x2 leverage, upwards or downwards, to the Italian equity market while reproducing the FTSE MIB Daily Leveraged RT Net-of-Tax (Lux) TR strategy index (the “Benchmark Indicator”), whatever its evolution, and while insofar as possible minimising the tracking error between the Compartment’s performances and those of the FTSE MIB Daily Leveraged RT Net-of-Tax (Lux) TR.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

Benchmark indicator:

The benchmark indicator is the FTSE MIB Daily Leveraged RT Net-of-Tax (Lux) TR strategy index, (net dividends reinvested, which means that the Benchmark Indicator's performance includes the net dividends paid by its underlying equities) listed in Euros (EUR).

The Benchmark Indicator is a strategy index defined and maintained by FTSE and Borsa Italiana Spa.

The Benchmark Indicator is a strategy index that reflects the evolution of the FTSE MIB Net Total Return index (the "Parent Index") with a daily leverage effect of x2. The daily performance of the Benchmark Index is equal to twice the daily performance of the Parent Index, less the borrowing costs required to obtain the 2x leverage. Thus, when the Parent Index increased by 2% on a trading day, the Reference Index increased by 4% on the same trading day, less borrowing costs. Conversely, in the event of a 2% decrease in the Parent Index on a trading day, the Benchmark Index decreases by 4% on the same trading day, less borrowing costs.

The Parent Index is an index that is weighted by floating market capitalisation, which measures the evolution of 40 of the largest securities listed on the Borsa Italiana.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and on the respective importance of components of the Benchmark Indicator will be available on the Internet site: <http://www.ftse.com/products/indexmenu>

The methodology for calculating the FTSE MIB Net Net Total Return Index is published on the Internet site:

<http://www.ftse.com/products/indexmenu>

The monitored performance is that of the closing prices of equities comprising the index.

Benchmark indicator publication

The Benchmark Indicator is calculated on a daily basis at closing prices using the official closing market prices of the stock exchanges where the constituent stocks are listed. The Benchmark indicator is also calculated in real time every day that the Benchmark Indicator is published.

The Benchmark Indicator's closing price is available on the Internet site: <http://www.ftse.com/products/indexmenu>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the FTSE International Limited director of the FTSE MIB Daily Leveraged RT Net-of-Tax (Lux) TR benchmark index is registered in the register of directors and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the reference indices used, describing the measures to be implemented in the event of changes to an index or discontinuance of the provision of that index.

Benchmark indicator revision and composition

The revision of the Benchmark Indicator's composition depends on the revision of its Parent Index's composition. The composition of the Parent Index is revised quarterly.

The leverage in the Benchmark Indicator computation formula undergoes a daily readjustment. The consequences related to the daily readjustment of the leverage are detailed, for instance, in the Benchmark Indicator and Risk profile sections of the prospectus.

The exact composition of the Parent Index and the revision rules of its composition and incidentally of the Benchmark Indicator published by Euronext are available on the Internet site: <http://www.ftse.com/products/indexmenu>

The above-mentioned rebalancing frequency has no impact on the costs within the framework of the implementation of the Investment strategy.

Advantages of the "leverage" strategy

The "Leverage" strategy (with a daily leverage effect) is a dynamic strategy that is applied to the Benchmark Indicator. By borrowing securities to carry out the strategy, it enables investors to double the effect of their investment, on a daily basis, in comparison with a "single" investment in the Parent Index. If the Benchmark Index rises, the gains on a given trading day are twice as much as obtained with a "single" investment in the Parent Index. Conversely, in case of a bear market, the loss will be twice as much, on a daily basis, due to the multiplier effect of the leverage. This daily multiplier effect also applies to the risks of this strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit will be checked on each rebalancing date of the Benchmark Indicator, in application of the Benchmark Indicator's calculation method that limits the exposure to each equity of a single issuing entity to 20%, and for which the calculation is carried out by the sponsor or the calculation agent of the Benchmark Indicator. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument or of securities from an economic sector represented by the Benchmark Indicator.

In particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

- o Subordination to the main market indices or to the Benchmark Indicator,
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
- o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

- of diversification, notably:

- o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- o Geographical area,
- o Sector.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (in compliance with the description contained in this section's paragraph above).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowings

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations.

The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by Fund investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into total return swaps on behalf of the Compartment.

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company's Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company's relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company's Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company's senior management and/or to the Société Générale group's Risk department.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the financial management delegatee. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk of daily readjustment of the leverage

Investors are doubly exposed to the fluctuations affecting the price or level of the Parent Index on a daily basis. In particular, any depreciation of the underlying market will be increased and will entail an even stronger depreciation of the Compartment's net asset value. The daily readjustment of the exposure shown in the formula of the underlying "leveraged" strategy index implies that, over a period of more than one trading day, the Compartment's performance will not be equal to twice the performance of the Parent Index. For example, if the Parent Index appreciates by 10% on one trading day then depreciates by 5% on the next trading day, the Compartment will be depreciated in all, after these two days (and before deduction of the applicable fees), by 8%, while the Parent Index will be appreciated by 4.5% in all over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated by a total of 9.75%, while the Compartment will have appreciated (before deduction of the applicable fees) by 19% over the same period.

Negative scenario 1

Case in which the induced leverage is greater than 2 within the scenario of a decline of the Parent Index

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	10%	100	20%	100	x2
Day 2	-11%	110	-22%	120	
		97.9		93.6	x2
Whole period	-2.10%		-6.40%		x3.05

LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF
(compartment of the Multi Units France Sicav)

Negative scenario 2

Case in which the induced leverage is less than 2 within the scenario of an increase of the Parent Index

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	-5%	95	-10%	90	x2
Day 2	6%	100.7	12%	100.8	x2
Whole period	0.70%		0.80%		x1.14

Moreover, it is possible that over an observation period of more than one day and in case of strong volatility of the Parent Index over this period, the Compartment's net asset value will decline even if the Parent Index also posts an increase over this same period.

Inverted leverage scenario:

Case in which the resulting leverage is negative over the period

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	20%	120	40%	140	x2
Day 2	-16%	100.8	-32%	95.2	x2
Whole period	0.80%		-4.80%		x-6

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the index" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the upward or downward evolution of 40 of the largest securities listed on the Borsa Italiana.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The recommended minimum investment period is at least 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2018.*
- *Compartment creation date: 6 September 2018.*

Activity report

The investment objective of the sub-fund is to track the performance of FTSE MIB Daily Leveraged RT Net-of-Tax (Ticker:FMIBL2X).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor FTSE MIB Daily (2x) Leveraged UCITS ETF – Dist	FR0010446658	EUR	46.72% ⁽¹⁾	47.06%	-64.05%	

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.4899% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533-22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

-The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

-Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),

-A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 3%
Orange Flag 32%
Yellow Flag 18%
Green Flag 46%

(compartment of the Multi Units France Sicav)

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2019

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	99%
360	247	331	Scope 1 reported (vs estimated)	99%
			Scope2 reported (vs estimated)	84%
			Scope 1& 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	25%
Thermal Coal	0%
Natural Gaz	25%
Oil	25%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated In Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0062
Oil (MMBOE)	0.0060

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	2 551.9
Gas	1 992.1
Total	4 544.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	4 544.0

LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF
(compartment of the Multi Units France Sicav)

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	18.0%	0.0%	29.3%
Some efforts	72.6%	93.5%	50.0%
Limited efforts/information	3.0%	3.0%	4.1%
No effort/No evidence	6.4%	3.4%	16.6%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

26.6%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	24.3%
Liquid Fuel	9.0%
Natural Gas	22.7%
Nuclear	8.5%
Renewables	12.2%
Thermal Coal	23.3%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	36%
20-49.9%	0%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	29.9%
Energy Efficiency	21.8%
Green Building	0.0%
Pollution Prevention	0.9%
Sustainable Water	2.9%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	1.5%
Energy Efficiency	0.9%
Green Building	0.0%
Pollution Prevention	0.0%
Sustainable Water	0.1%

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

Transparency of securities financing operations and reuse of financial instruments SFTR regulation
(Accounting currency of the CIU)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

Securities lending	
% of loaned assets	-

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.

	Securities lending⁽¹⁾	Securities borrowing⁽²⁾	Repo operations⁽³⁾	Reverse repo operations⁽⁴⁾	TRS⁽⁵⁾
Absolute value	-	-	-	-	142,974,498.90
% of assets under management	-	-	-	-	100.00

⁽¹⁾ The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

⁽²⁾ The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

⁽³⁾ The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

⁽⁴⁾ The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

⁽⁵⁾ The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

2. Concentration data

2.1. The ten biggest issuers of guarantees for all types of securities financing operations and total return swaps (breakdown of the volumes of guarantees and raw materials received, with the names of the issuers).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published by the fixing WM Reuters on the day of the Compartment's net asset value date.

Posting method for the negotiation fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.60% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Off-balance sheet				
Hedging	-	-	-	-
Other operations	-	-	-	-

3.5 Receivables and Debts: breakdown by type

Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).

Receivables	-
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
-	-
-	-
-	-
-	-
-	-
Other operations	-
Debts	70,000.57
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Accrued expenses	70,000.57
-	-
-	-
-	-
-	-
Other operations	-

(compartment of the Multi Units France Sicav)

3.6 Shareholders' equity

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	8,830,900	56,591,855.70	13,632,400	94,564,281.45
Subscription / redemption commission		-		-
Retrocessions		-		-
Commissions acquired by the Compartment		-		-

3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	0.60
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

3.8 Commitments given and received

- 3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees **None**
3.8.2 Description of the other commitments received and/or given **None**

3.9 Other information

3.9.1 Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2 Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- CIU securities	-
- Swaps	143,044,501.04

LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF
(compartment of the Multi Units France Sicav)

3.12 Table of the profit and loss and other characteristic elements of the Compartment during the last 5 fiscal years

Currency					
EUR	31.10.2019	31.10.2018	29.09.2017	30.09.2016	30.09.2015
Net assets	142,974,498.90	133,582,257.74	307,284,440.54	235,469,242.98	273,900,379.82
Number of outstanding equities	18,163,301	22,964,801	35,334,495	49,878,409	29,692,832
Net asset value	7.8716	5.8168	8.6964	4.7208	9.2244
Unit distribution on capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)	0.57	0.53	0.45	0.44	0.10
Unit tax credit transferred to unit holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	-	5.78	2.31	-2.82	-11.63

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding units on that date.

⁽²⁾ The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 6 September 2018.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR FTSE MIB DAILY (-1X) INVERSE (BEAR) UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR FTSE MIB DAILY (-1X) INVERSE (BEAR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

The Lyxor FTSE MIB Daily (-1x) Inverse (Bear) UCITS ETF Compartment (the “Compartment”) is an index-based UCITS of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Class of Acc equities: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment’s management objective is to obtain an inverse daily exposure, upwards or downwards, to the Italian equity market while reproducing the FTSE MIB Daily Short Strategy RT Gross TR strategy index (the “Benchmark indicator”), whatever its evolution, and while insofar as possible minimising the tracking error between the Compartment’s performances and those of the FTSE MIB Daily Short Strategy RT Gross TR.

The anticipated level of the ex-post tracking error under the normal market conditions is 1%.

Benchmark indicator:

The benchmark indicator is the FTSE MIB Daily Short Strategy RT Gross TR strategy index, (gross dividends reinvested, which means that the Benchmark Indicator's performance includes the net dividends paid by its underlying equities) listed in Euros (EUR) (the “Benchmark Indicator”).

The Benchmark Indicator is a strategy index defined and maintained by FTSE and Borsa Italiana Spa.

The Benchmark Indicator offers an inverse exposure, adjusted each day, upwards or downwards to the evolution of the Parent Index. As such, in the event of a decline of the Parent Index, the Compartment’s net asset value will increase over that same day and, in the event of an increase of the Parent Index, the Compartment’s net asset value will decline over that same day and the shareholders will not benefit from the increase of the Parent Index.

The adoption of a short position relative to the Parent Index implies borrowing costs that are part of the method used to calculate the Benchmark Indicator.

As such, the performance of the Benchmark Indicator over a given market day is equal to the inverse performance of the Parent Index over that same market day, plus the interests (EONIA) collected each day on twice the valuation of the previous closing price of the Benchmark Indicator less the cost of the short position strategy as compared, on that market day, to the basket used by the FTSE MIB index.

The Parent Index is an index that is weighted by floating market capitalisation, which measures the evolution of 40 of the largest securities listed on the Borsa Italiana.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and on the respective importance of components of the Benchmark Indicator will be available on the Internet site: <http://www.ftse.com/products/indexmenu>

The monitored performance is that of the closing prices of the Benchmark Indicator, in Euros.

Benchmark indicator publication

The Benchmark Indicator is calculated on a daily basis at closing prices using the official closing market prices of the stock exchanges where the constituent stocks are listed. The Benchmark indicator is also calculated in real time every day that the Benchmark Indicator is published.

The Benchmark Indicator's closing price is available on the Internet site: <http://www.ftse.com/products/indexmenu>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the FTSE International Limited director of the FTSE MIB Daily Short Strategy RT Gross TR benchmark index is registered in the register of directors and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the GSP has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

Benchmark indicator revision and composition

The revision of the Benchmark Indicator's composition depends on the revision of its Parent Index's composition. The composition of the Parent Index is revised quarterly.

The leverage in the Benchmark Indicator computation formula undergoes a daily readjustment. The consequences related to the daily readjustment of the leverage are detailed, for instance, in the Benchmark Indicator and Risk profile sections of the prospectus.

The exact composition of the Benchmark Indicator and its revision rules published by Euronext are available on the Internet site: <http://www.ftse.com/products/indexmenu>. The above-mentioned rebalancing frequency has no impact on the costs within the framework of the implementation of the Investment strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit will be checked on each rebalancing date of the Benchmark Indicator, in application of the Benchmark Indicator's calculation method that limits the exposure to each equity of a single issuing entity to 20%, and for which the calculation is carried out by the sponsor or the calculation agent of the Benchmark Indicator. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument or of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

- o Subordination to the main market indices or to the Benchmark Indicator,
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),

- o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).
- of diversification, notably:
- o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- o Geographical area,
- o Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowings

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depository. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;

(iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;

(iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into total return swaps on behalf of the Compartment.

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company's Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company's relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company's Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company's senior management and/or to the Société Générale group's Risk department.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk of daily readjustment of the leverage

Investors are inversely exposed to the fluctuations affecting the price or level of the Parent Index on a daily basis.

The daily readjustment of the exposure shown in the formula of the underlying “short” strategy index implies that, over a period of more than one business day, the Compartment’s performance will not be equal to the opposite of the performance of the Parent Index. For example, if the Parent Index appreciates by 10% on one business day then depreciates by 5% on the next business day, the ETF will be depreciated in all, after these two days (and before deduction of the applicable fees), by 5,5%, while the Parent Index will be appreciated by 4.5% in all over the same period. If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated by a total of 9.75%, while the ETF will have appreciated (before deduction of the applicable fees) by 10,25% over the same period.

Negative scenario 1

Case in which the induced negative leverage is greater than 1 within the scenario of an increase of the Parent Index

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	10%	110	-10%	90	x-1
Day 2	-8%	101.2	8%	97.2	x-1
Whole period	1.20%		-2.80%		x-2.33

Negative scenario 2

Case in which the induced negative leverage is less than 1 within the scenario of a decline of the Parent Index

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	-10%	90	10%	110	x-1
Day 2	6%	95.4	-6%	103.4	x-1
Whole period	-4.60%		3.40%		x-0.74

Moreover, it is possible that over an observation period of more than one day and in case of strong volatility of the Parent Index over this period, the Compartment’s net asset value will decline even if the Parent Index also posts an increase over this same period.

Inverted leverage scenario:

Case in which the resulting leverage is positive over the period

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	5%	105	-5%	95	x-1
Day 2	-5%	99.75	5%	99.75	x-1
Whole period	-0.25%		-0.25%		x1

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction (“ST”), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment’s counterparty in a future financial instrument), the Compartment’s net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST’s treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an inverse exposure to the upward or downward evolution of the Italian equity market, i.e. of 40 of the largest securities listed on the Borsa Italiana.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one’s investments so as to avoid an exposure only to this Compartment’s risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitration product, this Compartment could not be suitable to investors who wish to make a mid- or long-term investment. “U.S. Persons” (as defined below - see “COMMERCIAL ORDER INFORMATION”) may not invest in the Compartment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment’s complete prospectus and the latest annual and periodic documents are sent within one week of the bearer’s written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2018.*
- *Compartment creation date: 6 September 2018.*

Activity report

The investment objective of the sub-fund is to track the performance of FTSE MIB Daily Short Strategy RT Gross TR (Ticker:FMIBI1X).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor FTSE MIB Daily (-1x) Inverse (Bear) UCITS ETF - Acc	FR0010446146	EUR	-23.01% ⁽¹⁾	-22.31%		-63.12%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.0187% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533-22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Due to the investment policy of this fund, Lyxor will not disclose any metrics in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

<https://www.lyxor.com/politiques>

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published by the fixing WM Reuters on the day of the Compartment's net asset value date.

Posting method for the negotiation fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.60% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

appendix

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Class of Acc equities: Capitalisation of all the amounts available for distribution.

Currency					
EUR	31.10.2019	31.10.2018	29.09.2017	30.09.2016	30.09.2015
Net assets	113,995,204.93	76,442,669.36	55,902,601.52	58,822,500.80	71,672,232.01
Number of outstanding equities	7,727,057	3,989,547	3,195,532	2,247,354	3,061,403
Net asset value	14.7527	19.1607	17.4939	26.1741	23.4115
Unit distribution on capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to unit holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	-3.41	1.38	9.37	55.93	-42.88

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding units on that date.

⁽²⁾ The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 6 September 2018.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR BUND DAILY (-2X) INVERSE UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR BUND DAILY (-2X) INVERSE UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

The Compartment Lyxor Bund Daily (-2x) Inverse UCITS ETF (the “Compartment”) is an index-based UCITS of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Class of Acc equities: Capitalisation of all the amounts available for distribution.

Management objective:

The management objective of the Compartment is to be inversely exposed with a daily x2 leverage, upwards or downwards, to the daily performance of the market for German government bonds with residual maturities of 8.5 to 10.5 years while reproducing the evolution of the Solactive Bund Daily (-2x) Inverse Index (the “Benchmark Indicator”) listed in euros (EUR), while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

Benchmark indicator:

The Benchmark Indicator is a strategy index developed by Solactive AG, using a proprietary methodology. It is calculated and maintained by Solactive AG.

The Benchmark Indicator offers reverse exposure, with a daily leverage effect x2, to the rise or fall in the trend the market for German government bonds with residual maturities of 8.5 to 10.5 years, of which Euro-Bund futures contracts are an indicator representative, with daily x2 leverage. Thus, in the event of a fall in the Euro-Bund over a day, the net asset value of the Compartment will increase double on the same day and, in the event of a rise in the Euro-Bund, the daily net asset value of the Compartment will decrease doubling and shareholders will not benefit from the rise in the Euro-Bund.

Euro-Bund futures are a representative indicator of the German government bond market with residual maturities between 8.5 and 10.5 years, quoted on Eurex, and whose methodology is available on: www.eurexchange.com.

The daily performance of the Benchmark Indicator is equal to the inverse of twice the daily performance of the Euro-Bund futures, cumulated with the interest (at the reference rate) received daily on the valuation of the previous day's fixing of the Benchmark Indicator.

It is therefore an index that represents a short selling strategy with an amplifying x2 leverage on the Euro-Bund futures with daily rebalancing. An additional rebalancing may be carried out during the session if the Benchmark Indicator drops by more than 40% during a business day (i.e. if the variation of the daily price of the Bund future, in absolute value, is greater than 20%).

The performance tracked is that of the Benchmark Indicator’s closing fixing in Euros.

As the Benchmark Indicator's calculation methodology is not based on a direct exposure to the German government bonds but on indirect investment in futures, the Compartment's performance will be impacted by the cost related to the roll of the aforesaid futures on a quarterly basis.

This phenomenon could negatively and progressively impact, potentially in a significant manner, the gap between the Compartment's performance and the gross performance of the short positions on the underlyings of the aforesaid futures, notably in case of long-term investment in the Compartment's equities.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition of the Benchmark Indicator are available at the following Internet site: <https://www.solactive.com>.

Benchmark indicator revision and composition

The Benchmark Indicator is revised daily.

The frequency of this adjustment could have an impact on the Compartment's costs and could therefore diminish its performance.

Benchmark indicator publication

The Benchmark Indicator is calculated daily on the official closing fixing of Euro-Bund futures at 5:15 pm. The Benchmark Indicator fixing is available on the website: <https://www.solactive.com>.

Pursuant to Article 34 of European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, Solactive AG, the administrator of the Solactive 10Y US Treasury Futures Daily (-2x) Inverse Index, is registered in ESMA's register of benchmark index administrators.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other securities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment may be exposed, for up to 20% of its assets, to debts issued by an OECD non-member State. This 20% limit can be increased to 35% for a single bond when this proves to be justified by exceptional market conditions, notably when certain securities are excessively dominant and/or in case of high volatility of a debt issue, or in case of a political and/or economic event that is having or could have an incidence on the assessment of an issuing State's debt and/or that could affect an issuing State's credit rating, or any other event likely to affect the liquidity of a financial security included within the Benchmark Indicator.

Notwithstanding the hypotheses indicated in the above paragraph, securities issued by a single issuing State can represent up to 35% of the assets, and 100% of the assets if the Compartment holds at least 6 debt issues, none of which exceeds 30% of the assets. The aforesaid securities must be financial instruments issued or guaranteed by an OECD member State, the local or regional authorities of a European Union Member State, or a party to the EEA agreement.

In the present case, the manager intends to primarily use the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, securities of the Euro zone (from all economic sectors, listed on all markets), including the small capitalisation markets.

The aforementioned equities will be bonds chosen on the basis of criteria:

- of eligibility, in particular:
 - o Senior debt
 - o Fixed maturity
 - o Maximum residual maturity
 - o Minimum issuing amount
 - o Requirement of a minimal threshold in S&P rating or equivalent.
- of diversification, notably:
 - o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
 - o Geographical area,
 - o Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the following Internet site: www.lyxoretf.com. The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowings

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

The financial guarantees received on another form than cash will not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the Compartment may recall at any time the global amount of liquidities taking into account the accrued interests;
- (iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company shall implement a policy for selecting financial intermediaries and counterparties particularly when it enters into total return swaps on the Compartment's behalf.

Financial establishments of an OECD country which have been found to be satisfactory are selected. Such analysis is done on the basis of the Management Company risk department's specific criteria, such as financial stability, rating, exposure, credit spread, type of business, track-record, etc.

The list of authorised counterparties shall be reviewed periodically or in the event of a market shock or decline in the selection criteria. This involves various departments (investment management, risks, operations, and support staff) of the Management Company. The counterparties selected are monitored regularly in accordance with the Management Company's Execution Policy. An escalation procedure to Senior Management of the Management Company and/or the Risk Department of the Société Générale group is provided in the event of an incident.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Interest rate risk

The price of a bond can be affected by unexpected fluctuations of interest rates, which can themselves notably affect yield curves. The bonds included in the composition of the Benchmark Indicator are therefore exposed to such fluctuating interest rates. In general, a bond's price increases when interest rates drop, while this price will drop when those of interest rates rise.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

- iv) A market maker's violation of the rules applicable to this marketplace, and/or
v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk of daily readjustment of the leverage (double short)

Investors are inversely and doubly exposed to the fluctuations affecting each day the price or level of the futures on the Bund underlying the Benchmark Indicator. In particular, any appreciation of the underlying market will be inversely amplified and will entail an even higher depreciation of the Compartment's net asset value. The daily readjustment of the exposure shown in the formula of the underlying "double short" Benchmark Indicator implies that, over a period of more than one business day, the Compartment's performance will not be equal to the double of the opposite of the performance of the futures on the Bund underlying the Benchmark Indicator. Indeed, investors are underexposed to the volatility.

For example, if the futures on the Bund underlying the Benchmark Indicator appreciate by 10% over one trading day and then depreciate by 5% on the next business day, the ETF will have depreciated in all, after these two days (and before deduction of the applicable fees), by 12%, while the futures on the Bund underlying the Benchmark Indicator will have appreciated by 4.5% over the same period.

Should the futures on the Bund underlying the Benchmark Indicator decline by 10% on a given business day and then increase by 6% on the next day, the ETF will increase by a total of 5.60% after these two days (and before deduction of the applicable expenses), while the futures on the Bund underlying the Benchmark Indicator will have declined by 4.60% over the same period.

Also, should the futures on the Bund underlying the Benchmark Indicator increase by 5% on a given business day and then decline by 5% on the next day, the ETF will decline by a total of 1% after these two days (and before deduction of the applicable expenses), while the futures on the Bund underlying the Benchmark Indicator will have declined as well, by only 0.25% over the same period.

Negative scenario 1

Case in which the resulting negative leverage is greater than 2 within the scenario of an increase of the Benchmark Indicator's underlying.

	Underlying of the Benchmark Indicator		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	10%	100	-20%	100	x-2
Day 2	-5%	110	10%	80	x-2
		104.5		88	
Whole period	4.50%		-12.00%		x-2.67

Negative scenario 2

Case in which the resulting negative leverage is less than 2 within the scenario of a decrease of the Benchmark Indicator's underlying.

	Underlying of the Benchmark Indicator		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	-10%	100 90	20%	100 120	x-2
Day 2	6%	95.4	-12%	105.6	x-2
Whole period	-4.60%		5.60%		x-1.22

Moreover, it is possible that over an observation period of more than one day, and in case of strong volatility of the Benchmark Indicator's underlyings over this period, the Compartment's net asset value will decline even if the Benchmark Indicator's underlyings also show a decline over this same period.

Inverted leverage scenario:

Case in which the resulting leverage is positive over the period

	Underlying of the Benchmark Indicator		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	5%	100 105	-10%	100 90	x-2
Day 2	-5%	99.75	10%	99	x-2
Whole period	-0.25%		-1.00%		x4

- Risk of future roll

As the Benchmark Indicator is made of futures contracts on German government bonds (BUND), a quarterly roll of position on futures is required to maintain the exposure at the same level: the roll of future contracts consists in the transfer of a position on futures with a close maturity (in all cases before the term of future contracts) on futures with a longer maturity.

The investor is exposed to a loss or gain risk during futures rolls. In some configuration of the market, this phenomenon could lead to an automatic loss during quarterly rolls and, by this way, impact unfavourably, gradually and significantly the difference between Compartment's performance and the gross performance of short positions on underlyings of abovementioned futures, in particular, in case of a long-term investment in the Compartment shares.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value. "Events affecting the index" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the Benchmark Indicator is incapable of providing the level or value of the said index,
- iv) The supplier of the Benchmark Indicator makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Compartment wishes to gain inverse exposure, both upwards and downwards, with a daily leverage amplification of 2, to the performance of the market for German government bonds with residual maturities of 8.5 to 10.5 years.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

LYXOR BUND DAILY (-2X) INVERSE UCITS ETF
(compartment of the Multi Units France Sicav)

As an arbitration product, this Compartment could not be suitable to investors who wish to make a mid- or long-term investment. “U.S. Persons” (as defined below - see “COMMERCIAL ORDER INFORMATION”) may not invest in the Compartment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*

Activity report

The investment objective of the sub-fund is to track the performance of Solactive Bund Daily (-2x) Inverse Index (Ticker:SODI2BUN).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor Bund Daily (-2x) Inverse UCITS ETF - Acc	FR0010869578	EUR	-16.06% ⁽¹⁾	-15.78%		-71.67%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.0354% for the sub-fund. The Tracking Error target for the year was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Until 20 June 2019 the Fund's Benchmark Indicator was SGI Daily Double Short Bund Index, from 21 June 2019 the Benchmark Indicator is Solactive Bund Daily (-2x) Inverse Index.

Index Linked Swap's counterparty is: Société Générale.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy.
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy.
- MSCI and Sustainalytics ESG research to integrate ESG issues.
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will provide investors with an indication of their current financed emissions.

After carefully analyzing the Indicators and data available to take into account and measure the transition risks that climate change poses to Issuers, Lyxor will not report on those matters at this time. We will work with our external providers in order to enhance our knowledge to report and better reflect the risk of transition in the coming years.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

LYXOR BUND DAILY (-2X) INVERSE UCITS ETF
(compartment of the Multi Units France Sicav)

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:
<https://www.lyxor.com/politiques>

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.
- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the WM Reuters on the same day of the Compartment's net asset value date.

appendix

appendix

Posting method for the negotiation fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the compartment).

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company. For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.
- Commissions received for temporary securities acquisitions and sales operations.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company (1)	Net assets	maximum 0.20% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually (*Not certified by the auditor*)

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Class of Acc equities: Capitalisation of all the amounts available for distribution.

appendix

Lyxor Bund Daily (-2x) Inverse UCITS ETF is a Compartment under French law approved by the AMF. The Compartment prospectus is available on the Internet site www.lyxoretf.com or by simple request to the Management Company.

The Compartment in no way benefits from the sponsorship, support or promotion, and is not sold by Solactive AG. Solactive AG grant no guarantee and undertake no commitment, whether explicitly or implicitly, relative to the results to be obtained through the use of the Benchmark Indicator and/or the Benchmark Indicator Mark and/or relative to the level at which the said Benchmark Indicator may be at any given moment or day, or of any other type. The Benchmark Indicator is calculated and published by Solactive AG. Solactive AG makes every effort to ensure that the Reference Indicator is calculated correctly. Regardless of its obligations towards the issuer, Solactive AG is under no obligation to report errors affecting the Benchmark Index to third parties, including investors or financial intermediaries of the Compartment. Neither the publication of the Benchmark Index by Solactive AG, nor the licensing of the Benchmark Index or its mark in connection with the Compartment constitutes a recommendation by Solactive AG to invest in the Compartment's shares and in no way represents a guarantee or opinion of Solactive AG of an investment in the Compartment's shares. Solactive AG will not be liable for the consequences of any advice or opinion arising from this statement or any omission.

Unit tax credit transferred to unit holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	-4.98	0.33	-1.99	-1.50	-9.26

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding units on that date.

⁽²⁾ The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 6 September 2018.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR FTSE MIB UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR FTSE MIB UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Equities of eurozone countries.

At least 60% of the Lyxor FTSE MIB UCITS ETF Compartment (the “Compartment”) is continuously exposed in one or several markets of equities issued in one or several eurozone countries including the French market.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Class of Dist equities: The Board of Directors reserves the right to capitalise and/or distribute all or part of the amounts available for distribution, one or more times each year.

Management objective:

The management objective of this Compartment is to replicate the upwards or downwards evolution of the FTSE MIB™ Net Total Return index (net dividends reinvested) (“Benchmark Indicator”) listed in euros while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

Benchmark Indicator:

The Benchmark Indicator measures the performance of 40 equities listed in the market organised and operated by the Italian stock exchange and aims at replicating the sectorial breakdown of the Italian national market.

The Benchmark Indicator is a Net Total Return index which means that the Benchmark Indicator’s performance includes the net dividends paid by its underlying equities.

The composition of the Benchmark Indicator is determined on the basis of three criteria: the free-float, the liquidity and the representativeness of the main market segments according to the ICS (Industry Classification Standard) classification.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator’s components will be available on the Internet site: <http://www.ftse.com>

The monitored performance is that of the closing prices of the Benchmark Indicator.

Benchmark indicator publication

The Benchmark Indicator’s closing price is available on the FTSE Internet site: <http://www.ftse.com>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the FTSE International Limited director of the FTSE Reference Index MIB™ Net Total Return is registered in the register of directors and reference indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the GSP has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

Benchmark indicator revision and composition

The Benchmark Indicator is reviewed quarterly.

The exact composition and rules for Benchmark Indicator revision, published by Euronext, are available on the Internet site: <http://www.ftse.com>

The rebalancing frequency indicated above does not affect the cost of implementing the Investment strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will reach its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to reach its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities in the Compartment's assets will notably be securities making up the Benchmark Indicator, as well as other European equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

The Compartment will invest permanently at least of 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the treaty on the European Economic Area and that has signed with France a tax agreement containing an administrative assistance clause for the purposes of combating fraud or tax evasion.

This minimum holding level provides for eligibility for a Stock Savings Plan.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation of the international equities (from all economic sectors, listed on all markets), including the small capitalisation markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
 - o Subordination to the main market indices or to the Benchmark Indicator,
 - o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
 - o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:
 - o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
 - o Geographical area,
 - o Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

The investment in undertakings for collective investment in transferable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked.

As part of a future optimisation of the Compartment’s management, the financial manager by delegation reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Compartment’s assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (in compliance with the description contained in this section’s paragraph 1 above).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s investment portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.

- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company’s conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment’s use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt to the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

The financial guarantees received on another form than cash will not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the Compartment may recall at any time the global amount of liquidities taking into account the accrued interests;
- (iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company shall implement a policy for selecting financial intermediaries and counterparties particularly when it enters into total return swaps on the Compartment's behalf.

Financial establishments of an OECD country which have been found to be satisfactory are selected. Such analysis is done on the basis of the Management Company risk department's specific criteria, such as financial stability, rating, exposure, credit spread, type of business, track-record, etc.

The list of authorised counterparties shall be reviewed periodically or in the event of a market shock or decline in the selection criteria. This involves various departments (investment management, risks, operations, and support staff) of the Management Company. The counterparties selected are monitored regularly in accordance with the Management Company's Execution Policy. An escalation procedure to Senior Management of the Management Company and/or the Risk Department of the Société Générale group is provided in the event of an incident.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses future financial instrument (“FFI”) negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment’s net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment’s manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment’s underlyings can affect the Compartment’s tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment’s net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment’s underlyings, the Compartment’s net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment’s net asset value can also be affected.

If the event persists, the Compartment’s manager will decide on measures having to be adopted, which can have an impact on the Compartment’s net asset value.

“Events affecting the Benchmark Indicator” are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market’s actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator’s components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator’s performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction (“ST”), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment’s counterparty in a future financial instrument), the Compartment’s net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST’s treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the Italian equities market.

The amount that it is reasonable to invest in this Compartment depends on each investor’s personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one’s investments so as to avoid an exposure only to this Compartment’s risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 3 years.

“U.S. Persons” (as defined below - see “COMMERCIAL ORDER INFORMATION”) may not invest in the Compartment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment’s complete prospectus and the latest annual and periodic documents are sent within one week of the bearer’s written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2018.*
- *Compartment creation date: 20 September 2018.*

Activity report

The investment objective of the sub-fund is to track the performance of FTSE MIB Net TR EUR (Ticker: FTSEMIBN).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor FTSE MIB UCITS ETF - Dist	FR0010010827	EUR	23.27% ⁽¹⁾	22.98%		40.90%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.0723% for the sub-fund. The Tracking Error target for the year was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

Index Linked Swap's counterparty is: Société Générale.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533-22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

-The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

-Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),

-A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 3%
Orange Flag 32%
Yellow Flag 18%
Green Flag 46%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2019

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	90%
360	247	331	Scope 1 reported (vs estimated)	90%
			Scope2 reported (vs estimated)	64%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	25%
Thermal Coal	0%
Natural Gaz	25%
Oil	25%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0062
Oil (MMBOE)	0.0060

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	2 551.9
Gas	1 992.1
Total	4 544.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	4 544.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	18.0%	0.0%	29.3%
Some efforts	72.6%	93.5%	50.0%
Limited efforts/information	3.0%	3.0%	4.1%
No effort/No evidence	6.4%	3.4%	16.6%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

26.6%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	24.3%
Liquid Fuel	9.0%
Natural Gas	22.7%
Nuclear	8.5%
Renewables	12.2%
Thermal Coal	23.3%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	36%
20-49.9%	0%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	29.9%
Energy Efficiency	21.8%
Green Building	0.0%
Pollution Prevention	0.9%
Sustainable Water	2.9%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	1.5%
Energy Efficiency	0.9%
Green Building	0.0%
Pollution Prevention	0.0%
Sustainable Water	0.1%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

1. Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Financial management fees and administrative fees external to the management company including tax ⁽¹⁾	Net assets	maximum 0.35% per year including tax
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment's accounting is carried out in euros (EUR).

appendix

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

In the event of a distribution, the Board of directors reserves the right to distribute all or part of the amounts available for distribution, one or more times each year.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR IBEX 35 (DR) UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR IBEX 35 (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Equities from countries of the Euro area.

At all times, the Lyxor IBEX 35 (DR) UCITS ETF Compartment (the “Compartment”) is 60% exposed to at least one or several equity market(s) issued in one or several country/countries of the Euro area, possibly including the French market.

The Compartment is index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Class of Dist equities: The Board of Directors reserves the right to capitalise and/or distribute all or part of the amounts available for distribution, one or more times each year.

Class of Acc equities: Capitalisation of all the amounts available for distribution.

Management objective:

The management objective of this Compartment is to replicate the upward or downward evolution of the IBEX 35 Net Return index (net dividends reinvested) (the “Benchmark Indicator”), listed in euros and the main Spanish stock market index, while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.20%.

Benchmark indicator:

The Benchmark Indicator is an equities index calculated and published by the Sociedad de Bolsas.

The Benchmark Indicator includes 35 Spanish equities selected according to a liquidity criterion.

The Benchmark Indicator is a Net Return index which means that the Benchmark Indicator’s performance includes the net dividends paid by its underlying equities.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and on the respective importance of components of the Benchmark Indicator will be available on the Internet site: <http://www.bolsamadrid.es>

The monitored performance is that of the closing prices of the Benchmark Indicator.

Benchmark indicator publication

The Benchmark Indicator is calculated daily at the closing price using the official closing prices of the exchanges where the index constituents are listed. The Benchmark Indicator is also calculated in real time on each day belonging to the publication calendar of the Benchmark Indicator.

The Benchmark Indicator is available in real-time via Reuters and Bloomberg.

The Benchmark Indicator’s closing price is available on the Internet site: <http://www.bolsamadrid.es>

In accordance with Regulation (EU) 2016/1011, the management company has a plan for monitoring the benchmark indices it uses within the meaning of that Regulation.

In accordance with Article 52 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Director shall Sociedad de Bolsas of the IBEX 35 Net Return Benchmark Indicator has until 01.01.2020 to apply for an approval or a registration, if applicable.

As of the date of the last update of this prospectus, the administrator of the Reference Index has not yet been registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the reference indices used, describing the measures to be implemented in the event of changes to an index or discontinuance of the provision of that index.

Benchmark indicator revision and composition

The composition of the Benchmark Indicator is reviewed quarterly.

The exact composition and rules for Benchmark Indicator revision, published by Sociedad de Bolsas, are available on Internet site: <http://www.bolsamadrid.es>. The rebalancing frequency indicated above does not affect the cost of implementing the Investment strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In the pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will use a direct replication method which means that the Compartment will invest in a basket of balance sheet securities making up the Benchmark Indicator.

The Compartment may have recourse to various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French Monetary and Financial Code and in particular temporary securities sale operations under the conditions set out below.

On an ancillary basis, and once again to ensure the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment may also enter into contracts involving Future Financial Instruments (“FFI”). Such contracts entered into in this context may involve index futures and/or hedge swaps and in particular to minimize the Compartment’s tracking error.

In order to enable investors to benefit from transparency as to the direct replication method used (i.e. full replication of the Benchmark Indicator) and as to the consequences of this method on the Compartment’s assets, investors may find updated information on the composition of the basket of balance sheet assets held in the Compartment’s portfolio on the page dedicated to the Compartment at www.lyxoretf.com. The frequency of any updates and/or the date on which the aforementioned information is updated are also indicated on this page.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

At all times, the Compartment will invest at least 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the agreement on the European Economic Area and that has signed, with France, a tax convention that includes an administrative assistance clause for the purpose of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

In the present case, the manager intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment will be primarily invested in the equities making up the Benchmark Indicator.

The investment in undertakings for collective investment in transferable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

On an ancillary basis, the Compartment may use FFIs traded on a regulated market or over the counter.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments within the limits and under the conditions provided for by the regulations.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The Compartment may have recourse to various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French Monetary and Financial Code and in particular temporary securities sale operations.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 25% of the assets under management.

- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 20% of the assets under management.

For this purpose the management company will appoint Société Générale as intermediary (hereinafter the "Agent"), to provide the following services in connection with the temporary securities sale operations carried out by the Compartment. If such an Agent acts, it may be authorized to (i) engage in, on the Compartment's behalf, securities lending operations, pursuant to master securities lending agreements, such as the Global Master Securities Lending Agreements (GMSLA) and/or other internationally recognized master agreements and (ii) invest, on the Compartment's behalf, the liquid assets received as guarantees for these securities lending operations, in accordance with and within the limits of the securities lending agreement, the rules of this prospectus and the applicable regulations.

As a reminder, the Management Company is an entity of the Société Générale group and is therefore linked to the Agent.

In the event that such temporary disposals are used, all income from such transactions, net of direct and indirect operating costs/expenses, will be returned to the Compartment.

These operating costs/expenses, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent and/or other intermediaries that are involved in these transactions.

These direct and indirect operating costs/expenses will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating costs/expenses and on the entities to which these costs/expenses are paid will be provided in the annual report of the Sicav Multi Units France.

All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs/expenses borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect costs/expenses do not increase the Compartment's overall operating costs/expenses they have been excluded from ongoing expenses.

If necessary, the Compartment's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;
- the identity of the counterparty(ies) involved in these transactions;
- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs/expenses.

When Société Générale acts as counterparty to all transactions constituting effective portfolio management techniques, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

8. Financial guarantees

In all cases where the investment strategy used exposes the Compartment to counterparty risk, in particular in connection with temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt to the Compartment as part of the guaranteed transaction

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

The financial guarantees received on another form than cash will not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;

(iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the Compartment may recall at any time the global amount of liquidities taking into account the accrued interests;

(iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

COUNTERPARTY SELECTION POLICY

Pursuant to the terms of the contract signed with the Agent (see section 7 on “Securities financing transactions”), the Management Company will select eligible counterparties for securities financing transactions on the basis of the criteria indicated below and will provide Société Générale with a list of these counterparties.

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when it enters into financial contracts (securities financing transactions) on the Compartment behalf. Counterparties for securities financing transactions and financial intermediaries are selected from among well-known and reputable intermediaries using a rigorous process that involves several criteria for assessing the quality of research services (e.g. fundamental financial analysis, information on companies, added value of staff, and the reliability of recommendations) or of execution services (e.g. access to markets and information, transaction costs, execution price, and the settlement of transactions).

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company’s Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company’s relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company’s Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company’s senior management and/or to the Société Générale group’s Risk department.

Risk profile:

The shareholder’s money will primarily be invested in financial instruments making up the Benchmark Indicator selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market.

The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (“FFI”)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment’s share price can deviate from its indicative net asset value. The liquidity of the Compartment’s equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risk related to the use of effective portfolio management techniques:

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the If the Compartment fails to do so, the Compartment may incur a risk in the event that the value of the guarantees received by the Compartment is insufficient. Compartment would be less than the value of the assets of the Compartment transferred to the counterparty under the EPMT concerned. This risk could materialize in particular in the event of (i) a poor valuation of the securities covered by this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the issuers' credit ratings securities received as collateral and/or (iv) market illiquidity on which the collateral received is listed.

Holders' attention is drawn to the fact that (i) EPMTs could be concluded with Société Générale (an entity of the same name group as the Management Company) and/or (ii) that Société Générale could be appointed as agent of the Compartment in the EPMT framework.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by the supplier of the index,
- iii) The supplier of the index is incapable of providing the level or value of the Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Risk related to the use of derivative instruments

The Compartment may use forward financial instruments ("FFIs") traded over the counter or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs may involve a range of risks, at the contract level, including (but not limited to) the following: counterparty risk, hedging event, event affecting the Benchmark Indicator, tax regime risk, regulatory risk and liquidity risk. These risks may directly affect an FFI and may lead to an adjustment or even early termination of the FFI's contract, which may affect the net asset value of the Compartment.

Investment in FFIs may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "lever effect" at the level of each transaction. A relatively limited market movement would then have a proportionally very high impact, which may be favourable or unfavourable to the Compartment.

The market value of FFIs is very volatile and can therefore be subject to significant variations.

The Compartment may use over-the-counter FFIs. Over-the-counter transactions may be less liquid than transactions traded on organized markets, where trading volumes are generally higher and prices may be more volatile.

Subscribers concerned and typical investor profile:

The Compartment is "open to any subscriber".

The investor that subscribes this Compartment wishes to find exposure to the Spanish zone equity markets.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2013.*
- *Compartment creation date: 20 September 2018.*

Activity report

The investment objective of the sub-fund is to track the performance of IBEX 35 Net Return EUR (Ticker: IBEXNR).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor IBEX 35 (DR) UCITS ETF - Dist	FR0010251744	EUR	8.35% ⁽¹⁾	7.78%		28.27%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index;
- sampling techniques or efficient portfolio management techniques»

The Tracking Error is 0.1634% for the sub-fund. The Tracking Error target for the year was 0.2%.

The realized tracking error level is below the anticipated tracking error level due to market conditions and replication techniques implemented by the portfolio managers. This difference is considered as immaterial.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

French Funds (Fonds Communs de Placement – FCP)*, French & Luxembourgish SICAV (*) limited to European issuers.

To prevent excess cost resulting by the voting process, Lyxor votes only where its consolidated holdings represent at least 0.10% of the company's equity capital.

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership. This stake lets us influence companies to improve their ESG practices in the long term.

In terms of engagement, Lyxor joined the Climate Action 100+ initiative, committing itself to asking companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosures) recommendations.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,
- MSCI and Sustainalytics ESG research to integrate ESG issues,
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

For an optimal voting preparation process and execution Lyxor uses a Proxy Voting Advisor.

Lyxor currently uses the services of ISS (Institutional Shareholder Services) for the implementation of its voting policy.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO2e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

LYXOR IBEX 35 (DR) UCITS ETF
(compartment of the Multi Units France Sicav)

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 27%
Yellow Flag 32%
Green Flag 41%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2019

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	97%
230	260	211	Scope 1 reported (vs estimated)	100%
			Scope2 reported (vs estimated)	86%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	9%
Thermal Coal	3%
Natural Gas	8%
Oil	5%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0029
Oil (MMBOE)	0.0012

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	190.4
Thermal Coal	0.0
Oil	492.2
Gas	939.8
Total	1 622.4

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	1 622.4

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	16.3%	0.0%	2.1%
Some efforts	79.7%	99.5%	74.2%
Limited efforts/Information	3.2%	0.0%	20.0%
No effort/No evidence	0.8%	0.5%	3.7%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

22.7%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	14.2%
Liquid Fuel	0.3%
Natural Gas	38.5%
Nuclear	16.6%
Renewables	24.5%
Thermal Coal	6.0%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	33%
20-49.9%	4%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	34.1%
Energy Efficiency	37.7%
Green Building	5.4%
Pollution Prevention	4.2%
Sustainable Water	7.2%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	2.8%
Energy Efficiency	1.0%
Green Building	1.5%
Pollution Prevention	0.1%
Sustainable Water	0.6%

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

In order to prevent the excessive costs inherent in the voting process, Lyxor attends general meetings when the consolidated holding represents more than 0.10% of the company's share capital. This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	37
Number of Voted Meetings	36
Participation rate at General Meetings	97.3%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Routine/Business	98.9%	3.1%	0.0%
Capitalization	84.8%	15.2%	0.0%
Directors Related	84.9%	15.1%	0.0%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

<https://www.lyxor.com/politiques>

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at www.lyxor.com

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

As at 31 October 2019, the CIU does not have a securities position subject to the SFTR regulations, i.e. repurchase agreements, securities or commodities lending/borrowing, purchase/resale or sale/purchase transactions, margin call lending transactions and global income swap (TRS) agreements.

However, during the financial year, the CIU had recourse to securities lending/borrowing transactions subject to the SFTR regulations which generated income in the amount of €30,539.98 from which were deducted direct and indirect operating costs/expenses in the amount of €16,444.60 borne by the Management Company and/or the Agent (where applicable).

Effective portfolio management techniques and derivative financial instruments

a) Exposure obtained through effective portfolio management techniques and derivative financial instruments

• Exposure obtained through effective management techniques:		-
- Securities lending:	-	
- Securities borrowing:	-	
- Reverse repurchase agreements:	-	
- Repurchase agreements:	-	
• Underlying exposure achieved through derivative financial instruments:		8,349,840.00
- Forward exchange contracts:	-	
- Futures:	-	
- Options:	-	
- Swaps:	8,349,840.00	

b) Identity of counterparty(ies) to effective portfolio management techniques and derivative financial instruments

1. Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives. They are invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.
- Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities;

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.30% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None
Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities	The amount of the transaction	20% maximum for the Management Company;
		15% maximum for the Agent

appendix

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment's accounting is carried out in euros.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually (*Not certified by the auditor*)

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Class of Dist equities: The Board of Directors reserves the right to capitalise and/or distribute all or part of the amounts available for distribution, one or more times each year.

Class of Acc equities: Capitalisation of all the amounts available for distribution.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR MSCI EUROPE (DR) UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR MSCI EUROPE (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

International equities.

At least 60% of the Lyxor MSCI Europe (DR) UCITS ETF Compartment (the “Compartment”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Classe of Dist equities: The Board of directors reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The Compartment’s management objective is to replicate, upward or downward, the MSCI Europe Net Total Return index (net dividends reinvested) (the “Benchmark Indicator”), listed in Euros (EUR), and representative of the large and medium capitalisations of the developed European markets, while minimising as far as possible the tracking error between the performance of the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

Benchmark indicator:

The Benchmark is the MSCI Europe Net Total Return index, net dividends reinvested (i.e. the Benchmark Indicator's performance includes the net dividends paid by its underlying equities), listed in EUR.

The Benchmark Indicator is an equity index, weighted by free float-adjusted market capitalisation, calculated and published by the international index provider MSCI.

The Benchmark Indicator retains the basic features of the MSCI indices, i.e.:

- a) The universe of securities included in the Benchmark Indicator;
- b) Free-float adjustment of the securities included in the Benchmark Indicator;
- c) Industry classification according to the Global Industry Classification Standard (GICS).

The Benchmark Indicator is a representative index of large and mid-cap companies in developed European markets. The Benchmark Indicator includes only stocks from European countries and aims to include 85% of the free float-adjusted market capitalisation of each country in the index and of each European industry group.

By targeting 85% of the representativeness of each industry group, the Benchmark Indicator measures 85% of the market capitalisation of the European markets, while also reflecting the market’s economic diversity.

The MSCI methodology and its calculation method entail the Benchmark Indicator being made up of a variable number of companies.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and on the respective importance of components of the Benchmark Indicator will be available on the Internet site: <http://www.msci.com>.

The monitored performance is that of the closing prices of the Benchmark Indicator.

Benchmark indicator publication

Official MSCI indices are indices calculated continuously from 9:00 am to 5:30 pm (Paris time) for which MSCI calculates a closing price using the official closing prices of the stock exchanges on which the constituent securities are listed.

The Benchmark Indicator is also calculated in real time on each trading day. The Benchmark Indicator is available via Reuters and Bloomberg.

The Benchmark Indicator's closing price is available on the Internet site: www.msci.com.

Benchmark indicator revision and composition

The revision of the Benchmark Indicator takes place quarterly.

The exact composition and rules for revision of the Benchmark, published by MSCI, are available on the Internet site: <http://www.msci.com>

The rebalancing frequency indicated above does not affect the cost of implementing the Investment strategy.

In accordance with Article 34 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator of the MSCI Limited Benchmark Indicator is registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the reference indices used, describing the measures to be implemented in the event of changes to an index or discontinuance of the provision of that index.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the direct replication method, which means that the Compartment will invest mainly in securities making up the Benchmark Indicator.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by its delegated asset manager, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

On an ancillary basis, and once again to ensure the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment may also enter into contracts involving Future Financial Instruments ("FFI"). Such contracts entered into in this context may involve index futures and/or hedge swaps and in particular to minimize the Compartment's tracking error.

In order to enable investors to benefit from transparency as to the direct replication method used (i.e. full replication of the Benchmark Indicator) and as to the consequences of this method on the Compartment's assets, investors may find updated information on the composition of the basket of balance sheet assets held in the Compartment's portfolio on the page dedicated to the Compartment at www.lyxoretf.com. The frequency of any updates and/or the date on which the aforementioned information is updated are also indicated on this page.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment will comply with the investment rules laid down in the European Directive 2009/65/EC of 13 July 2009. The Compartment will mainly invest in the securities making up the Benchmark Indicator.

The Compartment may hold up to 10% of its assets in units or shares of the following CIUs or investment funds: French or foreign UCITS complying with Directive 2009/65/EC - Within the framework of these investments, the Compartment may subscribe units or equities of UCITS managed by the Management Company or a company with which it is linked.

FIAs governed by French law or established in other Member States of the European Union (specify the type of FIAs concerned) other investment funds governed by foreign law (to be specified).

Where the Compartment receives securities as collateral, under the conditions and within the limits of paragraph 8 below of this section, which are received in full ownership by the Compartment, they also constitute balance sheet assets received in full ownership by the Compartment.

In the context of future optimisation of the management of the Compartment, the Manager reserves the possibility to use other instruments within the limits of the regulations in order to achieve its management objective.

3. Off-balance sheet assets (derivative instruments)

On an ancillary basis, the Compartment may use FFIs traded on a regulated market or over the counter.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments within the limits and under the conditions provided for by the regulations.

When Société Générale acts as a counterparty to FFIs, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowing.

7. Temporary securities acquisition and sale operations

The Compartment may use effective portfolio management techniques in accordance with the provisions of Article R214-18 of the French Monetary and Financial Code and in particular:

- Nature of the operations used:

securities lending and borrowing with reference to the Monetary and Financial Code

- Nature of the interventions, all transactions being limited to achieving the management objective:

optimisation of the Compartment's income.

Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 25% of the Compartment's assets. Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 20% of the Compartment's assets.

For this purpose the management company will appoint Société Générale as intermediary (hereinafter the "Agent"), to provide the following services in connection with the temporary securities sale operations carried out by the Compartment. If such an Agent acts, it may be authorized to (i) engage in, on the Compartment's behalf, securities lending operations, pursuant to master securities lending agreements, such as the Global Master Securities Lending Agreements (GMSLA) and/or other internationally recognized master agreements and (ii) invest, on the Compartment's behalf, the liquid assets received as guarantees for these securities lending operations, in accordance with and within the limits of the securities lending agreement, the rules of this prospectus and the applicable regulations.

As a reminder, the Management Company is an entity of the Société Générale group and is therefore linked to the Agent.

In the event that such temporary disposals are used, all income from such transactions, net of direct and indirect operating costs/expenses, will be returned to the Compartment.

These operating costs/expenses, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent and/or other intermediaries that are involved in these transactions.

These direct and indirect operating costs/expenses will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating costs/expenses and on the entities to which these costs/expenses are paid will be provided in the annual report of the Compartment.

All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs/expenses borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment.

Since these direct and indirect costs/expenses do not increase the Compartment's overall operating costs/expenses they have been excluded from ongoing expenses.

If necessary, the Compartment's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;
- the identity of the counterparty(ies) involved in these transactions;
- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs/expenses.

When Société Générale acts as counterparty to all transactions constituting effective portfolio management techniques, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, and transactions involving the temporary purchase and sale of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees

The financial guarantees received on another form than cash will not be sold, reinvested or pledged.

The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the Compartment may recall at any time the global amount of liquidities taking into account the accrued interests;
- (iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

COUNTERPARTY SELECTION POLICY

Pursuant to the terms of the contract signed with the Agent (see section 7 on "Securities financing transactions"), the Management Company will select eligible counterparties for securities financing transactions on the basis of the criteria indicated below and will provide Société Générale with a list of these counterparties.

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when it enters into financial contracts (securities financing transactions) on the Compartment behalf. Counterparties for securities financing transactions and financial intermediaries are selected from among well-known and reputable intermediaries using a rigorous process that involves several criteria for assessing the quality of research services (e.g. fundamental financial analysis, information on companies, added value of staff, and the reliability of recommendations) or of execution services (e.g. access to markets and information, transaction costs, execution price, and the settlement of transactions).

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company's Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company's relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company's Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company's senior management and/or to the Société Générale group's Risk department.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment’s share price can deviate from its indicative net asset value. The liquidity of the Compartment’s equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment’s indicative net asset value, and/or
- iv) A market maker’s violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace’s IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

- Risk arising from a lack of perfect replication

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly. The Compartment manager may therefore use various optimisation techniques, such as ‘sampling’, which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and financial futures. The use of such optimization techniques may increase the ex post tracking error and cause the Compartment to perform differently from that Benchmark Indicator.

- Risk related to the use of effective portfolio management techniques

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the “EPMT”) processed by the If the Compartment fails to do so, the Compartment may incur a risk in the event that the value of the guarantees received by the Compartment is insufficient. Compartment would be less than the value of the assets of the Compartment transferred to the counterparty under the EPMT concerned. This risk could materialize in particular in the event of (i) a poor valuation of the securities covered by this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the issuers' credit ratings securities received as collateral and/or (iv) market illiquidity on which the collateral received is listed.

Holder's attention is drawn to the fact that (i) EPMT s could be concluded with Société Générale (an entity of the same name group as the Management Company) and/or (ii) that Société Générale could be appointed as agent of the Compartment in the EPMT framework.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

The Compartment may use forward financial instruments ("FFIs") traded over the counter or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs may involve a range of risks, at the contract level, including (but not limited to) the following: counterparty risk, hedging event, event affecting the Benchmark Indicator, tax regime risk, regulatory risk and liquidity risk. These risks may directly affect an FFI and may lead to an adjustment or even early termination of the FFI's contract, which may affect the net asset value of the Compartment.

Investment in FFIs may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "lever effect" at the level of each transaction. A relatively limited market movement would then have a proportionally very high impact, which may be favourable or unfavourable to the Compartment.

The market value of FFIs is very volatile and can therefore be subject to significant variations.

The Compartment may use over-the-counter FFIs. Over-the-counter transactions may be less liquid than transactions traded on organized markets, where trading volumes are generally higher and prices may be more volatile.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value. "Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by the supplier of the index,
- iii) The supplier of the index is incapable of providing the level or value of the Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction (“ST”), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment’s counterparty in a future financial instrument), the Compartment’s net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST’s treatment in the methodology used by the Benchmark Indicator.

- Exchange risk linked to the Benchmark Indicator

The Compartment is exposed to the exchange risk insofar as the underlying securities comprising the Benchmark Indicator may be listed in a currency other than the currency of the Benchmark Indicator or be derived from securities listed in a currency other than the currency of the index. The fluctuations of exchange rates could therefore negatively affect the Benchmark Indicator followed by the Compartment.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the European equity markets.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one’s investments so as to avoid an exposure only to this Compartment’s risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

Activity report

The investment objective of the sub-fund is to track the performance of the MSCI EUROPE Net Total Return (Ticker:M7EU).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI Europe (DR) UCITS ETF - Dist	FR0010261198	EUR	12.76% ⁽¹⁾	12.63%		79.47%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index;
- sampling techniques or efficient portfolio management techniques.”

The Tracking Error is 0.0791% for the sub-fund. The Tracking Error target for the year was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company’s voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company’s Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company’s method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

French Funds (Fonds Communs de Placement – FCP)*, French & Luxembourgish SICAV (*) limited to European issuers.

To prevent excess cost resulting by the voting process, Lyxor votes only where its consolidated holdings represent at least 0.10% of the company's equity capital.

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership. This stake lets us influence companies to improve their ESG practices in the long term.

In terms of engagement, Lyxor joined the Climate Action 100+ initiative, committing itself to asking companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosures) recommendations.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2*)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,

- MSCI and Sustainalytics ESG research to integrate ESG issues,

- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

For an optimal voting preparation process and execution Lyxor uses a Proxy Voting Advisor.

Lyxor currently uses the services of ISS (Institutional Shareholder Services) for the implementation of its voting policy.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),

- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 7%
Orange Flag 35%
Yellow Flag 25%
Green Flag 34%

Portfolio Carbon Footprint as of October 2019

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales		
162	190	149	Portfolio rated by weight	100%
			Scope 1 reported (vs estimated)	98%
			Scope2 reported (vs estimated)	94%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	11%
Thermal Coal	1%
Natural Gaz	10%
Oil	10%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	396
Gas (MMBOE)	0.0030
Oil (MMBOE)	0.0031

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	772.2
Thermal Coal	724.0
Oil	1 358.7
Gas	967.3
Total	3 822.1

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	724.0
Oil Sands	113.4
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	837.3
Other	2 984.7

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	8.9%	7.9%	8.3%
Some efforts	85.4%	89.8%	79.0%
Limited efforts/Information	2.4%	1.6%	4.6%
No effort/No evidence	3.3%	0.6%	8.1%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

Thermal Coal	17.7%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	21%
20-49.9%	4%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	17.6%
Energy Efficiency	17.5%
Green Building	2.5%
Pollution Prevention	5.0%
Sustainable Water	6.4%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	1.0%
Energy Efficiency	1.3%
Green Building	0.4%
Pollution Prevention	0.3%
Sustainable Water	0.3%

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

In order to prevent the excessive costs inherent in the voting process, Lyxor attends general meetings when the consolidated holding represents more than 0.10% of the company's share capital. This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	446
Number of Voted Meetings	98
Participation rate at General Meetings	22.0%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Routine/Business	90.9%	8.9%	0.2%
Capitalization	88.4%	11.6%	0.0%
Non-Salary Comp.	84.7%	10.4%	4.9%

LYXOR MSCI EUROPE (DR) UCITS ETF
(compartment of the Multi Units France Sicav)

Directors Related	75.1%	18.9%	6.0%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The compensation beneficiaries represent a group of 74 persons, whose time is divided between all of the vehicles managed by Lyxor International Asset Management.

Lyxor International Asset Management	# employees	€ fixed compensation	€ variable compensation	€ total
Total population	74	6,066,070	3,896,435	9,962,505
Regulated population	20	1,813,532	1,906,435	3,719,967
Of which management teams	15	1,123,932	713,500	1,837,432
Of which other regulated people	5	689,600	1,192,935	1,882,535

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

<http://www.lyxor.com/fr/menu-corporate/nous-connaître/mentions-reglementaires/>

Lyxor's best selection and execution policy

Information on best selection and best execution policies is available on the Internet site www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

As at 31 October 2019, the CIU does not have a securities position subject to the SFTR regulations, i.e. repurchase agreements, securities or commodities lending/borrowing, purchase/resale or sale/purchase transactions, margin call lending transactions and global income swap (TRS) agreements.

However, during the financial year, the CIU had recourse to securities lending/borrowing transactions subject to the SFTR regulations which generated income in the amount of €93,062.16 from which were deducted direct and indirect operating costs/expenses in the amount of €50,110.39 borne by the Management Company and/or the Agent (where applicable).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.
- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM / Reuters on the same day of the Compartment's net asset value date.

appendix

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the “Financial instruments” item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the “Other temporary operations” item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract’s nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment;
- Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document “KIID”.

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.25% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None
Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities	The amount of the transaction	20% maximum for the Management Company; 15% maximum for the Agent

- ⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment's accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Classe of Dist equities: The Board of directors reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

appendix

LYXOR UCITS ETF MSCI Europe (the "Fund") is in no way sponsored, endorsed, sold or promoted by MSCI Inc. - Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

3.8 Commitments given and received

- 3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees **None**
3.8.2 Description of the other commitments received and/or given **None**

3.9 Other information

3.9.1 Current value of the financial instruments that are the subject of temporary acquisition:

- | | |
|--|---|
| - Financial instruments sold under forward repurchase agreements | - |
| - Other temporary operations | - |

3.9.2 Current value of the financial instruments comprising security deposits:

Financial instruments received as guarantees and not included in the balance sheet:

- | | |
|-------------------------------|---|
| - equities | - |
| - bonds | - |
| - debt securities | - |
| - other financial instruments | - |

Financial estimates given as guarantees and maintained in their original item:

- | | |
|-------------------------------|---|
| - equities | - |
| - bonds | - |
| - debt securities | - |
| - other financial instruments | - |

3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:

- | | |
|------------------|---|
| - CIU securities | - |
| - Swaps | - |

APPENDIX TO THE REPORT
intended for Swiss subscribers

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment
France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Fund, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale Paris, Zurich Branch, Talacker 50, P.O. Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the collective investment: 31-Oct

UCITS management commission: 0.25 % tax included

Average assets of the fund for the period from 01/11/18 to 31/10/19: 1,636,068,192.18

Excerpt from the income statement

Expenses in euros	Annual report 31/10/2018	Half-yearly report 30/04/2019	Annual report 31/10/2019

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

International equities.

At all times, the Lyxor MSCI USA UCITS ETF Compartment (the “Compartment”) is 60% exposed to at least one foreign equity market or to the equity markets of several countries, possibly including the French market.

The Compartment is index-based, of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Classes of Dist equities: The Board of Directors reserves the right to distribute all or part of the the amounts available for distribution and/or to capitalise it once or several times a year.

Classes of Acc and Monthly Hedged to EUR - Acc equities: Capitalisation of all the amounts available for distribution.

Management objective:

The management objective of this Compartment is to replicate the upward or downward evolution of the MSCI USA Net Total Return index (dividends reinvested) (the “Benchmark Indicator”) while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

Benchmark indicator:

The Benchmark Indicator is an equity index calculated and published by the supplier of international indices, MSCI.

The Benchmark Indicator is made up exclusively of American equities (United States) and retains the fundamental characteristics of the MSCI indices, i.e.: Adjustment of the stock market capitalization of the securities in the Benchmark Indicator on the basis of the float, and sector classification according to the GICS (Global Industry Classification Standard) classification.

The Benchmark Indicator is a “net dividends reinvested” index, which means that the Benchmark Indicator’s performance includes the dividends paid by its underlying equities.

The objective of the Benchmark Indicator is to represent 85% of the capitalization adjusted on the basis of the float, of each group of industries of the American market. By targeting 85% of the representativeness of each industry group, the Benchmark Indicator measures 85% of the market capitalization of the American market, while also reflecting the market’s economic diversity.

The MSCI methodology and its calculation method entail the Benchmark Indicator being made up of a variable number of companies.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and on the respective importance of components of the Benchmark Indicator will be available on the Internet site: www.msci.com.

The monitored performance is that of the closing prices of the Benchmark Indicator. The Benchmark Indicator is weighted by market capitalisation.

The class of Monthly Hedged to EUR - Acc equities employ a monthly-rebalanced hedging strategy that reduces the effect of a change in the exchange rate between the currency of each Benchmark Indicator component and the equities class's currency.

Benchmark indicator publication

The official MSCI indices are calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks. The Benchmark Indicator is also calculated in real time every day that the Benchmark Indicator is published.

The Benchmark Indicator's closing price is available on the MSCI Internet site: www.msci.com.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the MSCI Limited administrator of the MSCI USA Net Total Return Reference Indicator is entered in the register directors and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the GSP has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

Benchmark indicator revision

MSCI Standards indices are revised annually so as to be representative of 85% of the adjusted market capitalisation in each country and industry group.

The MSCI Standards indices are also reviewed quarterly, in order to take into account changes affecting a stock's market capitalisation (number of securities and free float) or its classification by sector. The principal changes in a company's capital structure may be implemented in real time (merger or acquisition, large rights issues or IPOs).

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy. The MSCI rules for Benchmark Indicator revision are published by MSCI and are available on the Internet site: www.msci.com.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will reach its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to reach its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The financial securities in the Compartment's assets will notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The securities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be the neutralisation of the counterparty risk resulting from the future exchange contract described above.

Information relative to the (i) updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment, are available on the page dedicated to the Compartment on the site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In this case, the manager intends to primarily use the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
 - o Subordination to the main market indices or to the Benchmark Indicator,
 - o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
 - o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).
- of diversification, notably:
 - o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
 - o Geographical area,
 - o Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

The investment on undertakings for collective investment in transferable securities ("UCITS") compliant with the Directive 2009/65/EC and/or that are eligible according to article R214-13 of the Monetary and Financial Code is limited to 10% of the assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will use Index-linked swaps traded over the counter, thereby swapping the value of the Compartment's assets (or of any other asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (in compliance with the description contained in this section's paragraph 1 above).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.

- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowing.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees.

The financial guarantees received on another form than cash will not be sold, reinvested or pledged.

The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the UCITS may recall at any time the global amount of liquidities taking into account the accrued interests;
- (iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into total return swaps on behalf of the Compartment.

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company's Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company's relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company's Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company's senior management and/or to the Société Générale group's Risk department.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets. Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's share price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment’s net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment’s manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment’s underlyings can affect the Compartment’s tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment’s net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment’s underlyings, the Compartment’s net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment’s net asset value can also be affected.

If the event persists, the Compartment’s manager will decide on measures having to be adopted, which can have an impact on the Compartment’s net asset value.

“Events affecting the Benchmark Indicator” are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market’s actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by the supplier of the index,
- iii) The supplier of the index is incapable of providing the level or value of the Benchmark Indicator,

iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Exchange risk linked to the Benchmark Indicator

The Compartment is exposed to the exchange risk insofar as the underlying securities comprising the Benchmark Indicator may be listed in a currency other than the currency of the Benchmark Indicator or be derived from securities listed in a currency other than the currency of the Benchmark Indicator. The fluctuations of exchange rates could therefore negatively affect the reference Benchmark Indicator followed by the Compartment.

- Exchange risk linked to the class of Dist and Acc equities

The abovementioned class of equities is exposed to an exchange risk to the extent that it is listed in a currency other than that of the Benchmark Indicator. The net asset value of the abovementioned class of equities can therefore decrease due to fluctuating exchange rates even though the value of the Benchmark Indicator has increased.

- Risk related to the exchange hedging specific to the class of Monthly Hedged to EUR - Acc equities

In order to hedge the exchange risk on the class of Monthly Hedged to EUR - Acc equities against the currency of each of the values comprising the index specific to the Benchmark Indicator, the Compartment uses a hedging strategy intended to reduce the impact of the evolution between the currency of each of the values comprising the Benchmark Indicator and the currency of the said equity class. This hedge nevertheless remains imperfect as a result of its monthly adjustment frequency and the employed instruments.

Subscribers concerned and typical investor profile:

The Compartment is "open to any subscriber".

An investor subscribing to this Compartment wishes to obtain an exposure to the American equities market (United States).

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

Activity report

The investment objective of the sub-fund is to track the performance of MSCI USA Net Total Return (Ticker:NDDUUS).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI USA UCITS ETF – Dist	FR0010296061	EUR	15.67% ⁽¹⁾	15.44% ⁽³⁾	-1.54% ⁽²⁾	214.72%
Lyxor MSCI USA UCITS ETF – Acc	FR0011363423	EUR	15.67% ⁽¹⁾	15.44% ⁽³⁾	-1.54% ⁽²⁾	167.34%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

⁽²⁾ “Since the Share Class NAV is not calculated in the Index currency, the share class may be exposed to currency risk.

The calculation methodology for the Foreign Exchange rate during the period is share currency/ index currency.”

⁽³⁾ “When the Benchmark Index is denominated in a currency other than the share currency, the performance of the Benchmark Index is converted into the share's currency for comparison purpose. FOREX transactions are executed on a daily basis (WM Reuters 5 pm rate on the relevant date).”

The Tracking Error is 0.0011% for the sub-fund. The Tracking Error target for the year was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533-22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

-The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

-Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),

-A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

Portfolio ESG Rating as of October 2019

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 2%
Orange Flag 28%
Yellow Flag 38%
Green Flag 32%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2019

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
74	176	180	Scope 1 reported (vs estimated)	85%
			Scope 2 reported (vs estimated)	79%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	5%
Thermal Coal	2%
Natural Gaz	3%
Oil	3%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	1
Gas (MMBOE)	0.0009
Oil (MMBOE)	0.0014

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	0.0
Thermal Coal	1.3
Oil	647.9
Gas	213.6
Total	936.4

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	1.3
Oil Sands	134.8
Shale Oil or Shale Gas	236.5
Sum High Impact Reserves	372.5
Other	563.9

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	7.4%	3.6%	2.2%
Some efforts	73.3%	87.6%	66.0%
Limited efforts/information	3.0%	2.2%	4.0%
No effort/No evidence	16.3%	6.6%	27.7%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

4.4%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	1.4%
Liquid Fuel	0.2%
Natural Gas	30.4%
Nuclear	30.5%
Renewables	6.8%
Thermal Coal	30.7%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	21%
20-49.9%	4%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	9.4%
Energy Efficiency	22.6%
Green Building	2.3%
Pollution Prevention	5.3%
Sustainable Water	3.4%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.3%
Energy Efficiency	2.3%
Green Building	0.2%
Pollution Prevention	0.2%
Sustainable Water	0.1%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:
<https://www.lyxor.com/politiques>

Lyxor's best selection and execution policy

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this assessment.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters on the same day of the Compartment's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Financial management fees and administrative fees external to the portfolio management company including tax ⁽¹⁾	Net assets	maximum 0.25% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

appendix

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Classes of Dist equities: The Board of Directors reserves the right to distribute all or part of the amounts available for distribution and/or to capitalise it once or several times a year.

Classes of Acc and Monthly Hedged to EUR - Acc equities: Capitalisation of all the amounts available for distribution.

appendix

LYXOR MSCI USA UCITS ETF (the "Compartment") is in no way sponsored, endorsed, sold or promoted by MSCI Inc. ("MSCI"), or by any MSCI subsidiary, or by any of the entities involved in the preparation of the MSCI indices. The MSCI indices are the exclusive property of MSCI and the MSCI indices are trademarks belonging to MSCI or its subsidiaries and have been the subject of a licence granted, for certain requirements, to Lyxor Asset Management. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation or calculation of the MSCI indices makes any declaration or issues any express or implicit guarantee relative to holders of the Fund's equities or more generally to the public, with regard to the timeliness of a transaction involving UCITS equities in general or the Compartment's equities in particular, or regarding the ability of any MSCI index to replicate the performance of the overall equity market. MSCI or its subsidiaries are the owners of certain names, registered trademarks and of the MSCI indices that are determined, composed and calculated by MSCI without discussion with Lyxor International Asset Management or the Fund. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices is required to take into account the needs of Lyxor International Asset Management or of the holders of the Compartment's equities when determining, composing or calculating the MSCI indices. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices makes any decision regarding the launch date, the price, the quantity of the Compartment's equities, or even the determination and calculation of the formula used to establish the Fund's net asset value. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices assumes any liability or obligation with regard to the Fund's administration, management or marketing.

THOUGH MSCI OBTAINS INFORMATION FOR INTEGRATION OR USE IN THE CALCULATION OF THE INDICES FROM SOURCES THAT MSCI CONSIDERS TO BE RELIABLE, NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OR CALCULATION OF THE MSCI INDICES GUARANTEES THE EXACTNESS AND/OR EXHAUSTIVE NATURE OF THE INDICES OR OF ANY INCLUDED DATA. NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OF A CALCULATION FOR THE MSCI INDICES GIVES ANY EXPRESS OR IMPLICIT GUARANTEE AS TO THE RESULTS THAT MAY BE OBTAINED BY THE HOLDER OF A MSCI LICENCE, THE CUSTOMERS OF THE SAID LICENSEE AS WELL AS THE COUNTERPARTIES, SHAREHOLDERS IN THE FUND OR ANY OTHER PERSON OR ENTITY, BASED ON THE USAGE OF THE INDICES OR OF ANY DATA INCLUDED WITH REGARD TO THE RIGHTS GRANTED BY LICENCE OR FOR ANY OTHER USAGE. NEITHER MSCI NOR ANY OTHER PARTY GIVES EXPRESS OR IMPLICIT GUARANTEES AND MSCI REJECTS ALL GUARANTEES REGARDING THE COMMERCIAL VALUE OR ADEQUACY FOR A SPECIFIC USAGE OF THE INDICES OR INCLUDED DATA. NOTWITHSTANDING THE ABOVE, UNDER NO CIRCUMSTANCES MAY THE LIABILITY OF MSCI OR OF ANY OTHER PARTY BE SOUGHT WITH REGARD TO ANY DAMAGES, WHETHER DIRECT, INDIRECT OR OTHER (INCLUDING THE LOSS OF EARNINGS), EVEN IN CASE OF KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES.

Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification

International equities.

At least 60% of the Lyxor MSCI World UCITS ETF Compartment (the “Compartment”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution

Classes of Dist, Monthly Hedged to EUR - Dist and Monthly Hedged to USD equities: The Board of Directors reserves the right to distribute all or part of the income and/or to capitalise it once or several times a year.

Management objective

The management objective of this Compartment is to replicate the upward or downward evolution of the MSCI World Net Total Return index (dividends reinvested) (the “Benchmark Indicator”), listed in US Dollars (USD), while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

Benchmark indicator

The Benchmark Indicator is an equities index calculated and published by the supplier of international indices, MSCI. It measures the overall performance of the developed markets. On 31 January 2018, the MSCI World Index consisted of 1,649 securities listed on the markets of 23 developed countries: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, United Kingdom and United States.

The Benchmark Indicator is comprised by bringing together the MSCI indices representing each of these 23 developed countries.

The Benchmark Indicator is a “net dividends reinvested” index, which means that the Benchmark Indicator’s performance includes the dividends paid by its underlying equities.

The weight of each security in the Benchmark Indicator is adjusted according to its stock market capitalisation, on the basis of the free-float. Consequently, the number of securities included in the composition of the basket comprising the Benchmark Indicator may change over time.

The MSCI methodology and its calculation method require the Benchmark Indicator to be made up of a variable number of companies.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator’s components will be available on the Internet site: www.msci.com.

The monitored performance is that of the closing prices of the Benchmark Indicator. The Benchmark Indicator is a weighted index by equity market capitalisation.

Benchmark indicator publication

The official MSCI indices are calculated on a daily basis at the market closing using the official closing prices of the stock exchanges of listing of securities composing the indices. The Benchmark indicator is also calculated in real time every stock exchange trading day.

The Benchmark Indicator's closing price is available on MSCI Internet site: www.msci.com.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the MSCI Limited administrator of the MSCI World Net Total Return Reference Indicator is registered in the register directors and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the GSP has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

Benchmark indicator revision and composition

The composition of the Benchmark Indicator is reviewed quarterly.

The exact composition and MSCI rules for Benchmark indicator revision are published by MSCI and are available on MSCI Internet site: www.msci.com.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment strategy.

Investment strategy

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities in the Compartment's assets will notably be securities making up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The securities basket held may be adjusted daily so that its value will be superior or equal to 100% of the Fund's net assets in most cases. Where necessary, the aim of this adjustment will be the neutralisation of the counterparty risk resulting from the future exchange contract described above.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to primarily use the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
 - o Subordination to the main market indices or to the Benchmark Indicator,
 - o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
 - o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).
- of diversification, notably:
 - o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
 - o Geographical area,
 - o Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

The investment in undertakings for collective investment in transferable securities (“UCITS”) compliant with the Directive 2009/65/EC is limited to 10% of the assets of the Compartment. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of a future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Compartment’s assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (in compliance with the description contained in this section’s paragraph 1 above).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company’s conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowing.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operation.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment’s use of forward swap contracts traded over the counter, and transactions involving the temporary purchase and sale of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees.

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into total return swaps on behalf of the Compartment.

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company's Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company's relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company's Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company's senior management and/or to the Société Générale group's Risk department.

Risk profile

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market.

The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's share price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by the supplier of the index,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid.
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Exchange risk linked to the Benchmark Indicator

The Compartment is exposed to the exchange risk insofar as the underlying securities making up the Benchmark Indicator may be listed in a currency other than the currency of the Benchmark Indicator or be derived from securities listed in a currency other than the currency of the Benchmark Indicator. The fluctuations of exchange rates could therefore negatively affect the Benchmark Indicator followed by the Compartment.

- Exchange risk linked to the classes of Dist equities

The abovementioned class of equities is exposed to an exchange risk to the extent that it is listed in a currency other than that of the Benchmark Indicator. The net asset value of the abovementioned class of equities can therefore decrease due to fluctuating exchange rates even though the value of the Benchmark Indicator has increased.

- Risk related to the exchange hedging specific to the classes of Monthly Hedged to EUR - Dist and Monthly Hedged to USD - Dist equities:

In order to hedge the exchange risk on the EUR (respectively US dollar) against the currency of each of the values comprising the index specific to the class of Monthly Hedged to EUR - Dist (respectively Monthly Hedged to USD - Dist) equities, the Compartment uses a hedging strategy intended to reduce the impact of the evolution between the currency of each of the values comprising the Benchmark Indicator and the currency of the said equity class. This hedge nevertheless remains imperfect as a result of its monthly adjustment frequency and the employed instruments; the Compartment can therefore be subject to downward market movements that will impact to the equity's net asset value. Moreover, the cost of implementing the exchange hedge will have a negative impact on the net asset value of the Monthly Hedged to EUR - Dist and Monthly Hedged to USD - Dist equities.

Subscribers concerned and typical investor profile:

The Compartment is "open to any subscriber".

An investor subscribing to this Compartment wishes to obtain an exposure to the international equities market.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2018.*
- *Compartment creation date: 6 September 2018.*

Activity report

The investment objective of the sub-fund is to track the performance of MSCI Net World TR USD (Ticker: NDDUWI).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI World UCITS ETF - Dist	FR0010315770	EUR	14.45% ⁽¹⁾	12.69% ⁽³⁾	-1.54% ⁽²⁾	135.63%
Lyxor MSCI World UCITS ETF - Monthly Hedged to EUR – Dist	FR0011660927	EUR	9.81% ⁽¹⁾	10.02% ⁽⁴⁾		48.24%
Lyxor MSCI World UCITS ETF - Monthly Hedged to USD - Dist	FR0011669845	USD	13.26% ⁽¹⁾	13.48% ⁽⁴⁾		62.93%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

⁽²⁾ “Since the Share Class NAV is not calculated in the Index currency, the share class may be exposed to currency risk.

The calculation methodology for the Foreign Exchange rate during the period is share currency/ index currency.”

⁽³⁾ “When the Benchmark Index is denominated in a currency other than the share currency, the performance of the Benchmark Index is converted into the share's currency for comparison purpose. FOREX transactions are executed on a daily basis (WM Reuters 5 pm rate on the relevant date).”

⁽⁴⁾ “The relevant benchmark for comparison is the hedged Index.”

The Tracking Error is 0.0031% for the sub-fund. The Tracking Error target for the year was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533-22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

-The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

-Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),

-A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 3%
Orange Flag 28%
Yellow Flag 33%
Green Flag 36%

			Scope 1 reported (vs estimated)	85%
			Scope2 reported (vs estimated)	80%
			Scope 1& 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	7%
Thermal Coal	2%
Natural Gaz	6%
Oil	5%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated In Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	202
Gas (MMBOE)	0.0014
Oil (MMBOE)	0.0021

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Metallurgical Coal	410.3
Thermal Coal	368.1
Oil	976.9
Gas	398.0
Total	2 209.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	368.1
Oil Sands	326.2
Shale Oil or Shale Gas	161.7
Sum High Impact Reserves	856.0
Other	1 353.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	6.8%	4.1%	3.8%
Some efforts	75.9%	88.7%	69.0%
Limited efforts/information	3.4%	2.6%	4.1%
No effort/No evidence	13.9%	4.6%	23.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

	5.0%
Power generation by fuel as maximum percentage of total (rebased at 100%)	
Hydro	7.0%
Liquid Fuel	1.2%
Natural Gas	33.7%
Nuclear	23.3%
Renewables	7.9%
Thermal Coal	26.9%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	23%
20-49.9%	4%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	12.4%
Energy Efficiency	21.7%
Green Building	3.5%
Pollution Prevention	5.5%
Sustainable Water	4.8%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.5%
Energy Efficiency	2.1%
Green Building	0.4%
Pollution Prevention	0.2%
Sustainable Water	0.1%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

LYXOR MSCI WORLD UCITS ETF
(compartment of the Multi Units France Sicav)

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

<https://www.lyxor.com/politiques>

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this assessment.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM/Reuters on the same day of the Compartment's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

appendix

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.30% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in euros.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.

APPENDIX TO THE REPORT
intended for Swiss subscribers

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment
France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Fund, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale Paris, Zurich Branch, Talacker 50, P.O. Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

International equities.

At least 60% of the Lyxor MSCI Emerging Markets UCITS ETF Compartment (the “Compartment”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution

Capitalisation of all the amounts available for distribution.

Management objective:

The management objective of this Compartment is to replicate the upward or downward evolution of the MSCI Emerging Markets Net Total Return index (net dividends reinvested) (the “Benchmark Indicator”), listed in US Dollars (USD), while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

Benchmark indicator:

The Benchmark Indicator is an equity index calculated and published by the supplier of international MSCI indices.

The Benchmark Indicator consists exclusively of securities from emerging markets and retains the fundamental characteristics of the MSCI indices, i.e.: adjustment of the market capitalisation of the securities in the index on the basis of the float and sector classification according to the GICS (Global Industry Classification Standard) classification.

The Benchmark Index provides exposure to the equity markets of 24 emerging markets (i.e., as of 31 January 2018, to the following emerging markets: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Malaysia, Mexico, Pakistan, Peru, Philippines, Poland, Qatar, Russia, South Africa, Taiwan, South Korea, Thailand, Turkey, United Arab Emirates).

The objective of the Benchmark Indicator is to represent 85% of the capitalisation that is adjusted on the basis of the float for each group of industries in the emerging markets.

By targeting 85% of the representativeness of each industry group, the Benchmark Indicator comprises 85% of the market capitalisation of the emerging markets, while also reflecting the market’s economic diversity.

The Benchmark Indicator is a "Net Total Return" index, which means that the Benchmark Indicator's performance includes the net dividends paid by its underlying equities.

The MSCI methodology and its calculation method entail the Benchmark Indicator being made up of a variable number of companies.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator’s components are available on the Internet site: www.msci.com

The monitored performance is that of the Benchmark Indicator closing prices.

Benchmark indicator publication

The Benchmark Indicator is calculated daily at the closing price using the official closing prices of the stock exchanges of listing of the constituent securities. The Benchmark Indicator is also calculated in real time for each day in the calendar of publication of the Benchmark Indicator.

The closing price of the Benchmark Indicator is available on the MSCI Internet site: www.msci.com.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the MSCI Limited director of the MSCI Emerging Markets Net Total Return Reference Index is registered in the register directors and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used, describing the measures to be implemented in the event of substantial changes to an index or termination of supply of that index.

Benchmark indicator revision and composition

The revision of the Reference Indicator takes place quarterly.

The exact composition and revision rules of the Benchmark Indicator published by MSCI are available on the Internet site: www.msci.com

The rebalancing frequency indicated above does not affect the cost of implementing the Investment strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

- o Subordination to the main market indices or to the Benchmark Indicator,
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
- o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

- of diversification, notably:

- o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- o Geographical area,
- o Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

The investment in undertaking for collective investment in transferable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Compartment’s assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (in compliance with the description contained in this section’s paragraph 1 above).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company’s conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowings

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment’s use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations.

The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;

(iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into total return swaps on behalf of the Compartment.

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company's Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company's relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company's Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company's senior management and/or to the Société Générale group's Risk department.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Risk related to low diversification of the Benchmark Indicator

The Benchmark Indicator to which the investors are exposed covers a given region, sector or strategy and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to such an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to the exposure to Emerging markets

The Compartment's exposure to emerging markets results in a greater risk of loss that would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, government restrictions on foreign investments and interruption or restriction of the convertibility or transferability of any of the currencies comprising the Benchmark Indicator.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value. "Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Exchange risk linked to the Benchmark Indicator

The Compartment is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Indicator could be listed in a currency other than that of the Benchmark Indicator, or be derivatives of securities listed in a currency other than that of the Benchmark Indicator. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

- Exchange risk linked to the Acc equities classes

The abovementioned class of equities are exposed to an exchange risk to the extent that they are listed in a currency other than that of the Benchmark Indicator. Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the Benchmark Indicator, as a result of exchange rate fluctuations.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor subscribing to this Compartment wishes to obtain an exposure to the emerging equity markets.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2018.*
- *Compartment creation date: 6 September 2018.*

Activity report

The investment objective of the sub-fund is to track the performance of the MSCI Emerging Markets Net Total Return (Ticker:NDUEEGF).

Performances over the period:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI Emerging Markets UCITS ETF - Acc EUR	FR0010429068	EUR	12.66% ⁽¹⁾	11.86% ⁽³⁾	-1.54% ⁽²⁾	56.13%
Lyxor MSCI Emerging Markets UCITS ETF - Acc USD	FR0010435297	USD	10.93% ⁽¹⁾	11.86%		19.52%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index»

⁽²⁾ “Since the Share Class NAV is not calculated in the Index currency, the share class may be exposed to currency risk.

The calculation methodology for the Foreign Exchange rate during the period is share currency/ index currency.”

⁽³⁾ “When the Benchmark Index is denominated in a currency other than the share currency, the performance of the Benchmark Index is converted into the share's currency for comparison purpose. FOREX transactions are executed on a daily basis (WM Reuters 5 pm rate on the relevant date).”

The Tracking Error is 0.0237% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533-22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

-The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

-Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),

-A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 3%
Orange Flag 9%
Yellow Flag 34%
Green Flag 54%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2019

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
322	423	318	Scope 1 reported (vs estimated)	62%
			Scope2 reported (vs estimated)	62%
			Scope 1& 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	12%
Thermal Coal	3%
Natural Gaz	9%
Oil	9%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated In Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	2 573
Gas (MMBOE)	0.0145
Oil (MMBOE)	0.0058

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

TCO2e/\$M Invested	
Metallurgical Coal	1 069.4
Thermal Coal	4 699.0
Oil	2 491.5
Gas	4 654.1
Total	12 944.8

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

TCO2e/\$M Invested	
Thermal Coal	4 699.0
Oil Sands	154.8
Shale Oil or Shale Gas	41.1
Sum High Impact Reserves	4 894.9
Other	8 049.9

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	2.1%	2.0%	3.1%
Some efforts	59.1%	80.5%	32.0%
Limited efforts/information	6.7%	9.5%	2.7%
No effort/No evidence	32.1%	8.0%	62.2%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The raw data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

6.1%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	10.7%
Liquid Fuel	2.3%
Natural Gas	27.0%
Nuclear	7.9%
Renewables	4.4%
Thermal Coal	47.8%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	30%
20-49.9%	1%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	8.9%
Energy Efficiency	29.9%
Green Building	2.2%
Pollution Prevention	2.1%
Sustainable Water	2.8%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.4%
Energy Efficiency	1.7%
Green Building	0.2%
Pollution Prevention	0.0%
Sustainable Water	0.2%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

LYXOR MSCI EMERGING MARKETS UCITS ETF
(compartment of the Multi Units France Sicav)

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

<https://www.lyxor.com/politiques>

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Compartment's net asset value date.

Posting method for the negotiation fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.55% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Capitalisation of all the amounts available for distribution.

APPENDIX TO THE REPORT
intended for Swiss subscribers

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment
France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Fund, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale, Paris, Zurich Branch, Talacker 50, PO Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the collective investment:	31-Oct	
Management commission of the fund	0.55	% including tax
Average assets of the fund for the period from 01/11/18 to 31/10/19:	1,335,664,962.69	

Excerpt from the income statement

Expenses in euros	Annual report 31/10/2018	Half-yearly report 30/04/2019	Annual report 31/10/2019
Fund management commission	1,882,907.88	3,870,779.03	7,345,433.24
Performance fee to be paid to the manager of collective investments of capital	0.00	0.00	0.00
Depository bank commission	0.00	0.00	0.00
Other expenses	0.00	0.00	0.00
Taxes	0.00	0.00	0.00
Total operating expenses	1,882,907.88	3,870,779.03	7,345,433.24

Calculation of the TER for 12 months, from 01/11/18 to 31/10/19:

TER, including performance fee

$$(7,345,433.24 / 1,335,664,962.69) * 100$$

TER 0.55 %

Performance fee as a share in percentage of the net average assets:

0.00 %

LYXOR MSCI EMERGING MARKETS UCITS ETF
(compartment of the Multi Units France Sicav) - Fiscal year closing on 31.10.2019

Performance of the Compartment

The details of the performance of the Compartment's units calculated in compliance with the principles of the Swiss Fund Association are given below:

	Annual performance from 31/10/2018 to 31/10/2019	Annual performance from 31/07/2018 to 31/10/2018	Annual performance from 31/07/2017 to 31/07/2018
LYXOR MSCI EMERGING MARKETS UCITS ETF			
Unit Acc EUR	+12.66%	-8.97%	+4.39%
Unit Acc USD	+10.93%	-11.85%	+3.59%

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

International equities.

At least 60% of the Lyxor Japan (Topix) (DR) UCITS ETF Compartment (the “Compartment”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Classes of Dist equities (EUR), Classes of Dist equities (JPY), Class of Daily Hedged to EUR – Dist equities: The Board of Directors reserves the right to distribute all or part of the income and/or to capitalize it once or several times a year.

Class of Daily Hedged to EUR - Acc equities: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment’s management objective is to replicate the upward or downward the evolution of the TOPIX® Gross Total Return index (gross dividends reinvested) (the “Benchmark Indicator”), listed in Japanese yen (JPY), while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

Benchmark indicator:

The Benchmark Indicator is an equity index calculated and published by the Tokyo Stock Exchange.

The Tokyo Stock Exchange, the main organised Japanese stock market, is divided into two Sections: The first section includes the largest listed companies in terms of market capitalisation.

The second section is dedicated to companies with smaller market capitalisations, or ones newly listed.

The Benchmark Indicator is made up of all Japanese equities listed in the First Section of the Tokyo Stock Exchange. Each equity’s weight in the Benchmark Indicator is weighted by its market capitalisation.

The Benchmark Indicator is therefore particularly representative of the Japanese economy since it is made up of a significant number of companies, which include the largest capitalisations within the market.

The Benchmark indicator is a “Gross Total Return” index, which means that the Benchmark Indicator's performance includes the gross dividends paid by its underlying equities.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator’s components will be available on the Internet site: <http://www.jpx.co.jp/english/>

The monitored performance is that of the Benchmark Indicator listed in JPY closing prices.

Benchmark Indicator publication

The monitored performance is that of the Benchmark Indicator closing prices.

The Benchmark Indicator’s closing price is available on the Internet site: <http://www.jpx.co.jp/english/>

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator Tokyo Stock Exchange of the TOPIX® Gross Total Return Benchmark Indicator has until 01.01.2020 to apply for approval or registration, if applicable.

As of the date of the last update of this prospectus, the administrator of the Benchmark Index has not yet been registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the reference indices used, describing the measures to be implemented in the event of changes to an index or discontinuance of the provision of that index.

Benchmark Indicator revision and composition

The Benchmark Indicator will be revised each time a given Japanese equity enters into the composition of the first listing section of the Tokyo Stock Exchange, or is withdrawn therefrom. The Benchmark Indicator will therefore not be revised on a periodic basis.

The exact composition of the Benchmark Indicator and rules for revising its composition as drawn up by the Tokyo Stock Exchange are available on the Internet site: <http://www.jpx.co.jp/english/>

The rebalancing frequency indicated above does not affect the cost of implementing the Investment strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will use a direct replication method, which means that the Compartment will invest mainly in securities making up the Benchmark Indicator.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by the Management Company, may decide to employ a “sampling” technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (“FFI”). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the Compartment’s tracking error.

To ensure transparency on the use of the direct index replication method (i.e. either full replication of the Benchmark Indicator) and on its consequences in terms of the assets in the Compartment’s portfolio, information on the updated composition of the basket of ‘balance sheet’ assets in the Compartment’s portfolio is available on the page dedicated to the Compartment accessible on Lyxor’s Internet site at www.lyxoretf.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned Internet site.

The www.lyxoretf.com Internet site provides a page that is dedicated to the Compartment and which among other things informs investors about the direct replication method employed (total replication of the Benchmark Indicator or sampling to reduce replication costs). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. The Compartment will be mainly invested in securities making up the Benchmark Indicator.

The investment in Undertaking for Collective Investment in Transferable Securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

On an ancillary basis, the Compartment may use FFIs traded on a regulated market or over the counter.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments within the limits and under the conditions provided for by the regulations.

The counterparty to the aforementioned forward financial instruments will not have any discretionary power over the composition of the Compartment's investment portfolio or over the underlying assets of the forward financial instruments within the limits and under the conditions provided for by regulations.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowings

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

Pursuant to its investment strategy, the Compartment may use various efficient portfolio management techniques in compliance with Article R214-18 of the French Monetary and Financial Code, including the temporary sale of securities.

Maximum proportion of assets under management which may be subjected to securities financing transactions: up to 100% of the Compartment's assets. Expected proportion of assets under management which may be subject to securities financing transactions: 10% of the Compartment's assets.

For this purpose the management company will appoint Société Générale as intermediary (hereinafter the "Agent") to provide the following services in connection with the Compartment's temporary securities transactions. If such an Agent is used it may be authorised to (i) lend securities, on the Compartment's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment's behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

As a reminder, the Management Company is an entity of the Société Générale group and is therefore linked to the Agent.

The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs.

These operating costs/expenses, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent and/or other intermediaries that are involved in these transactions.

These direct and indirect operating costs/expenses will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating costs/expenses and on the entities to which these costs/expenses are paid will be provided in the Compartment's annual report.

All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs/expenses borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect costs/expenses do not increase the Compartment's overall operating costs/expenses they have been excluded from ongoing expenses.

If necessary, the Compartment's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;
- the identity of the counterparty(ies) involved in these transactions;
- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs/expenses.

When Société Générale acts as counterparty to all transactions constituting effective portfolio management techniques, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

8. Financial guarantees

In all cases where the investment strategy used exposes the Compartment to counterparty risk, in particular in connection with temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Non-cash collateral will not be sold, reinvested or pledged.

At the manager's discretion, cash collateral may either be:

- i) Deposited in an authorised institution;
- ii) Invested in high-quality government bonds;
- iii) Used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the UCITS is able to withdraw the total amount of its cash collateral and the accrued interest at any time;
- iv) Invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

The reinvestment of cash collateral must meet the diversification requirements that apply to non-cash collateral.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

COUNTERPARTY SELECTION POLICY

Pursuant to the terms of the contract signed with the Agent (see section 7 on "Securities financing transactions"), the Management Company will select eligible counterparties for securities financing transactions on the basis of the criteria indicated below and will provide Société Générale with a list of these counterparties.

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when it enters into financial contracts (securities financing transactions) on the Compartment behalf. Counterparties for securities financing transactions and financial intermediaries are selected from among well-known and reputable intermediaries using a rigorous process that involves several criteria for assessing the quality of research services (e.g. fundamental financial analysis, information on companies, added value of staff, and the reliability of recommendations) or of execution services (e.g. access to markets and information, transaction costs, execution price, and the settlement of transactions).

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company's Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company's relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company's Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company's senior management and/or to the Société Générale group's Risk department.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument (FFI)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Risk arising from a lack of perfect replication

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly. The Compartment manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and derivatives. The use of such optimization techniques may increase the ex post tracking error and cause the Compartment to perform differently from that Benchmark Indicator.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risk related to the use of effective portfolio management techniques:

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the If the Compartment fails to do so, the Compartment may incur a risk in the event that the value of the guarantees received by the Compartment is insufficient. Compartment would be less than the value of the assets of the Compartment transferred to the counterparty under the EPMT concerned. This risk could materialize in particular in the event of (i) a poor valuation of the securities covered by this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the issuers' credit ratings securities received as collateral and/or (iv) market illiquidity on which the collateral received is listed. Holders' attention is drawn to the fact that (i) EPMT s could be concluded with Société Générale (an entity of the same name group as the Management Company) and/or (ii) that Société Générale could be appointed as agent of the Compartment in the EPMT framework.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to the use of derivative instruments

The Compartment may use forward financial instruments ("FFIs") traded over the counter or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs may involve a range of risks, at the contract level, including (but not limited to) the following: counterparty risk, hedging event, event affecting the Benchmark Indicator, tax regime risk, regulatory risk and liquidity risk. These risks may directly affect an FFI and may lead to an adjustment or even early termination of the FFI's contract, which may affect the net asset value of the Compartment.

Investment in FFIs may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "lever effect" at the level of each transaction. A relatively limited market movement would then have a proportionally very high impact, which may be favourable or unfavourable to the Compartment.

The market value of FFIs is very volatile and can therefore be subject to significant variations.

The Compartment may use over-the-counter FFIs. Over-the-counter transactions may be less liquid than transactions traded on organized markets, where trading volumes are generally higher and prices may be more volatile.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value. "Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by the supplier of the index,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the Benchmark Indicator makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Exchange risk linked to the class of Dist equities

The aforesaid equity classes are exposed to an exchange risk given that they are listed in a currency other than that of the index. Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the benchmark index, as a result of exchange rate fluctuations.

- Risk related to foreign exchange hedge

In order to cover the EUR/JPY exchange risk on the class of Daily Hedged to EUR - Dist and Daily Hedged to EUR - Acc equities, the Compartment has recourse to a hedge strategy enabling the evolution impact between the currency of the Benchmark Indicator and that of the equity class to be reduced. Owing to the daily implementation of this hedge as well as its imperfection, the Compartment may be subject to the payment of costs or downward market movements that impact the asset value of the equity.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the Japanese equity market and, more specifically, to the performance of the largest Japanese securities.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

Activity report

The investment objective of the sub-fund is to track the performance of TOPIX® Gross Total Return (Ticker:TPXDDVD).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor Japan (TOPIX) (DR) UCITS ETF - Dist EUR	FR0010245514	EUR	9.15% ⁽¹⁾	10.14% ⁽³⁾	-5.68% ⁽²⁾	51.03%
Lyxor Japan (TOPIX) (DR) UCITS ETF - Dist JPY	FR0010377028	JPY	2.95% ⁽¹⁾	3.88%		19.48%
Lyxor Japan (TOPIX) (DR) UCITS ETF - Daily Hedged to EUR - Dist	FR0011475078	EUR	2.00% ⁽¹⁾	3.22% ⁽⁴⁾		46.05%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index;
- sampling techniques or efficient portfolio management techniques.”

⁽²⁾ “Since the Share Class NAV is not calculated in the Index currency, the share class may be exposed to currency risk.

The calculation methodology for the Foreign Exchange rate during the period is share currency/ index currency.”

⁽³⁾ “When the Benchmark Index is denominated in a currency other than the share currency, the performance of the Benchmark Index is converted into the share's currency for comparison purpose. FOREX transactions are executed on a daily basis (WM Reuters 5 pm rate on the relevant date).”

⁽⁴⁾ “The relevant benchmark for comparison is the hedged Index.”

The Tracking Error is 0.2172% for the sub-fund. The Tracking Error target for the year was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533-22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

-The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

-Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),

-A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

Portfolio ESG Rating as of October 2019

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 11%
Yellow Flag 25%
Green Flag 64%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2019

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	98%
225	190	104	Scope 1 reported (vs estimated)	57%
			Scope2 reported (vs estimated)	57%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	5%
Thermal Coal	4%
Natural Gas	5%
Oil	4%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated In Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	137
Gas (MMBOE)	0.0007
Oil (MMBOE)	0.0008

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	899.1
Thermal Coal	250.7
Oil	327.5
Gas	205.3
Total	1 696.8

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Thermal Coal	250.7
Oil Sands	11.7
Shale Oil or Shale Gas	18.3
Sum High Impact Reserves	280.7
Other	1 416.1

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.9%	0.2%	2.8%
Some efforts	72.8%	85.3%	70.9%
Limited efforts/information	4.9%	14.4%	2.1%
No effort/No evidence	20.4%	0.0%	24.1%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

2.6%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	9.9%
Liquid Fuel	3.5%
Natural Gas	47.7%
Nuclear	8.0%
Renewables	0.9%
Thermal Coal	30.1%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	36%
20-49.9%	2%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	19.3%
Energy Efficiency	34.9%
Green Building	7.3%
Pollution Prevention	10.1%
Sustainable Water	10.9%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.3%
Energy Efficiency	3.6%
Green Building	0.2%
Pollution Prevention	0.3%
Sustainable Water	0.2%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

LYXOR JAPAN (TOPIX) (DR) UCITS ETF
(compartment of the Multi Units France Sicav)

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

<https://www.lyxor.com/politiques>

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at www.lyxor.com

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

As at 31 October 2019, the CIU does not have a securities position subject to the SFTR regulations, i.e. repurchase agreements, securities or commodities lending/borrowing, purchase/resale or sale/purchase transactions, margin call lending transactions and global income swap (TRS) agreements.

However, during the financial year, the CIU had recourse to securities lending/borrowing transactions subject to the SFTR regulations which generated income in the amount of JPY 25,321,840.00 from which were deducted direct and indirect operating costs/expenses in the amount of JPY 13,634,836.00 borne by the Management Company and/or the Agent (where applicable).

Effective portfolio management techniques and derivative financial instruments

1. Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.
- Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities;

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.45% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None
Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities	Amount of income generated by these operations	20% maximum for the Management Company; 15% maximum for the Agent

appendix

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment's accounting is carried out in JPY.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Classes of Dist equities (EUR), Classes of Dist equities (JPY), Class of Daily Hedged to EUR – Dist equities: The Board of Directors reserves the right to distribute all or part of the income and/or to capitalize it once or several times a year.

Class of Daily Hedged to EUR - Acc equities: Capitalisation of all the amounts available for distribution.

Unit capitalisation *	-	470.43	1,369.22	25,617	20,934.56

* The amounts of the unit distribution, the unit capitalisation and the tax credits are indicated in the accounting currency of the Compartment. The unit capitalisation corresponds to the sum of profit and loss and net capital gains or losses on the number of circulating units. This calculation method is applied since 1 January 2013.

⁽¹⁾ In pursuant to the Fiscal Instruction of 4 March 1993 of the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

APPENDIX TO THE REPORT
intended for Swiss subscribers

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment
France.

Representative of the Swiss Compartment

Société Générale, Paris, Zürich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Compartment, the KIIDs as well as the list of purchases and sales made by the Compartment during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale, Paris, Zürich Branch, Talacker 50, P.O. Box 1928, 8021 Zürich.

Calculation of the Total Expense Ratio(in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the collective investment: 31-Oct.

Management commission of the fund: 0.45 % tax included

Average fortune of the fund for the period from 01/11/18 to 31/10/19: 149,595,389,311.00

Extract from the profit and loss account

Expenses in euros	Annual report 31/10/2018	Half-yearly report 30/04/2019	Annual report 31/10/2019
Management commission of the fund	455,140,241.00	365,925,094.00	672,611,552.00
Performance fee to be paid to the manager of collective investments of capital	0.00	0.00	0.00
Custodian bank fee	0.00	0.00	0.00
Other expenses	0.00	0.00	0.00
Taxes	0.00	0.00	0.00
Total operating expenses	455,140,241.00	365,925,094.00	672,611,552.00

Calculation of the TER for 12 months, annualised, from 01/11/18 to 31/10/19:

TER including performance fee

$$(672,611,552.00 / 149,595,389,311.00) * 2.01 * 100$$

0.45 %

Performance fee as a share in percentage of the net average assets:

LYXOR JAPAN (TOPIX) (DR) UCITS ETF
(compartment of the Multi Units France Sicav) - Fiscal year closing on 31.10.2019

Performance of the Compartment

The details of the performance of the Compartment's units calculated in compliance with the principles of the Swiss Fund Association are given below:

	Annual performance from 31/10/2018 to 31/10/2019	Annual performance from 16/04/2018 to 31/10/2018	Annual performance from 17/04/2017 to 16/04/2018
LYXOR JAPAN (TOPIX) (DR) UCITS ETF			
Unit Dist EUR	+9.15%	-1.01%	+4.61%
Unit Dist JPY	+2.95%	-4.57%	+20.10%
Unit Daily Hedged to EUR - Dist	+2.00%	-5.39%	+19.18%
TOPIX TR Index (JPY)			
Unit Dist EUR	+10.14%	-4.21%	+20.96%
Unit Dist JPY	+3.88%	-4.21%	+20.96%
Unit Daily Hedged to EUR - Dist	+3.22%	-4.21%	+20.96%

Past performances are no indicator of future performances. The performances indicated here do not take into account the impact of possible subscription and redemption commissions and costs of Compartment units.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

French equities.

At least 60% of the Lyxor CAC 40 (DR) UCITS ETF Compartment (“the Compartment”) is permanently exposed in at least a French equity market. The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Dist and J-EUR equity classes: The Board of directors reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Acc equity class: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment’s management objective is to reproduce, both upwards and downwards, the evolution of the evolution of the CAC 40 GROSS TOTAL RETURN index (gross dividends reinvested) (the “Benchmark Indicator”) listed in euros, while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.05%.

Benchmark indicator:

The Benchmark Indicator is a free floating-weighted market capitalisation index measuring the performance of 40 stocks listed on the regulated markets of Euronext Paris.

Eligible stocks are chosen for their large market capitalisation, their sector representativeness and the large volume of transactions concerning them. The Paris Bourse's main benchmark, its movements are highly correlated with those of the market as a whole.

The Benchmark Indicator is a "Gross Total Return" index, which means that the Benchmark Indicator's performance includes the gross dividends paid by its underlying equities.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator’s components will be available on the Internet site: The monitored performance is that of the closing price of the Benchmark Indicator.

Benchmark indicator publication

The Benchmark Indicator is calculated daily at closing prices using the official closing prices of the stock exchanges on which the constituent securities are listed. The Benchmark Indicator is also calculated in real time each day belonging to the Benchmark Indicator publication calendar.

The Benchmark Indicator’s closing price is available on the Internet site: <https://www.euronext.com/en>

In accordance with Article 52 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext Administrator of the CAC 40 GROSS TOTAL RETURN benchmark Indicator has until 01.01.2020 to apply for approval or registration, as the case may be.

As of the date of the last update of this prospectus, the administrator of the Reference Index has not yet been registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

Benchmark indicator revision and composition

The composition of the Parent Index is reviewed quarterly.

The exact composition and revision rules of the Benchmark Indicator published by Euronext as well as information on the composition of the Benchmark Indicator are available on the website: <https://www.euronext.com/>.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the direct replication method, which means that the Compartment will invest mainly in securities making up the Benchmark Indicator.

The Compartment may use efficient portfolio management techniques in accordance with the provisions of Article R214-18 of the French Monetary and Financial Code and, in particular, may enter into transactions involving the temporary sale of financial securities under the conditions described below.

On an ancillary basis, and always with the aim of seeking the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also enter into forward financial instrument ("FFI") contracts. The FFIs entered into in this context may in particular be index futures contracts and/or hedging swaps entered into in order to minimise the level of tracking error of the Compartment.

The Internet site www.lyxoretf.com has a page dedicated to the Compartment, which allows investors to benefit from transparency on the direct replication method used (full replication of the Benchmark Indicator or sampling to limit replication costs). The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned Internet site.

This 20% limit will be checked on each rebalancing date of the Benchmark Indicator, in application of the Benchmark Indicator's calculation method that limits the exposure to each equities of a single issuing entity to 20%, and for which the calculation is carried out by the sponsor or the calculation agent of the Benchmark Indicator. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument or of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

The Compartment is eligible with the PEA. The Compartment complies at all times with the asset constraints allowing it to be acquired within the framework of a PEA (Equity Savings Plan), i.e. the holding of more than 75% of the equities of companies that have their registered office in a Member State of the European Union or in another State party to the Agreement on the European Economic Area that has concluded a tax treaty with France that contains an administrative assistance clause to combat tax fraud and tax evasion.

The Compartment may be used as the basis for unit-linked life insurance policies. In this case, the Manager intends to use mainly the following assets :

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold financial instruments of any kind in accordance with the ratios laid down in the regulations.

The Compartment will be mainly invested in equities making up the Benchmark Indicator.

Investment in the assets of undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net asset. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment may subscribe units or equities of UCITS managed by the Management Company or a company with which it is affiliated.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

In order to optimise the management of the Compartment in the future, the Manager reserves the right to use other instruments within the limits of the regulations in order to achieve its management objective.

3. Off-balance sheet assets (derivative instruments)

On an ancillary basis, and always with the aim of seeking the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also enter into forward financial instrument ("FFI") contracts. The FFIs entered into in this context may in particular be index futures contracts and/or hedging swaps entered into in order to minimise the level of tracking error of the Compartment.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to FFI, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

The Compartment may use efficient portfolio management techniques in accordance with the provisions of Article R214-18 of the Monetary and Financial Code, in particular through transactions involving the temporary sale of financial securities.

- Maximum proportion of assets under management which may be subjected to securities financing transactions: up to 25% of the Compartment's assets.
- Expected proportion of assets under management which may be subject to securities financing transactions: 10% of the Compartment's assets.

For this purpose the management company will appoint Société Générale (hereinafter the "Agent") to provide the following services in connection with the Compartment's temporary securities transactions. If such an Agent is used it may be authorised to (i) lend securities, on the Compartment's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment's behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

As a reminder, the Management Company is an entity of the Société Générale group and is therefore linked to the Agent.

The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs/expenses.

These operating costs/expenses, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent and/or other intermediaries that are involved in these transactions.

These direct and indirect operating costs/expenses will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating expenses and on the entities to which these costs/expenses are paid will be provided in the annual report of Multi Units France Sicav.

All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect costs do not increase the Compartment's overall operating costs/expenses they have been excluded from ongoing expenses.

If necessary, the annual report of Multi Units France Sicav will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;
- the identity of the counterparty(ies) involved in these transactions;
- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs or expenses.

When Societe Generale acts as counterparty to all operations constituting efficient portfolio management techniques, situations of conflicts of interest may arise between the Management Company and Societe Generale, such situations are governed by the Management Company's conflict of interest management policy.

8. Financial guarantees

In all cases where the investment strategy used exposes the Compartment to counterparty risk, in particular in connection with temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt to the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to or traded on a regulated market of an EU Member State, on a stock exchange of an OECD Member State or on a stock exchange of another country provided that conditions (a) to (e) (above) are fully complied with and that such equities are included in a first-rate index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

The financial guarantees received on another form than cash will not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the Compartment may recall at any time the global amount of liquidities taking into account the accrued interests;
- (iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

COUNTERPARTY SELECTION POLICY

Pursuant to the terms of the contract signed with the Agent (see section 7 on “Securities financing transactions”), the Management Company will select eligible counterparties for securities financing transactions on the basis of the criteria indicated below and will provide Société Générale with a list of these counterparties.

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when it enters into financial contracts (securities financing transactions) on the Compartment behalf. Counterparties for securities financing transactions and financial intermediaries are selected from among well-known and reputable intermediaries using a rigorous process that involves several criteria for assessing the quality of research services (e.g. fundamental financial analysis, information on companies, added value of staff, and the reliability of recommendations) or of execution services (e.g. access to markets and information, transaction costs, execution price, and the settlement of transactions).

Only financial institutions based in an OECD country are selected and only after a thorough analysis based on the specific criteria of the Management Company’s Risks department, which include, for example, financial stability, credit rating, risk exposure, credit spread, nature of business activity and track record.

The list of authorized counterparties is reviewed monthly and possibly more frequently in the event of a market shock. It involves different departments (management, risks, operations and support) of the Management Company. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company’s Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company’s senior management and/or to the Société Générale group’s Risk department.

Risk profile:

The shareholder’s money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument (FFI)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risk related to the use of efficient portfolio management techniques:

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the If the Compartment fails to do so, the Compartment may incur a risk in the event that the value of the guarantees received by the Compartment is insufficient. Compartment would be less than the value of the assets of the Compartment transferred to the counterparty under the EPMT concerned. This risk could materialize in particular in the event of (i) a poor valuation of the securities covered by this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the issuers' credit ratings securities received as collateral and/or (iv) market illiquidity on which the collateral received is listed.

Holders' attention is drawn to the fact that (i) EPMT s could be concluded with Société Générale (an entity of the same name group as the Management Company) and/or (ii) that Société Générale could be appointed as agent of the Compartment in the EPMT framework.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially reached

Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Risk related to the use of derivative instruments

The Compartment may use forward financial instruments ("FFIs") traded over the counter or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs may involve a range of risks, at the contract level, including (but not limited to) the following: counterparty risk, hedging event, event affecting the Benchmark Indicator, tax regime risk, regulatory risk and liquidity risk. These risks may directly affect an FFI and may lead to an adjustment or even early termination of the FFI's contract, which may affect the net asset value of the Compartment.

Investment in FFIs may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "lever effect" at the level of each transaction. A relatively limited market movement would then have a proportionally very high impact, which may be favourable or unfavourable to the Compartment.

The market value of FFIs is very volatile and can therefore be subject to significant variations.

The Compartment may use over-the-counter FFIs. Over-the-counter transactions may be less liquid than transactions traded on organized markets, where trading volumes are generally higher and prices may be more volatile.

Eligible subscribers and typical investor profile:

Acc and Dist equities of the Compartment are open to any subscriber.

J-EUR equities are open to any subscriber but are more particularly dedicated to institutional investors.

Investors subscribing to this Compartment wish to gain exposure to the French equity markets.

The amount that it is reasonable to invest in this Compartment depends on the personal situation of each investor. To determine this amount, the investor should take into account his personal wealth and/or assets, his current and five-year financial needs, as well as his desire to take risks or, on the contrary, to favour a prudent investment. It is also recommended to diversify one's investments sufficiently so as not to expose them solely to the risks of this Compartment.

All investors are therefore invited to study their particular situation with their usual wealth management advisor. The recommended minimum investment period is more than 5 years.

“U.S. Persons” (as defined below - see “COMMERCIAL ORDER INFORMATION”) may not invest in the Compartment.

Information: This exercise has an exceptional duration of 3 months.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available at the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The full compartment prospectus and the latest annual and periodical documents are sent within one week upon written request by the holder to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Date of creation of the Multi Units France Sicav: 4 March 2002.*
- *Date of approval by the AMF: 1 December 2000, modified on 15 November 2001.*
- *Date of approval of the transformation of the MF: 7 November 2003.*
- *Date of AMF approval of the Compartment: 6 June 2018.*
- *Date of creation of the Fund: 13 December 2000.*
- *Date of creation of the Compartment: 5 September 2019.*

Activity report

The fund replicates the performance of the CAC 40 GROSS TOTAL RETURN (Ticker: CACR).

Performances over the period:

Share name	ISIN	Share currency	Performance from 31/07/19 to 31/10/19		Share performance since inception
			Share	Index	
Lyxor CAC 40 (DR) UCITS ETF - Dist	FR0007052782	EUR	3.94% ⁽¹⁾	3.97%	66.23%
Lyxor CAC 40 (DR) UCITS ETF - J-EUR	FR0011122233	EUR	3.94% ⁽¹⁾	3.97%	150.12%
Lyxor CAC 40 (DR) UCITS ETF - Acc	FR0013380607	EUR	3.94% ⁽¹⁾	3.97%	20.59%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index;
- sampling techniques or efficient portfolio management techniques.”

The Tracking Error is 0.0508% for the sub-fund. The Tracking Error target for the year was 0.05%.

The realized tracking error level is above the anticipated tracking error level. This difference is considered as immaterial.

With regards to Tracking error computation, performance until 06/09/19 corresponds to performance of Lyxor CAC 40 (DR) UCITS ETF. This fund was absorbed by the fund on 06/09/19.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

The sub-fund is the result of a merger/absorption. The performances mentioned in the report are calculated from the inception date of the absorbed fund.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1*-a)

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

French Funds (Fonds Communs de Placement – FCP)*, French & Luxembourgish SICAV (*) limited to European issuers.

To prevent excess cost resulting by the voting process, Lyxor votes only where its consolidated holdings represent at least 0.10% of the company's equity capital.

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership. This stake lets us influence companies to improve their ESG practices in the long term.

In terms of engagement, Lyxor joined the Climate Action 100+ initiative, committing itself to asking companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosures) recommendations.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2*)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,
- MSCI and Sustainalytics ESG research to integrate ESG issues,
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results (reference III-3*a)

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

For an optimal voting preparation process and execution Lyxor uses a Proxy Voting Advisor.

Lyxor currently uses the services of ISS (Institutional Shareholder Services) for the implementation of its voting policy.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2*-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

•The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

•Potential emissions from these same known reserves of fossil fuels (expressed in tCO2e / \$ M invested),

•A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

•Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

•Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

Portfolio ESG Rating as of October 2019

ESG score	Environmental	Social	Governance
5.5	6.2	4.9	5.7

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 32%
Yellow Flag 48%
Green Flag 22%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2019

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
216	239	150	Scope 1 reported (vs estimated)	99%
			Scope 2 reported (vs estimated)	99%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	12%
Thermal Coal	0%
Natural Gaz	11%
Oil	11%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0036
Oil (MMBOE)	0.0040

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	234.0
Thermal Coal	0.0
Oil	1 796.2
Gas	1 170.4
Total	3 200.5

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	342.1
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	342.1
Other	2 858.4

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	3.2%	13.7%	14.7%
Some efforts	96.2%	86.3%	77.2%
Limited efforts/information	0.0%	0.0%	2.8%
No effort/No evidence	0.6%	0.0%	5.3%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The raw data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

12.5%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	19.4%
Liquid Fuel	2.2%
Natural Gas	44.9%
Nuclear	11.1%
Renewables	11.0%
Thermal Coal	11.4%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	29%
20-49.9%	8%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	25.1%
Energy Efficiency	17.8%
Green Building	6.2%
Pollution Prevention	7.5%
Sustainable Water	7.1%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	1.1%
Energy Efficiency	1.9%
Green Building	0.7%
Pollution Prevention	0.2%
Sustainable Water	0.4%

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

In order to prevent the excessive costs inherent in the voting process, Lyxor attends general meetings when the consolidated holding represents more than 0.10% of the company's share capital. This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	39
Number of Voted Meetings	38
Participation rate at General Meetings	97.4%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Routine/Business	94.9%	4.6%	0.5%
Non-Salary Comp.	82.7%	11.2%	5.8%
Directors Related	86.1%	13.9%	0.0%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:
<https://www.lyxor.com/politiques>

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at www.lyxor.com

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

As at 31 October 2019, the CIU does not have a securities position subject to the SFTR regulations, i.e. repurchase agreements, securities or commodities lending/borrowing, purchase/resale or sale/purchase transactions, margin call lending transactions and global income swap (TRS) agreements.

However, during the financial year, the CIU had recourse to securities lending/borrowing transactions subject to the SFTR regulations which generated income in the amount of €4,411.11 from which were deducted direct and indirect operating costs/expenses in the amount of €2,374.21 borne by the Management Company and/or the Agent (where applicable).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Information: This exercise has an exceptional duration of 3 months.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the date of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the net asset value calculation date. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the net asset value calculation date. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities for operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published by the WM Reuters on the same day of the closing date of the Compartment's net asset value.

Posting method for the negotiation fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.
- Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative fees external to the management company, including tax ⁽¹⁾	Net assets	maximum 0.25% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transfer commission	Collection on each transaction	None
Outperformance commission	Net assets	None
Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities	The amount of the transaction	20% maximum for the Management Company 15% maximum for the Agent

appendix

⁽¹⁾ including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

Accounting currency

The Compartment's accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually (*Not certified by the auditor*)

- Occurred change:
 - The MF was absorbed by the SICAV on 5 September 2019.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Dist and J-EUR equity classes: The Board of directors reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Acc equity class: Capitalisation of all the amounts available for distribution.

appendix

LYXOR CAC 40 (DR) UCITS ETF does not benefit in any way whatsoever from the sponsorship, support, promotion or sale of LYXOR CAC 40 (DR) UCITS ETF by Euronext or its subsidiaries (hereinafter referred to as "Euronext") (collectively referred to as the "Holders").

The Holders make no warranty or representation, either express or implied, either as to the results to be obtained from the use of the CAC 40 GROSS TOTAL RETURN index (hereinafter "the Index") and/or the level at which the said Index stands at any given time and on any given day or of any other type. The Index is calculated by or on behalf of Euronext. The Holders will not be liable (whether through negligence or otherwise) for any error affecting the Index in respect of any person and will not be under any obligation to inform any person of any error affecting the Index.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR EURO STOXX 50 (DR) UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR EURO STOXX 50 (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Eurozone countries equities.

At least 60% of the Lyxor Euro Stoxx 50 (DR) UCITS ETF Compartment (the "Compartment") is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Class of Dist, K-EUR, J-EUR, Daily Hedged to USD - Dist, Daily Hedged to GBP - Dist, Daily Hedged to CHF - Dist equities: The Board of directors reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Class of Acc, Daily Hedged to USD - Acc, Daily Hedged to GBP - Acc, Daily Hedged to CHF - Acc equities: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment's management objective is to replicate the performance, whether positive or negative, of the EURO STOXX 50® NET RETURN index (net dividends reinvested) (the "Benchmark Indicator"), listed in euros and representative of the performance of 50 blue chips in the Eurozone market, while minimizing the tracking error between the Compartment's performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

Benchmark indicator:

The Benchmark Indicator is a subset of the EURO STOXX index. It is composed of the 50 most important securities of the Eurozone member countries. These securities are chosen for their equity market capitalisation, their liquidities and their sector-based representativeness. The Benchmark Indicator strives to maintain a weighting per country and per economic sector that, insofar as possible, reflects the economic structure of the Eurozone.

Benchmark indicator publication

The composition of the Benchmark Indicator is reviewed each year.

The Benchmark Index is a "Net Return" index, i.e. which means that the Benchmark Indicator's performance includes the net dividends paid by its underlying equities.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available on the Internet site at: <http://www.stoxx.com/indices/>.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment strategy.

In accordance with Article 52 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the STOXX administrator of the EURO STOXX 50® NET RETURN index has until 01.01.2020 to apply for approval or registration, if applicable.

As of the date of the last update of this prospectus, the administrator of the Reference Index has not yet been registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the reference indices used, describing the measures to be implemented in the event of changes to an index or discontinuance of the provision of that index.

Benchmark indicator revision and composition

The monitored performance is that of the closing prices of the index.

The complete methodology is available on the Internet site at: www.stoxx.com/indices/

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will use a direct replication method, which means that the Compartment will invest mainly in securities making up the Benchmark Indicator.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by the Management Company, may decide to employ a “sampling” technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (“FFI”). These transactions could for example be futures contracts on indices and/or hedging swaps in particular to minimise the Compartment’s tracking error.

To ensure transparency on the use of the direct index replication method (i.e. either full replication of the Benchmark Indicator or sampling to limit replication costs) and on its consequences in terms of the assets in the Compartment’s portfolio, information on the updated composition of the basket of balance sheet assets in the Compartment’s portfolio is available on the page dedicated to the Compartment accessible on Lyxor’s internet site at www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

The Compartment will invest permanently at least of 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the treaty on the European Economic Area and that has signed with France a tax agreement containing an administrative assistance clause for the purposes of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. The Compartment will be mainly invested in securities making up the Benchmark Indicator.

The investment in undertakings for collective investment in transferable securities (“UCITS”) compliant with the Directive 2009/65/EC is limited to 10% of the assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

On an ancillary basis, the Compartment may use FFIs traded on a regulated market or over the counter.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to FFIs, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowing.

7. Temporary securities acquisition and sale operations

The Compartment may have recourse to various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French Monetary and Financial Code and in particular temporary securities sale operations.

- Maximum proportion of assets under management which may be subjected to securities financing transactions: up to 25% of the Compartment's assets.

- Expected proportion of assets under management which may be subject to securities financing transactions: 10% of the Compartment's assets.

For this purpose the management company will appoint Société Générale as intermediary (hereinafter the "Agent") to provide the following services in connection with the Compartment's temporary securities transactions. If such an Agent is used it may be authorised to (i) lend securities, on the Compartment's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment's behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

As a reminder, the Management Company is an entity of the Société Générale group and is therefore linked to the Agent.

The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs/fees.

These operating costs/fees, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent and/or other intermediaries that are involved in these transactions.

These direct and indirect operating costs/fees will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating costs/fees and on the entities to which these expenses are paid will be provided in the Compartment's annual report.

All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs/fees borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect costs/fees do not increase the Compartment's overall operating expenses they have been excluded from ongoing expenses. If necessary, the Compartment's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;
- the identity of the counterparty(ies) involved in these transactions;
- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs or expenses.

When Societe Generale acts as counterparty to all operations constituting efficient portfolio management techniques, situations of conflicts of interest may arise between the Management Company and Societe Generale, such situations are governed by the Management Company's conflict of interest management policy.

8. Financial guarantees

In all cases where the investment strategy used exposes the Compartment to counterparty risk, in particular in connection with temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and

such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees.

The financial guarantees received on another form than cash will not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- i) Deposited in an authorised institution;
- ii) Invested in high-quality government bonds;
- iii) Used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the UCITS is able to withdraw the total amount of its cash collateral and the accrued interest at any time;
- iv) Invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

The reinvestment of cash collateral must meet the diversification requirements that apply to non-cash collateral.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

Pursuant to the terms of the contract signed with the Agent (see section 7 on “Securities financing transactions”), the Management Company will select eligible counterparties for securities financing transactions on the basis of the criteria indicated below and will provide Société Générale with a list of these counterparties.

The Management Company selects its financial intermediaries and counterparties in accordance with a strict policy, particularly when it enters into financial contracts (securities financing transactions) on the Compartment behalf. Counterparties for securities financing transactions and financial intermediaries are selected from among well-known and reputable intermediaries using a rigorous process that involves several criteria for assessing the quality of research services (e.g. fundamental financial analysis, information on companies, added value of staff, and the reliability of recommendations) or of execution services (e.g. access to markets and information, transaction costs, execution price, and the settlement of transactions).

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company’s Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company’s relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company’s Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company’s senior management and/or to the Société Générale group’s Risk department.

Risk profile:

The shareholder’s money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for future financial instrument (“FFI”) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Risk arising from a lack of perfect replication

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly. The Compartment manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and derivatives. The use of such optimization techniques may increase the ex post tracking error and cause the Compartment to perform differently from that Benchmark Indicator.

- Liquidity risk on a place of listing

The Compartment's share price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risk related to the use of effective portfolio management techniques:

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the If the Compartment fails to do so, the Compartment may incur a risk in the event that the value of the guarantees received by the Compartment is insufficient. Compartment would be less than the value of the assets of the Compartment transferred to the counterparty under the EPMT concerned. This risk could materialize in particular in the event of (i) a poor valuation of the securities covered by this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the issuers' credit ratings securities received as collateral and/or (iv) market illiquidity on which the collateral received is listed. Holders' attention is drawn to the fact that (i) EPMT s could be concluded with Société Générale (an entity of the same name group as the Management Company) and/or (ii) that Société Générale could be appointed as agent of the Compartment in the EPMT framework.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment can enter into transactions involving over-the-counter Future Financial Instrument (FFI), such as swaps, in order to secure the performance of the Benchmark Indicator. These FFI involve various risks, such as These FFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Indicator disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect an FFI and may require an adjustment of the FFI transaction or even its premature termination, which could adversely affect the Compartment's net asset value.

Investing in FFIs may involve a high level of risk. The amount required to trade in some FFIs is potentially much less than the exposure obtained through these instruments, which implies a "leverage effect" at the level of each transaction. A relatively small market movement would then have a proportionately very high impact, which may be favourable or unfavourable to the Compartment.

The market value of FFIs is highly volatile and may therefore be subject to wide fluctuations.

The Compartment may use over-the-counter (OTC) FFIs. OTC transactions may be less liquid than transactions traded on organized markets, where trading volumes are generally higher and prices may be more volatile.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value. "Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution;
- ii) The Benchmark Indicator is definitively discontinued by the supplier of the index;
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator;
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost;
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid.
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Risk related to the exchange hedging specific to the Daily Hedged to USD - Acc and Dist equities classes:

In order to hedge the USD/EUR exchange risk on the class of Daily Hedged Daily Hedged to USD - Dist and Daily Hedged to USD - Acc equities, the Compartment uses a hedging strategy intended to reduce the impact of the evolution between the currency of the Benchmark Indicator and the currency of the equity class. Because of the daily implementation of this hedge and of its imperfection, Daily Hedged to USD - Acc and Daily Hedged to USD - Dist equities classes can therefore be subject to downward market movements that will impact on the unit's net asset value.

- Risk related to the exchange hedging specific to the Daily Hedged to GBP - Acc and GBP - Dist equities classes:

In order to hedge the GBP/EUR exchange risk on the class of Daily Hedged to GBP - Dist and Daily Hedged to GBP - Acc equities, the Compartment uses a hedging strategy intended to reduce the impact of the evolution between the currency of the Benchmark Indicator and the currency of the equity class.

Because of the daily implementation of this hedge and of its imperfection, Daily Hedged to GBP - Acc and Daily Hedged to GBP - Dist equities classes can therefore be subject to downward market movements that will impact on the unit's net asset value.

- Risk related to the exchange hedging specific to the Daily Hedged to CHF - Acc and CHF - Dist equities classes:

In order to hedge the CHF/EUR exchange risk on the class of Daily Hedged to CHF - Dist and Daily Hedged to CHF - Acc equities, the Compartment uses a hedging strategy intended to reduce the impact of the evolution between the currency of the Benchmark Indicator and the currency of the equity class. Because of the daily implementation of this hedge and of its imperfection, Daily Hedged to CHF - Acc and Daily Hedged to CHF - Dist equities classes can therefore be subject to downward market movements that will impact on the unit's net asset value.

Subscribers concerned and profile of the typical investor:

The Compartment is open to any subscriber.

The classes of J-EUR, K-EUR equities are intended for institutional investors whose initial subscription is at least equal to 100,000 Euros.

Class K-EUR and J-EUR shareholders must hold on each Net Asset Value date a minimum of \$100,000 Euros of shares or buy back their entire position in the K-EUR and J-EUR shares.

The investor subscribing to this Compartment wishes to gain exposure to the equity markets of the Euro zone.

The amount that it is reasonable to invest in this Compartment depends on the personal situation of each investor. In determining this, the investor will have to take into account his wealth and/or personal assets, his current and five-year money needs, but also his desire to take risks or, on the contrary, to favour a prudent investment. It is also recommended to sufficiently diversify its investments in order to avoid exposing them solely to the risks of this Compartment.

All investors are therefore invited to study their particular situation with their usual wealth management advisor. The recommended minimum investment period is more than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

The net asset value is available at the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The complete compartment prospectus and the latest annual and periodical documents are sent within one week upon written request by the holder to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.

Activity report

The investment objective of the sub-fund is to track the performance of EURO STOXX 50® NET RETURN (Ticker: SX5T).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor EURO STOXX 50 (DR) UCITS ETF - Dist	FR0007054358	EUR	16.47% ⁽¹⁾	15.91%		41.69%
Lyxor EURO STOXX 50 (DR) UCITS ETF - Daily Hedged to CHF - Acc	FR0012399731	CHF	15.89% ⁽¹⁾	15.63% ⁽²⁾		9.49%
Lyxor EURO STOXX 50 (DR) UCITS ETF - Daily Hedged to GBP - Acc	FR0012399772	GBP	17.28% ⁽¹⁾	17.04% ⁽²⁾		25.95%
Lyxor EURO STOXX 50 (DR) UCITS ETF - Daily Hedged to USD - Acc	FR0012399806	USD	19.89% ⁽¹⁾	19.52% ⁽²⁾		50.37%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index;
- income related to securities financial transactions;
- sampling techniques or efficient portfolio management techniques.”

⁽²⁾ “The relevant benchmark for comparison is the hedged Index.”

The Tracking Error is 0.1818% for the sub-fund. The Tracking Error target for the year was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company’s voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company’s Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company’s method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

French Funds (Fonds Communs de Placement – FCP)*, French & Luxembourgish SICAV (*) limited to European issuers.

To prevent excess cost resulting by the voting process, Lyxor votes only where its consolidated holdings represent at least 0.10% of the company's equity capital.

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership. This stake lets us influence companies to improve their ESG practices in the long term.

In terms of engagement, Lyxor joined the Climate Action 100+ initiative, committing itself to asking companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosures) recommendations.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,
- MSCI and Sustainalytics ESG research to integrate ESG issues,
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

For an optimal voting preparation process and execution Lyxor uses a Proxy Voting Advisor.

Lyxor currently uses the services of ISS (Institutional Shareholder Services) for the implementation of its voting policy.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 4%
Orange Flag 41%
Yellow Flag 37%
Green Flag 18%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2019

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
137	162	198	Scope 1 reported (vs estimated)	99%
			Scope2 reported (vs estimated)	97%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	12%
Thermal Coal	0%
Natural Gaz	12%
Oil	12%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0032
Oil (MMBOE)	0.0031

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	1 361.4
Gas	1 040.0
Total	2 401.3

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	178.9
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	178.9
Other	2 222.4

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	5.2%	9.5%	18.1%
Some efforts	94.8%	90.5%	76.1%
Limited efforts/information	0.0%	0.0%	6.9%
No effort/No evidence	0.0%	0.0%	0.8%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The raw data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

11.4%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	21.1%
Liquid Fuel	4.5%
Natural Gas	36.0%
Nuclear	11.9%
Renewables	13.3%
Thermal Coal	13.3%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	24%
20-49.9%	7%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	24.2%
Energy Efficiency	23.4%
Green Building	2.2%
Pollution Prevention	4.6%
Sustainable Water	8.1%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	1.2%
Energy Efficiency	2.1%
Green Building	0.1%
Pollution Prevention	0.1%
Sustainable Water	0.1%

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

In order to prevent the excessive costs inherent in the voting process, Lyxor attends general meetings when the consolidated holding represents more than 0.10% of the company's share capital. This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	0
Number of Voted Meetings	0
Participation rate at General Meetings	0.0%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
------------	-----	---------	------------

Breakdown by country

In 2019, the Lyxor' voting scope was the European issuers.

The data details the geographical distribution of the General Meetings at which the Lyxor EURO STOXX 50 (DR) UCITS ETF fund participated during the financial year.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

<https://www.lyxor.com/politiques>

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at www.lyxor.com

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

As at 31 October 2019, the CIU does not have a securities position subject to the SFTR regulations, i.e. repurchase agreements, securities or commodities lending/borrowing, purchase/resale or sale/purchase transactions, margin call lending transactions and global income swap (TRS) agreements.

However, during the financial year, the CIU had recourse to securities lending/borrowing transactions subject to the SFTR regulations which generated income in the amount of €65,921.67 from which were deducted direct and indirect operating costs/expenses in the amount of €35,496.28 borne by the Management Company and/or the Agent (where applicable).

Effective portfolio management techniques and derivative financial instruments

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this assessment.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM/Reuters on the same day of the Compartment's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment;
- Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities;

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative fees external to the portfolio management company including tax ⁽¹⁾	Net assets	maximum 0.20% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None
Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities	The amount of the transaction	20% maximum for the Management Company; 15% maximum for the Agent

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually (*Not certified by the auditor*)

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Class of Dist, K-EUR, J-EUR, Daily Hedged to USD - Dist, Daily Hedged to GBP - Dist, Daily Hedged to CHF - Dist equities: The Board of directors reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Class of Acc, Daily Hedged to USD - Acc, Daily Hedged to GBP - Acc, Daily Hedged to CHF - Acc equities: Capitalisation of all the amounts available for distribution.

appendix

STOXX and its Licensors have no other relationship with the license-holder than through the license granted in respect of EURO STOXX 50[®] NET RETURN index and the associated trade marks for the purpose of using them with the Compartment.

STOXX and its licensors:

- Make no representation or warranty concerning the merits of trading in the shares or units of the Compartment, which they shall also refrain from selling or promoting.
 - Make no investment recommendation to anyone whomsoever with respect to the Compartment or other recommendation of any type whatsoever.
 - Shall not be held responsible or liable nor have any obligation in respect of the issuance, number or pricing of the Compartment, and will make no decisions in relation to this.
 - Shall not be held responsible or liable nor have any obligation in respect of the administration, management or marketing of the Compartment.
 - Have no obligation to take into account the needs or requirements of the Compartment or of its shareholders or unit-holders, to determine, compose or calculate the EURO STOXX 50[®] NET RETURN index.
- STOXX its Licensors decline any responsibility in relation to the Compartment. More specifically,
- STOXX and its Licensors do not make or ensure any guarantee whatsoever, either expressed or implied, concerning:
 - The results that may be obtained by the Compartment, by the share-holders or unit-holders of the Compartment or by anyone who directly or indirectly uses the EURO STOXX 50[®] NET RETURN index or its data.
 - The accuracy or completeness of the EURO STOXX 50[®] NET RETURN index and of the data it contains.
 - The negotiability of the EURO STOXX 50[®] NET RETURN index and its date and their appropriateness for a specific use or purpose.
 - STOXX and its Licensors shall not be held liable for any error, omission or interruption whatsoever in the EURO STOXX 50[®] NET RETURN index or in its data.
 - Under no circumstance shall STOXX or its licensors be liable for any economic loss whatsoever, including consequential loss, even if STOXX and its licensors are informed of such risk.

The license agreement between LYXOR INTERNATIONAL ASSET MANAGEMENT and STOXX was agreed in their sole interests, and not in the interest of share-holders or unit-holders of the Compartment or of third parties.

APPENDIX TO THE REPORT
intended for Swiss subscribers

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Fund
France.

Representative of the Swiss Fund

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Fund, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale Paris, Zurich Branch, Talacker 50, P.O. Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the collective investment: 31-Oct

Average assets of the fund for the period from 01/11/18 to 31/10/19: 5,734,816,076.46

UCITS management commission: 0.20 % including tax

Excerpt from the income statement

Expenses in euros	Annual report	Half-yearly report	Annual report
	31/10/2018	30/04/2019	31/10/2019
Fund management commission	6,562,682.49	5,963,672.18	11,457,269.86
Performance fee to be paid to the manager of collective investments of capital	0.00	0.00	0.00
Depository bank commission	0.00	0.00	0.00
Other expenses	0.00	0.00	0.00
Taxes	0.00	0.00	0.00
Total operating expenses	6,562,682.49	5,963,672.18	11,457,269.86

Calculation of the TER for 12 months, from 01/11/18 to 31/10/19:

TER, including performance fee

$$(11,457,269.86 / 5,734,816,076.46) * 10$$

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Terms of determination and allocation of amounts available for distribution:

Class of Acc equity: Capitalisation of all the amounts available for distribution.

Class of Dist equity: The Board of directors reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The management objective of this Compartment is to replicate the upwards or downwards evolution of the FTSE MTS Eurozone Government Bond IG (Mid Price) Index (Ex-CNO Etrix) ("Benchmark Indicator") listed in euros (EUR) while insofar as possible minimizing the tracking error between the Compartment's performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.5%.

Benchmark indicator:

The Benchmark Indicator is a "Total Return" type index (i.e. all coupons detached by the components of the Benchmark Indicator are reinvested in the Benchmark Indicator).

The Benchmark Indicator is composed of bonds issued by the governments of the eurozone countries, weighted by country and representing a full spectrum of maturities.

To be eligible for inclusion in the Benchmark Indicator, bonds must meet the following criteria:

- (i) They must pay a fixed rate of interest on a principal amount that will be fully repaid upon maturity, be denominated in euros, be non-convertible and incorporate no options;
- (ii) They must have been issued by a Eurozone member state selected by FTSE MTS from the list of countries having been attributed an Investment Grade credit rating by at least two of the three credit rating agencies, Standard & Poor's, Moody's and Fitch;
- (iii) They must be traded on the MTS platform;
- (iv) The minimum bond issuance size is two billion euros.

The performance tracked is that of the Benchmark Index's closing price at 5:15 pm CET.

Benchmark indicator publication

The closing price of the Benchmark Indicator is available on the Internet site: www.ftserussell.com/.

In accordance with Article 52 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Director shall FTSE TMX Global Debt Capital Markets Inc. of the benchmark index FTSE MTS Eurozone Government Bond IG (Mid Price) Index (Ex-CNO Etrix) has until 01.01.2020 to apply for an approval or a registration, if applicable.

As of the date of the last update of this prospectus, the administrator of the Benchmark Indicator has not yet been registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

Benchmark indicator revision and composition

The Benchmark Indicator's composition is revalued and rebalanced monthly.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components will be available on the Internet site: www.ftserussell.com/.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The Compartment's securities will be mainly global equities, in all economic sectors and listed in all markets, including small-cap markets.

The Compartment will invest permanently at least of 75% of its assets in equities of companies that have their head office in a Member State of the European Union or in another State that is a party to the treaty on the European Economic Area and that has signed with France a tax agreement containing an administrative assistance clause for the purposes of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment may be exposed, for up to 20% of its assets, to debts issued by an OECD member State. This 20% limit can be increased to 35% for a single bond when this proves to be justified by exceptional market conditions, notably when certain securities are excessively dominant and/or in case of high volatility of a debt issue, or in case of a political and/or economic event that is having or could have an incidence on the assessment of an issuing State's debt and/or that could affect an issuing State's credit rating, or any other event likely to affect the liquidity of a financial security included within the Benchmark Indicator.

Notwithstanding the hypotheses indicated in the above paragraph, securities guaranteed or issued by a same issuer can represent up to 35% of the assets, and 100% of the assets if the Compartment holds at least 6 debt issues, none of which exceeds 30% of the assets. The securities are financial instruments issued or guaranteed by an OECD member State, the local or regional authorities of a European Union Member State, or a party to the EEA agreement.

Interest rate sensitivity range within which the UCITS is managed:	Between 5 and 10
Currencies in which securities held by the Compartment is exposed:	Euro: between 0 and 100% of net assets Other: between 0 and 10% of net assets
Level of foreign exchange risk borne by the Compartment:	Up to 0% of net assets
Geographical area of issuers of securities to which the Compartment is exposed:	Geographical area: Eurozone: 0% to 100% of net assets Emerging countries: 0% to 10% of net assets

In the present case, the financial management delegatee intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation of the international equities (from all economic sectors, listed on all markets), including the small capitalisation markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

- o subordination to the main market indices,
- o liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
- o rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),

- Of diversification, in particular:

- o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- o Geographical area,
- o Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives guarantee in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt to the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and

such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets. In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

The financial guarantees received on another form than cash will not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the Compartment may recall at any time the global amount of liquidities taking into account the accrued interests;
- (iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company shall implement a policy for selecting financial intermediaries and counterparties particularly when it enters into total return swaps on the Compartment's behalf.

Financial establishments of an OECD country which have been found to be satisfactory are selected. Such analysis is done on the basis of the Management Company risk department's specific criteria, such as financial stability, rating, exposure, credit spread, type of business, track-record, etc.

The list of authorised counterparties shall be reviewed periodically or in the event of a market shock or decline in the selection criteria. This involves various departments (investment management, risks, operations, and support staff) of the Management Company. The counterparties selected are monitored regularly in accordance with the Management Company's Execution Policy. An escalation procedure to Senior Management of the Management Company and/or the Risk Department of the Société Générale group is provided in the event of an incident.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the initial investment may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Interest rate risk

The price of a bond is affected by changes in interest rates. The price of most bonds increases when interest rates decline and decreases when interest rates rise. Bonds with relatively long maturities (which is the case of those in the Benchmark Indicator) are more sensitive to changes in interest rates and are therefore more volatile investments than bonds with shorter maturities.

- Credit risk

In case of the deterioration of the rating affecting one or more issuers of the bonds comprising the Benchmark Indicator, the Compartment could be affected. This deterioration could imply a heightened risk of default on the part of the issuer of the bond in question, and could result in a depreciation of this bond's value.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT.

In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (“FFI”)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of units.

- Liquidity risk on a place of listing

The ETF's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Currency risk linked to the Compartment listing

The Compartment may be listed on certain markets of multilateral trading facilities in a currency other than that of the Benchmark Indicator. Investors buying the Compartment in a currency other than that of the Benchmark Indicator are exposed to currency risk. Therefore, the value of the investment made in a currency other than that of the Benchmark Indicator may be reduced in spite of an increase of the value of the benchmark Indicator, due to exchange rate fluctuations.

- Risk that the Compartment's management objective may only be partially reached:

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses Future Financial Instrument (“FFI”) negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this index or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Risk linked to a transaction involving securities comprising the Benchmark Indicator

Should the issuer of a security underlying the index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes in this Compartment wishes to gain exposure to the performance of the investment grade bond segment of the Eurozone both upwards and downwards.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for the next five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

Information: This fiscal year has an exceptional term of 10 months and 14 days.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 7 August 2018.*
- *Compartment creation date: 17 December 2018.*

Activity report

The investment objective of the sub-fund is to track the performance of the FTSE MTS Eurozone Government Bond IG (Ticker:FMMPIEG5).

Performances over the period:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor PEA Obligations d'État Euro UCITS ETF – Acc	FR0013346681	EUR	8.58% ⁽¹⁾	8.96%		8.58%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

Index Linked Swap's counterparty is: Société Générale.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533-22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

Breakdown of companies according to their ESG rating

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated	Leaders (AAA,AA)	Average (A, BBB, BB)	Laggards (B, CCC)
Financials		25.8%	33.6%	40.5%					26%	74%	0%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

0	0	222	Scope 1 reported (vs estimated)	0%
			Scope2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated In Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	0.0%
Some efforts	0.0%	0.0%	0.0%
Limited efforts/information	0.0%	0.0%	0.0%
No effort/No evidence	0.0%	0.0%	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel
Natural Gas	Nuclear
Renewables	Thermal Coal

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	0%
20-49.9%	0%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	0.0%
Energy Efficiency	0.0%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

LYXOR PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF
(compartment of the Multi Units France Sicav)

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

<https://www.lyxor.com/politiques>

Lyxor's best selection and execution policy

1. Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Information: This fiscal year has an exceptional term of 10 months and 14 days.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this assessment.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments denominated in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters the day of the closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives. They are invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Financial management fees and administrative fees external to the portfolio management company ⁽¹⁾	Net assets	Maximum 0.40% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment's accounting is carried out in Euros.

appendix

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Class of Acc equity: Capitalisation of all the amounts available for distribution.

Class of Dist equity: The Board of directors reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR MSCI GREECE UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR MSCI GREECE UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Equities of eurozone countries.

At least 60% of the Compartment is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

The Management Company reserves the right to distribute all or part of the distributable amounts once or several times a year and/or to capitalise them.

Management objective:

The Compartment's investment objective is to replicate the performance, whether positive or negative, of the MSCI Greece IMI + Coca-Cola 20-35 Net Total Return Index denominated in EUR (the "Benchmark Indicator"), while minimising the tracking error between the Compartment's performance and that of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.3%.

Benchmark indicator:

Benchmark Indicator description

The Benchmark Indicator is a "net dividends reinvested" index, which means that the Benchmark Indicator's performance includes the dividends paid by its underlying equities.

The Benchmark Indicator is an equity index weighted by market capitalization and adjusted for free-float. It is calculated and published by the international index provider MSCI Inc.

It is composed of the equities of companies that are domiciled and/or listed in Greece and which MSCI Limited classifies as small-cap, mid-cap or large-cap on the basis of its criteria. The Benchmark Indicator is representative of the stock-market performance of companies that are domiciled and/or listed in Greece. It accounts for approximately 99% of the free-float adjusted market capitalisation of the universe of companies that are domiciled and/or listed in Greece.

The MSCI methodology and its calculation method entail the Benchmark indicator being made up of a variable number of companies.

A full description and the complete methodology used to construct the Benchmark Indicator and information on the composition and respective weightings of the Benchmark Indicator components are available on the Internet site: www.msci.com.

The performance tracked is that of the Benchmark Indicator's closing price.

Benchmark Indicator revision and composition

The composition of the Benchmark Indicator is reviewed quarterly.

The exact composition and the revision rules of the Benchmark Indicator are available on the Internet site: www.msci.com.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The value of the Benchmark Indicator and the list of its constituents are available on MSCI's Internet site at www.msci.com.

The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is available via Reuters and Bloomberg.

The Benchmark Indicator's closing price is available on the Internet site: www.msci.com.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the reference indices used, describing the measures to be implemented in the event of changes to an index or discontinuance of the provision of that index.

In accordance with Article 52 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator MSCI Limited, is registered in ESMA's register of benchmark index administrators.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment will notably be securities that make up the Benchmark Indicator, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

The Compartment will invest permanently at least of 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the treaty on the European Economic Area and that has signed with France a tax agreement containing an administrative assistance clause for the purposes of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including the small capitalisation markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
 - o Subordination to the main market indices or to the Benchmark Indicator,
 - o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
 - o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:
 - o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),

- Geographical area,
- Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

The investment in undertakings for collective investment in transferable securities (“UCITS”) that comply with Directive is limited to 10% of the net assets of the Compartment. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of UCITS or investment funds managed by the management company, or a company with which it is linked.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment’s assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

When Société Générale acts as a counterparty to FFI, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company’s conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment’s use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations.

The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt to the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and

such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

The financial guarantees received on another form than cash will not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the Compartment may recall at any time the global amount of liquidities taking into account the accrued interests;

(iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (TRS or EPMT), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company shall implement a policy for selecting financial intermediaries and counterparties particularly when it enters into total return swaps on the Compartment's behalf.

Financial establishments of an OECD country which have been found to be satisfactory are selected. Such analysis is done on the basis of the Management Company risk department's specific criteria, such as financial stability, rating, exposure, credit spread, type of business, track-record, etc.

The list of authorised counterparties shall be reviewed periodically or in the event of a market shock or decline in the selection criteria. This involves various departments (investment management, risks, operations, and support staff) of the Management Company. The counterparties selected are monitored regularly in accordance with the Management Company's Execution Policy. An escalation procedure to Senior Management of the Management Company and/or the Risk Department of the Société Générale group is provided in the event of an incident.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may be subject to operational risk due to defaults or errors by the various parties involved in the collateral management of securities financing transactions and/or total return swaps contract (TRS). This risk arises only in connection with the management of securities financing transactions and total return swaps as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to the exposure to Emerging markets

The Compartment's exposure to emerging markets results in a greater risk of loss than would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, of government restrictions on foreign investments, and interruption or restriction of the convertibility or transferability of any of the currencies comprising the reference index.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator.

These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Risk related to low diversification

The Benchmark Indicator to which the investors are exposed only covers the market for bonds issued by the US government and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of a Benchmark Indicator that is exposed to several regions, sectors or strategies. The exposure to a Benchmark Indicator with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

- Risk of investing in mid-cap companies

Le Compartment is exposed to medium-capitalisation companies and more specifically to the equity securities of medium and intermediate sized enterprises (ISC), which may increase market and liquidity risks. The prices of these securities therefore increase and decrease more sharply and rapidly than those of large-cap stocks. The Compartment's net asset value could behave similarly and therefore fall more sharply and strongly than that of a similar investment in large-cap stocks.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor subscribing to this Compartment wishes to obtain an exposure to the performance of large and mid-cap companies of developed countries, excluding the Euro zone countries.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

Information: This fiscal year has an exceptional term of 14 months.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Approval date by the AMF (Financial Markets Authority): 12 December 2006.*
- *Compartment approval date by the AMF (Financial Markets Authority): 29 March 2019.*
- *Funds creation date: 5 January 2007.*
- *Compartment creation date: 9 May 2019.*

Activity report

The investment objective of the sub-fund is to track the performance of MSCI Greece IMI + Coca-Cola 20-35 Net Total Return (Ticker:NE714828).

Performances over the period:

Share name	ISIN	Share currency	Performance from 31/08/18 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI Greece UCITS ETF – Dist	FR0010405431	EUR	15.92% ⁽¹⁾	17.54%	-90.43%	

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative expenses;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index”.

The Tracking Error is 0.0651% for the sub-fund. The Tracking Error target for the year was 0.3%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams. With regards to Tracking error computation, performance until 10/05/2019 corresponds to performance of fonds Lyxor MSCI Greece UCITS ETF. This fund was absorbed by the fund on 10/05/2019.

Until 20 January 2019 the Fund's Benchmark Indicator was FTSE/Athens Stock Exchange Large Cap Net Total Return Index, from 21 January 2019 the Benchmark Indicator is MSCI Greece IMI + Coca-Cola 20-35 Net Total Return.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

Index Linked Swap's counterparty is: Société Générale.

The sub-fund is the result of a merger/absorption. The performances mentioned in the report are calculated from the inception date of the absorbed fund.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533-22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

LYXOR MSCI GREECE UCITS ETF
(compartment of the Multi Units France Sicav)

Portfolio ESG Rating as of October 2019

Materials			2.8%								

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Green Flag	79%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2019

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
824	809	414	Scope 1 reported (vs estimated)	27%
			Scope2 reported (vs estimated)	22%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	1%
Thermal Coal	1%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.3%	0.0%	0.0%
Some efforts	58.6%	87.9%	48.2%
Limited efforts/information	11.0%	0.0%	1.0%
No effort/No evidence	27.2%	10.2%	50.8%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

Transparency of securities financing operations and reuse of financial instruments SFTR regulation
(Accounting currency of the CIU)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

Securities lending	
% of loaned assets	-

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.

	Securities lending ⁽¹⁾	Securities borrowing ⁽²⁾	Repo operations ⁽³⁾	Reverse repo operations ⁽⁴⁾	TRS ⁽⁵⁾
Absolute value	-	-	-	-	195,972,552.72
% of assets under management	-	-	-	-	100.00

⁽¹⁾ The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

⁽²⁾ The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

⁽³⁾ The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

⁽⁴⁾ The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

⁽⁵⁾ The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

2. Concentration data

1. Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Information: This fiscal year has an exceptional term of 14 months.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

appendix

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

appendix

Fees invoiced to the Compartment	Basis	Schedule, rate
Financial management fees and administrative fees external to the portfolio management company (Auditor, Depository, distribution, lawyers) including tax ⁽¹⁾	Net assets	maximum 0.45% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment's accounting is carried out in EUR.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

The Management Company reserves the right to distribute all or part of the distributable amounts once or several times a year and/or to capitalise them.

appendix

The Compartment is in no way sponsored, endorsed, sold or promoted by MSCI Inc. ("MSCI"), or by any MSCI subsidiary, or by any of the entities involved in the establishment of the MSCI indices. The MSCI indices are the exclusive property of MSCI and the MSCI indices are trademarks of MSCI or of its subsidiaries and have been the subject of a licence granted, for certain requirements, to Lyxor International Asset Management. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment and calculation of the MSCI indices makes any declaration or issues any express or implicit guarantee relative to bearers of the Compartment's equities or more generally to the public, with regard to the timeliness of a transaction involving mutual fund units or equities Compartment in particular, or regarding the ability of any MSCI index to replicate the performance of the overall equity market. MSCI or its subsidiaries are the owners of certain names, registered trademarks and of the MSCI indices that are determined, composed and calculated by MSCI without discussion with Lyxor International Asset Management or the Compartment. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment of the MSCI indices is required to take into consideration the needs of Lyxor International Asset Management or of the bearers of the Compartment's equities when determining, composing or calculating the MSCI indices. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment of the MSCI indices makes any decision regarding the launch date, the price, the quantity of the Compartment's equities, or even the determination and calculation of the formula used to establish the Compartment's net asset value. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment of the MSCI indices assumes any liability or obligation with regard to the administration, management or marketing of the Compartment.

THOUGH MSCI OBTAINS INFORMATION FOR INTEGRATION OR USE IN THE CALCULATION OF THE INDICES FROM SOURCES THAT MSCI CONSIDERS TO BE RELIABLE, NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OR CALCULATION OF THE MSCI INDICES GUARANTEES THE ACCURACY AND/OR EXHAUSTIVE NATURE OF THE INDICES OR OF ANY INCLUDED DATA. NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OF A CALCULATION FOR THE MSCI INDICES GIVES ANY EXPRESS OR IMPLICIT GUARANTEE REGARDING THE RESULTS THAT MAY BE OBTAINED BY THE HOLDER OF A MSCI LICENCE, THE CUSTOMERS OF THE SAID LICENSEE AS WELL AS THE COUNTERPARTS, BEARERS OF THE FUND EQUITIES OR ANY OTHER PERSON OR ENTITY, BASED ON THE USAGE OF THE INDICES OR OF ANY DATA INCLUDED WITH REGARD TO THE RIGHTS GRANTED BY LICENCE OR FOR ANY OTHER USAGE. NEITHER MSCI NOR ANY OTHER PARTY GIVES EXPRESS OR IMPLICIT GUARANTEES AND MSCI REJECTS ALL GUARANTEES REGARDING THE COMMERCIAL VALUE OR ADEQUACY FOR SPECIFIC USAGE OF THE INDICES OR INCLUDED DATA. NOTWITHSTANDING THE ABOVE, UNDER NO CIRCUMSTANCES MAY MSCI OR ANY OTHER PARTY BE HELD LIABLE WITH REGARD TO ANY DAMAGES, WHETHER DIRECT, INDIRECT OR OTHER (INCLUDING THE LOSS OF EARNINGS), EVEN IN CASE OF KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES.

3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

This breakdown is given for the main listing or assessment currencies, with the exception of the currency in which the accounting is maintained.

By main currency	USD	SEK	NOK	Other currencies
Assets				
Deposits	-	-	-	-
Equities and similar securities	37,944,461.16	26,159,048.21	2,601,021.70	2,483,958.40
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
Liabilities				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	-	-	-	-
Off-balance sheet				
Hedging	-	-	-	-
Other operations	-	-	-	-

3.5 Receivables and Debts: breakdown by type

Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future currency exchange operations by type of operation (purchase/sale).

Receivables	5,649,978.71
Future currency exchange operations:	
Future purchases of currency	-
Total negotiated amount of future currency sales	-
Other receivables:	
Deferred settlement sales	3,732,403.70
Account receivable	1,917,575.01
-	-
-	-
-	-
Other operations	-
Debts	5,723,152.29
Future currency exchange operations	
Future sales of currency	-
Total negotiated amount of future currency purchases	-
Other debts:	
Deferred settlement purchases	5,649,978.72
Accrued expenses	73,173.57
-	-
-	-
-	-
Other operations	-

(compartment of the Multi Units France Sicav)

3.6 Shareholders' equity

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	44,883,563	41,590,912.56	64,868,800	53,975,745.40
Subscription / redemption commission		-		-
Remittances		-		-
Commissions acquired by the Compartment		-		-

3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	0.45
Performance commissions (variable fees): amount of costs for the fiscal year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

3.8 Commitments given and received

3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees	None
3.8.2 Description of the other commitments received and/or given	None

3.9 Other information

3.9.1 Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2 Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- CIU securities	-
- Swaps	163,731.65

currency					
EUR	31.10.2019	31.10.2018	31.08.2017	31.08.2016	31.08.2015
Net assets	195,975,552.72	190,189,939.67	205,655,344.67	138,910,774.94	181,948,654.25
Number of outstanding equities	194,848,305	214,833,542	203,386,431	189,581,776	206,775,684
Net asset value	1.0057	0.8852	1.0111	0.7327	0.8799
Distribution per unit on capital gains and losses (including advances)	-	-	-	-	-
Distribution per unit (including advances)	0.02	0.02	0.02	-	0.01
Unit tax credit transferred to unit holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	0.00	-0.11	0.24	-0.24	-0.83

⁽¹⁾In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

⁽²⁾The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of units in circulation. This calculation method is applied from 1 January 2013.
Compartment creation date: 9 May 2019.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR MSCI INDIA UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR MSCI INDIA UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

International equities.

The Compartment has at least 60% permanent exposure to a foreign equity market or to equity markets of several countries, including possibly the French market.

The Compartment is index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Classes of Acc (EUR) and Acc (USD) equities: Capitalisation of all the amounts available for distribution.

Management objective:

The management objective of the Compartment is to replicate, both upwards and downwards, the performance of the MSCI India Net Total Return Index (the "Benchmark Index"), listed in US Dollars (USD), regardless of its evolution, while minimising as far as possible the tracking error between the performance of the Sub-Fund and that of the Benchmark Index.

The anticipated level of the ex-post tracking error under normal market conditions is 0.1%.

Benchmark indicator:

The Benchmark Indicator is a net dividends reinvested index, which means that the Benchmark Indicator's performance includes the net dividends paid by its underlying equities.

The Benchmark Indicator is an equity index, weighted by free float-adjusted market capitalization, calculated and published by the international index provider MSCI Inc.

The Benchmark Indicator is made up exclusively of Indian equities (India) in the large and mid-cap segments and retains the fundamental characteristics of the MSCI indices, i.e.: Adjustment of the stock market capitalization of the securities in the Benchmark Indicator on the basis of the float, and sector classification according to the GICS (Global Industry Classification Standard) classification.

The objective of the Benchmark Indicator is to represent 85% of the capitalization adjusted on the basis of the float, of each group of industries of the Indian market.

By targeting 85% of the representativeness of each industry group, the Benchmark Indicator measures 85% of the market capitalization of the Indian market, while also reflecting the market's economic diversity.

The MSCI methodology and its calculation method entail the Benchmark Indicator being made up of a variable number of companies.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and on the respective importance of components of the Benchmark Indicator will be available on the Internet site: www.msci.com.

The monitored performance is that of the closing prices of the Benchmark Indicator.

Benchmark indicator revision and composition:

The Benchmark Indicator is reviewed quarterly.

The exact composition and the rules for revising the composition of the Benchmark Indicator are published by MSCI and are available on the website: www.msci.com.

The above-mentioned frequency of rebalancing has no effect on costs in the context of the implementation of the Investment Strategy.

Benchmark indicator publication:

The value of the Benchmark Indicator and the list of its constituents are available on the MSCI website: www.msci.com.

The Benchmark Indicator is calculated daily at closing prices using the official closing prices of the stock exchanges on which the constituent securities are listed. The Benchmark Indicator is calculated in real time each trading day.

The Benchmark Indicator is available via Reuters and Bloomberg.

The Benchmark Indicator's closing price is available on the Internet site: <https://www.msci.com>.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the MSCI Limited administrator of the MSCI India Net Total Return Reference Indicator is entered in the register directors and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will reach its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to reach its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The financial securities in the Compartment's assets will notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The securities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be the neutralisation of the counterparty risk resulting from the future exchange contract described above.

Information relative to the (i) updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment, are available on the page dedicated to the Compartment on the site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In this case, the manager intends to primarily use the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
 - o Subordination to the main market indices or to the Benchmark Indicator,
 - o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
 - o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).
- of diversification, notably:
 - o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
 - o Geographical area,
 - o Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

The investment on undertakings for collective investment in transferable securities (“UCITS”) compliant with the Directive 2009/65/EC is limited to 10% of the assets. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of a future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to derivative instruments, including over-the-counter index-linked swaps exchanging the value of the Compartment's assets (or any other assets held by the Compartment where applicable) for the value of the securities making up the Benchmark Indicator (as described in paragraph 1 above of this section).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.

- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

When Société Générale acts as a counterparty to FFI, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

The counterparty to the aforementioned forward financial instruments will have no discretionary power over the composition of the Compartment's investment portfolio or over the underlying assets of the forward financial instruments within the limits and under the conditions laid down by the regulations.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

The Compartment may have recourse, on a temporary basis, to cash borrowings of up to 10% of its net assets, in particular in order to optimise cash management.

7. Temporary securities acquisition and sale operations

None. The Compartment will not enter into transactions involving the temporary purchase and/or sale of securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment’s use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the COMPARTMENT may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the COMPARTMENT as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees.

The financial guarantees received on another form than cash will not be sold, reinvested or pledged.

The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the UCITS may recall at any time the global amount of liquidities taking into account the accrued interests;
- (iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

If the counterparty to a corporate finance transaction (TRS or EPMT) defaults, the Compartment may be forced to resell the collateral received in connection with such transaction in adverse market conditions and thus incur a loss. In the event that the Compartment is permitted to reinvest the collateral received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired in connection with such reuse of the collateral.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into total return swaps on behalf of the Compartment.

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company's Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company's relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company's Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company's senior management and/or to the Société Générale group's Risk department.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets. Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Risk related to the exposure to Emerging markets

The Compartment's exposure to emerging markets results in a greater risk of loss than would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, of government restrictions on foreign investments, and interruption or restriction of the convertibility or transferability of any of the currencies comprising the reference index.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for FFI) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Risk related to the low diversification of the Benchmark Indicator

The Benchmark Index to which investors are exposed covers a given region, sector or strategy and therefore does not necessarily provide the same broad asset diversification as an index that would be exposed to several regions, sectors or strategies. Exposure to this poorly diversified Benchmark Indicator may result in greater volatility than that of more diversified markets. Nevertheless, the diversification rules derived from the UCITS standards apply at all times to the underlying assets of the Compartment.

- Liquidity risk on a place of listing

The ETF's share price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risks related to collateral management

Operational risk:

The Compartment may be subject to operational risk due to defaults or errors by the various parties involved in the collateral management of securities financing transactions and/or total return swaps (TRS). This risk arises only in connection with the management of collateral for corporate finance transactions and total return swaps as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by the supplier of the index,
- iii) The supplier of the index is incapable of providing the level or value of the Benchmark Indicator,

iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

A security transaction ("ST") impacting a component of the Benchmark Indicator may be subject to an unforeseen change that contradicts the prior official announcement. As the valuation of such ST by the Compartment is based on the initial announcement, the net asset value of the Compartment may be adversely affected in the event of an unforeseen change. In addition, the Fund's performance may diverge from that of the Benchmark Indicator if the Compartment's treatment of the ST differs from the treatment of the ST provided for by the Benchmark Indicator's methodology.

- Exchange risk linked to the Benchmark Indicator

The Compartment is exposed to the exchange risk insofar as the underlying securities comprising the Benchmark Indicator may be listed in a currency other than the currency of the Benchmark Indicator or be derived from securities listed in a currency other than the currency of the Benchmark Indicator. The fluctuations of exchange rates could therefore negatively affect the reference Benchmark Indicator followed by the Compartment.

- Exchange risk linked to the class of Acc-(EUR) equities

The abovementioned class of equities is exposed to an exchange risk to the extent that it is listed in a currency other than that of the Benchmark Indicator. The net asset value of the abovementioned class of equities can therefore decrease due to fluctuating exchange rates even though the value of the Benchmark Indicator has increased.

Subscribers concerned and typical investor profile:

The Compartment is "open to any subscriber".

An investor subscribing to this Compartment wishes to obtain an exposure to the Indian equities market.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

Information: This fiscal year has an exceptional term of 8 months.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Sicav Multi Units France: 4 March 2002.*
- *Date of approval by the AMF: 1 September 2006.*
- *Date of AMF approval of the Compartment: 29 March 2019.*
- *Date of creation of the Fund: 25 October 2006.*
- *Date of creation of the Compartment: 9 May 2019.*

Activity report

The investment objective of the sub-fund is to track the performance of MSCI India Net Total Return (Ticker:NDEUSIA).

Performances over the period:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI India UCITS ETF - Acc (EUR)	FR0010361683	EUR	9.63% ⁽¹⁾	10.87% ⁽³⁾	-2.02% ⁽²⁾	91.38%
Lyxor MSCI India UCITS ETF - Acc (USD)	FR0010375766	USD	7.41% ⁽¹⁾	8.62%		58.90%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

⁽²⁾ “Since the Share Class NAV is not calculated in the Index currency, the share class may be exposed to currency risk.

The calculation methodology for the Foreign Exchange rate during the period is share currency/ index currency.”

⁽³⁾ “When the Benchmark Index is denominated in a currency other than the share currency, the performance of the Benchmark Index is converted into the share's currency for comparison purpose. FOREX transactions are executed on a daily basis (WM Reuters 5 pm rate on the relevant date).”

The Tracking Error is 0.0308% for the sub-fund. The Tracking Error target for the year was 0.1%.

The realized tracking error level is below the anticipated tracking error level due to market conditions and replication techniques implemented by the portfolio managers. This difference is considered as immaterial.

With regards to Tracking error computation, performance until 10/05/2019 corresponds to performance of LYXOR MSCI INDIA UCITS ETF. This fund was absorbed by the fund on 10/05/2019.

Index Linked Swap's counterparty is: Société Générale.

The sub-fund is the result of a merger/absorption. The performances mentioned in the report are calculated from the inception date of the absorbed fund.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533-22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

-The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

-Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),

-A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 2%
Orange Flag 10%
Yellow Flag 40%
Green Flag 48%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2019

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	99%
459	792	545	Scope 1 reported (vs estimated)	85%
			Scope2 reported (vs estimated)	61%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	30%
Thermal Coal	4%
Natural Gaz	26%
Oil	26%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	9 169
Gas (MMBOE)	0.0017
Oil (MMBOE)	0.0017

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	4 860.4
Thermal Coal	16 747.8
Oil	710.1
Gas	449.4
Total	22 865.6

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	16 747.8
Oil Sands	0.0
Shale Oil or Shale Gas	132.4
Sum High Impact Reserves	16 880.2
Other	5 985.3

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	3.6%
Some efforts	91.9%	97.7%	36.1%
Limited efforts/information	2.1%	0.3%	1.8%
No effort/No evidence	6.0%	2.0%	58.5%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The raw data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	27%

Pollution Prevention	2.0%
Sustainable Water	2.9%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.2%
Energy Efficiency	1.0%
Green Building	0.0%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:
<https://www.lyxor.com/politiques>

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Information: This fiscal year has an exceptional term of 8 months.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this assessment.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters on the same day of the Compartment's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Financial management and administrative fees external to the portfolio management company (CAC, Custodian, distribution, lawyers) including tax ⁽¹⁾	Net assets	maximum 0.85% per year
Transactions commissions	Net assets	None
Outperformance commissions	Collection on each transaction	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

appendix

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- Occurred change:
 - The MF was absorbed by the SICAV on 9 May 2019.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

For classes of Acc (EUR) and Acc (USD) equities: Capitalisation of all the amounts available for distribution.

appendix

The Compartment is in no way sponsored, endorsed, sold or promoted by MSCI Inc. ("MSCI"), or by any MSCI subsidiary, or by any of the entities involved in the preparation of the MSCI indices. The MSCI indices are the exclusive property of MSCI and the MSCI indices are trademarks belonging to MSCI or its subsidiaries and have been the subject of a licence granted, for certain requirements, to Lyxor International Asset Management. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation or calculation of the MSCI indices makes any declaration or issues any express or implicit guarantee relative to holders of the Compartment's equities or more generally to the public, with regard to the timeliness of a transaction involving UCITS equities in general or the Compartment's equities in particular, or regarding the ability of any MSCI index to replicate the performance of the overall equity market. MSCI or its subsidiaries are the owners of certain names, registered trademarks and of the MSCI indices that are determined, composed and calculated by MSCI without discussion with Lyxor International Asset Management or the Compartment. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices is required to take into account the needs of Lyxor International Asset Management or of the holders of the Compartment's equities when determining, composing or calculating the MSCI indices. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices makes any decision regarding the launch date, the price, the quantity of the Compartment's equities, or even the determination and calculation of the formula used to establish the Compartment's net asset value. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices assumes any liability or obligation with regard to the Compartment's administration, management or marketing.

THOUGH MSCI OBTAINS INFORMATION FOR INTEGRATION OR USE IN THE CALCULATION OF THE INDICES FROM SOURCES THAT MSCI CONSIDERS TO BE RELIABLE, NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OR CALCULATION OF THE MSCI INDICES GUARANTEES THE EXACTNESS AND/OR EXHAUSTIVE NATURE OF THE INDICES OR OF ANY INCLUDED DATA. NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OF A CALCULATION FOR THE MSCI INDICES GIVES ANY EXPRESS OR IMPLICIT GUARANTEE AS TO THE RESULTS THAT MAY BE OBTAINED BY THE HOLDER OF A MSCI LICENCE, THE CUSTOMERS OF THE SAID LICENSEE AS WELL AS THE COUNTERPARTIES, HOLDERS OF FUND EQUITY OR ANY OTHER PERSON OR ENTITY, BASED ON THE USAGE OF THE INDICES OR OF ANY DATA INCLUDED WITH REGARD TO THE RIGHTS GRANTED BY LICENCE OR FOR ANY OTHER USAGE. NEITHER MSCI NOR ANY OTHER PARTY GIVES EXPRESS OR IMPLICIT GUARANTEES AND MSCI REJECTS ALL GUARANTEES REGARDING THE COMMERCIAL VALUE OR ADEQUACY FOR A SPECIFIC USAGE OF THE INDICES OR INCLUDED DATA. NOTWITHSTANDING THE ABOVE, UNDER NO CIRCUMSTANCES MAY THE LIABILITY OF MSCI OR OF ANY OTHER PARTY BE SOUGHT WITH REGARD TO ANY DAMAGES, WHETHER DIRECT, INDIRECT OR OTHER (INCLUDING THE LOSS OF EARNINGS), EVEN IN CASE OF KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES.

2. Evolution of the net assets

Currency	31.10.2019	28.02.2019
	EUR	EUR
Net assets at the start of the fiscal year	1,029,858,354.89	1,275,701,107.55
Subscriptions (including subscription commission acquired by the Compartment)	99,106,395.86	115,738,479.79
Redemptions (less the redemption commission acquired by the Compartment)	-285,622,961.43	-354,169,433.50
Capital gains generated on deposits and financial instruments	105,454,092.96	132,508,622.89
Capital losses generated on deposits and financial instruments	-48,442,268.84	-179,095,787.30
Capital gains generated on financial contracts	1,336,693,697.42	3,030,278,118.78

LYXOR MSCI INDIA UCITS ETF
(compartment of the Multi Units France Sicav)

3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

This breakdown is given for the main listing or assessment currencies, with the exception of the currency for the keeping of the accounts.

By main currency	USD	JPY	-	Other currencies
Assets				
Deposits	-	-	-	-
Equities and similar securities	387,442,101.99	5,531,543.68	-	-
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	0.68	-	-	-
Other assets	-	-	-	-
Liabilities				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	-	-	-	-
Off-balance sheet				
Hedging	-	-	-	-
Other operations	-	-	-	-

3.5 Receivables and Debts: breakdown by type

Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).

Receivables	32,971,448.56
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Deferred settlement sales	26,444,202.62
Account receivable	6,527,245.94
-	-
-	-
-	-
Other operations	-
Debts	33,624,298.08
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Deferred settlement purchases	32,971,448.57
Accrued expenses	652,849.51
-	-
-	-
-	-
Other operations	-

3.6 Shareholders' equity

Number of equities issued/redeemed during the fiscal year:	Number of equities	Subscriptions		Redemptions	
		Amount	Number of equities	Amount	
EQUITY Acc-(EUR) / FR0010361683	4,484,222	74,318,906.45	15,085,703	251,142,023.57	
EQUITY Acc-(USD) / FR0010375766	1,436,395	24,787,489.41	2,074,700	34,480,937.86	
Subscription / redemption commission by equity category:		Amount		Amount	
EQUITY Acc-(EUR) / FR0010361683		-		-	
EQUITY Acc-(USD) / FR0010375766		-		-	
Remittances by equity category:		Amount		Amount	
EQUITY Acc-(EUR) / FR0010361683		-		-	
EQUITY Acc-(USD) / FR0010375766		-		-	
Commissions acquired by the Compartment by equity category:		Amount		Amount	
EQUITY Acc-(EUR) / FR0010361683		-		-	
EQUITY Acc-(USD) / FR0010375766		-		-	

3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	%
Equity category:	
EQUITY Acc-(EUR) / FR0010361683	0.85
EQUITY Acc-(USD) / FR0010375766	0.85
Performance commissions (variable fees): amount of costs for the year	Amount
Equity category:	
EQUITY Acc-(EUR) / FR0010361683	-
EQUITY Acc-(USD) / FR0010375766	-
EQUITY Dist / FR0010296061	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

3.8 Commitments given and received

- 3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees **None**
 3.8.2 Description of the other commitments received and/or given **None**

3.9 Other information

3.9.1	Current value of the financial instruments that are the subject of temporary acquisition:	
	- Financial instruments sold under forward repurchase agreements	-
	- Other temporary operations	-
3.9.2	Current value of the financial instruments comprising security deposits:	
	Financial instruments received as guarantees and not included in the balance sheet:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
	Financial estimates given as guarantees and maintained in their original item:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
3.9.3	Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
	- CIU securities	-
	- Swaps	2,776,975.11

**APPENDIX TO THE REPORT
intended for Swiss subscribers**

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment
France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Fund, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale Paris, Zurich Branch, Talacker 50, P.O. Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the collective investment: 31-Oct

UCITS management commission: 0.85 % tax included

Average assets of the fund for the period from 01/09/18 to 31/10/19: 995,129,301.94

Excerpt from the income statement

Expenses in euros	Half-yearly report	Annual report	Annual report
	31/08/2018	28/02/2019	31/10/2019
Fund management commission	5,225,136.49	9,739,114.57	5,674,817.69
Performance fee to be paid to the manager of collective investments of capital	0.00	0.00	0.00

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR RUSSELL 2000 UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR RUSSELL 2000 UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

International equities.

At least 60% of the Compartment is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Class of Acc equities: Capitalisation of all the amounts available for distribution.

Class of Dist equities: The Board of directors reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The Compartment's management objective is to gain exposure to the performance of the "Russell 2000[®] Net 30% Total Return" index (the "Benchmark Index"), listed in United States dollars (USD), both upwards and downwards, while minimising the tracking error between the performance of the Compartment and that of its Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.05%.

Benchmark indicator:

Description of the Benchmark Indicator

Description of the Benchmark Indicator

The Benchmark Indicator is a net dividend reinvested index, i.e. the performance of the Benchmark Indicator includes the net dividends paid by its underlying equities.

The Benchmark Index measures the performance of the small-cap segment of the US market. It is a sub-set of the Russell 3000[®] and represents approximately 10% of the sum of the market capitalizations of this index. It includes the 2,000 smallest stocks in the Russell 3000[®], selected with respect to their capitalization and their inclusion in this index.

The Benchmark Indicator is constructed to provide an indicator of the U.S. small cap market. The Benchmark Indicator is completely updated each year to reflect new small cap stocks and to ensure the consistency of the market represented by the Benchmark Indicator.

FTSE Russell provides a family of US equity indexes weighted by market capitalisation. All of the US indices are sub-sets of the Russell 3000E[™] Index, which represents approximately 99% of the US stock market.

Each year, Russell Investments observes the following methodology to select the stocks that are to be included in the Benchmark Indicator:

- Classification by market capitalisation as at 31 May
- The largest 3,000 securities comprise the Russell 3000[®] Index
- The largest 1,000 securities comprise the Russell 1000[®] Index
- The following 2,000 securities comprise the Russell 2000[®] Index

The following are excluded:

- Securities traded at less than one dollar.
- Securities traded on the OTC Bulletin Board or on the Pink Quote market
- Closed funds, SCS, royalty trusts, etc.
- Non-US equities and American Depositary Receipts (ADRs).

Dividends are reinvested at the ex-dividend date.

The performance tracked is that of the closing prices of the Benchmark Indicator.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and on the respective importance of components of the Benchmark Indicator are available on the Internet site: www.ftserussell.com

Benchmark indicator revision and composition

The Benchmark Indicator is revised annually.

The exact composition of the Benchmark Indicator and Russell rules for index composition revision are available on the Internet site: www.ftserussell.com. The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark indicator publication

The value of the Benchmark Indicator and the list of its constituents are available at www.ftserussell.com.

The Benchmark Indicator is calculated in real time each trading day. The Benchmark Indicator is available via Reuters and Bloomberg.

The closing price of the Benchmark Indicator is available on the website www.ftserussell.com.

In accordance with Article 52 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, FTSE Russel Director of the Russell 2000[®] Net Total Return Benchmark has until 01.01.2020 to apply for approval or registration, if applicable.

As of the date of the last update of this prospectus, the administrator of the Reference Index has not yet been registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the reference indices used, describing the measures to be implemented in the event of changes to an index or discontinuance of the provision of that index.

Investment strategy:

Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective through an indirect replication method which means that the Compartment will have recourse to the conclusion of one or several forward swap contracts traded over-the-counter that will allow the Compartment to achieve its management objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment will notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The securities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity.

This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In this case, the manager intends to primarily use the following assets:

Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including the small caps markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
 - o Subordination to the main market indices or to the Benchmark Indicator,
 - o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
 - o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:
 - o Issuer (application of ratios applicable to the eligible assets of a CIU, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
 - o Geographical area,
 - o Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

Investment in the assets of undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net asset. The manager will not invest in units or equities of AIF mentioned in article R214-13 of the [French] Monetary and Financial Code. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked.

Where the Compartment receives securities as collateral, under the conditions and within the limits of paragraph 8 below of this section, which are received in full ownership by the Compartment, they also constitute balance sheet assets received in full ownership by the Compartment.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to derivative instruments, including over-the-counter index-linked swaps exchanging the value of the Compartment's assets (or any other assets held by the Compartment where applicable) for the value of the securities making up the Benchmark Indicator (as described in paragraph 1 above of this section).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

Securities with integrated derivatives

None.

Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowing, in particular with a view to optimising its cash management.

Temporary securities acquisition and sale operations

None. The Compartment will not have recourse to temporary acquisition and/or sale operations involving securities.

Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and

such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Guarantees received in a currency other than the Euro may be subject to an additional margin.

Reinvestment of received guarantees:

The financial guarantees received on another form than cash will not be sold, reinvested or pledged.

The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the Compartment may recall at any time the global amount of liquidities taking into account the accrued interests;
- (iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

If the counterparty to a corporate finance transaction (TRS or EPMT) defaults, the Compartment may be forced to resell the collateral received in connection with such transaction in adverse market conditions and thus incur a loss. In the event that the Compartment is permitted to reinvest the collateral received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired in connection with such reuse of the collateral.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Liquidity risk on a place of listing

The Compartment's share price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

Counterparty risk

The Compartment is exposed to the risk of bankruptcy, default or other types of default by any counterparty with whom it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFIs negotiated over-the-counter with Société Générale or with any other counterparty. In accordance with UCITS regulations, the counterparty risk (whether this counterparty is Société Générale or another entity) may not exceed 10% of the total value of the Compartment's assets per counterparty.

Risks related to collateral management

Operational risk:

The Compartment may be subject to operational risk due to defaults or errors by the various parties involved in the collateral management of securities financing transactions and/or total return swaps (TRS). This risk arises only in connection with the management of collateral for corporate finance transactions and total return swaps as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors.

In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by the supplier of the index,
- iii) The supplier of the index is incapable of providing the level or value of the Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction (“ST”), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment’s counterparty in a future financial instrument), the Compartment’s net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST’s treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the performances of the segment of large-cap companies with growth potential in the American market by reproducing the evolution of the Benchmark Indicator.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one’s investments so as to avoid an exposure only to this Compartment’s risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 5 years.

“U.S. Persons” (as defined below - see “COMMERCIAL ORDER INFORMATION”) may not invest in the Compartment.

Information: This fiscal year has an exceptional term of 9 months.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment’s complete prospectus and the latest annual and periodic documents are sent within one week of the bearer’s written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Date of creation of the Sicav Multi Units France: 4 March 2002.*
- *Date of approval by the AMF: 14 October 2011.*
- *Date of AMF approval of the Compartment: 29 March 2019.*
- *Date of creation of the Fund: 27 October 2011.*
- *Date of creation of the Compartment: 5 September 2019.*

Activity report

The investment objective of the sub-fund is to track the performance of Russell 2000 Net 30% Total Return USD (Ticker:RU20N30U).

Performances over the period:

Share name	ISIN	Share currency	Performance from 31/01/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor Russell 2000 UCITS ETF - Acc	FR0011119254	USD	5.13% ⁽¹⁾	5.00%	126.43%	

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.0008% for the sub-fund. The Tracking Error target for the year was 0.05%.

The realized tracking error level is below the anticipated tracking error level due to market conditions and replication techniques implemented by the portfolio managers. This difference is considered as immaterial.

With regards to Tracking error computation, performance until 06/09/19 corresponds to performance of Lyxor Russell 2000 UCITS ETF. This fund was absorbed by the fund on 06/09/19.

Index Linked Swap's counterparty is: Société Générale.

The sub-fund is the result of a merger/absorption. The performances mentioned in the report are calculated from the inception date of the absorbed fund.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533-22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

-The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

-Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),

-A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 1%
Yellow Flag 3%
Green Flag 95%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2019

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	93%
114	150	148	Scope 1 reported (vs estimated)	25%
			Scope2 reported (vs estimated)	12%

Scope 1 & 2 estimations are based on MSCI methodology

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	2%
Thermal Coal	1%
Natural Gaz	1%
Oil	1%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on investment of : \$1,000,000	
Thermal Coal (Tons)	3 444
Gas (MMBOE)	0.0027
Oil (MMBOE)	0.0022

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	1 603.4
Thermal Coal	6 290.4
Oil	912.5
Gas	40.9
Total	9 670.9

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	6 290.4
Oil Sands	0.0
Shale Oil or Shale Gas	1 539.9
Sum High Impact Reserves	7 830.3
Other	1 840.6

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.3%	0.2%	0.9%
Some efforts	11.0%	24.4%	6.1%
Limited efforts/information	4.8%	8.3%	0.6%
No effort/No evidence	81.7%	65.9%	91.1%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

2.7%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	11.1%
Liquid Fuel	0.2%
Natural Gas	24.9%
Nuclear	11.3%
Renewables	17.3%
Thermal Coal	35.2%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	15%
20-49.9%	3%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	5.9%
Energy Efficiency	10.3%
Green Building	2.5%
Pollution Prevention	4.0%
Sustainable Water	4.2%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	1.1%
Energy Efficiency	0.9%
Green Building	0.6%
Pollution Prevention	0.5%
Sustainable Water	0.5%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

Transparency of securities financing operations and reuse of financial instruments SFTR regulation
(Accounting currency of the CIU)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

Securities lending	
% of loaned assets	-

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.

	Securities lending ⁽¹⁾	Securities borrowing ⁽²⁾	Repo operations ⁽³⁾	Reverse repo operations ⁽⁴⁾	TRS ⁽⁵⁾
Absolute value	-	-	-	-	8,994,948.53
% of assets under management	-	-	-	-	100.00

⁽¹⁾ The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

⁽²⁾ The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

⁽³⁾ The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

⁽⁴⁾ The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

⁽⁵⁾ The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

2. Concentration data

2.1. The ten biggest issuers of guarantees for all types of securities financing operations and total return swaps (breakdown of the volumes of guarantees and raw materials received, with the names of the issuers).

1	Name	-
	Amount	-

2.2. The ten main counterparties for each type of securities financing operation and total return swap separately (name of the counterparty and gross volume of operations in progress).

		Securities lending	Securities borrowing	Repo operations	Reverse repo operations	TRS

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Information: This fiscal year has an exceptional term of 9 months.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this assessment.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters on the same day of the Compartment's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document.

appendix

Fees invoiced to the CIU	Basis	Schedule rate
Financial management fees and administrative fees external to the management company ⁽¹⁾	Net assets	maximum 0.19% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transfer commissions	Net assets	None
Outperformance commissions	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually (*Not certified by the auditor*)

- Occurred change:
 - The MF was absorbed by the SICAV on 6 Septembre 2019.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Class of Acc equities: Capitalisation of all the amounts available for distribution.

appendix

The Compartment is in no way sponsored, endorsed, sold or promoted by Franck Russell Company ("Russell"), Russell makes no declaration and does not issue any express or tacit guarantee relative to bearers of the equities of the Compartment or more generally to the public, with regard to the advisability of a transaction involving mutual fund equities in general or equities of the Compartment in particular, or regarding the ability of the Russell 2000[®] Net 30% Total Return index to replicate the performance of the market or of one of its segments. The publication of the Russell 2000[®] Net 30% Total Return index under no circumstances implies or suggests the advisability of investing in one or all of the securities making up the Russell 2000[®] Net 30% Total Return index. The only relation with Lyxor International Asset Management is the agreement of Franck Russell Company ("Russell") regarding the brands and names registered for Russell and relative to the Russell 2000[®] Net 30% Total Return index that is created and calculated by Russell without any consultation with Lyxor International Asset Management or the Fund. Russell cannot be held liable and has not studied the Fund nor any literature or other publication, and it makes no declaration and does not issue any express or tacit guarantee with regard to its accuracy or exhaustiveness. At any time and without warning, Russell reserves the right to revise, modify, close or otherwise change the Russell 2000[®] Net 30% Total Return index. Russell assumes no liability or obligation regarding the administration, management or marketing of the Compartment.

RUSSELL DOES NOT GUARANTEE THE ACCURACY AND/OR EXHAUSTIVENESS OF THE INDICES OR OF ANY INCLUDED DATA. NEITHER RUSSELL NOR ANY OTHER PARTY INVOLVED IN THE CREATION OF A CALCULATION FOR THE RUSSELL INDICES GIVES ANY EXPRESS OR TACIT GUARANTEE AS TO THE RESULTS THAT MAY BE OBTAINED BY THE HOLDER OF A RUSSELL LICENCE. RUSSELL REJECTS ALL GUARANTEES REGARDING THE COMMERCIAL VALUE OR ADEQUACY FOR A SPECIFIC USE OF THE INDICES OR INCLUDED DATA. NOTWITHSTANDING THE ABOVE, UNDER NO CIRCUMSTANCES MAY THE LIABILITY OF RUSSELL OR OF ANY OTHER PARTY BE SOUGHT WITH REGARD TO ANY DAMAGES, WHETHER DIRECT, INDIRECT OR OTHER (INCLUDING THE LOSS OF EARNINGS), EVEN IN CASE OF KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES.

LYXOR NEW ENERGY UCITS ETF

**rapport
annuel**

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR NEW ENERGY UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR NEW ENERGY UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

International equities.

At least 60% of the Lyxor New Energy UCITS ETF Compartment (the “Compartment”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

The Management Company reserves the right to distribute all or part of the amounts available for distribution, one or more times each year.

Management objective:

The Compartment’s management objective is to replicate, downwards and upwards, the evolution of the World Alternative Energy Index CW Net Total Return index (the “Benchmark Indicator”), listed in euros (EUR), while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The Benchmark Indicator is representative of the performance of the global renewable energy sector. The maximum anticipated level of the ex-post tracking error under normal market conditions is 0.30%.

Benchmark Indicator:

The Benchmark Indicator's performance includes the net dividends paid by its underlying equities.

The Benchmark Indicator is an equity index calculated by Solactive AG, maintained by Robeco SAM (Sustainable Asset Management) and published by Solactive AG.

The Benchmark Indicator is a reference index dedicated to the renewable energy sector.

The Benchmark Indicator is made up of securities listed on the markets in Europe, America and Asia, with a significant portion of its revenues coming from one of the following three sectors of activity:

- Renewable energy (sun, wind, biomass);
- Energy efficiency (better use of energy sources, notably through electric meters and superconductors);
- Decentralisation of power supplies (electricity generation near the consumer, notably via micro-turbines and fuel cells).

The weighting of the Benchmark Indicator is calculated on the basis of the floating capitalizations of each of the adjusted components, taking into account criteria of optimal liquidity and maximum exposure as indicated in the methodology of the Benchmark Indicator.

The monitored performance is that of the Benchmark Indicator closing prices.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator’s components are available on the Internet site: <https://www.solactive.com>

Benchmark indicator revision and composition

The Benchmark Indicator is analysed and rebalanced on a semi-annual basis (January and July of each year).

The exact composition of the Benchmark Indicator and the rules of revision of its composition are available on the Internet site: <https://www.solactive.com>.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment strategy.

Benchmark indicator publication

The Benchmark Indicator is calculated daily using the official closing prices of the exchanges where the constituent stocks are listed.

The Benchmark Indicator's closing price is available on the Internet site: <http://www.solactive.com>.

In accordance with Article 52 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator of the Société Générale Index Benchmark Indicator has until 01.01.2020 to request approval or registration, if necessary.

As of the date of the last update of this prospectus, the administrator of the Reference Index has not yet been registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit will be checked on each rebalancing date of the Benchmark Indicator, in application of the Benchmark Indicator's calculation method that limits the exposure to each equity of a single issuing entity to 20%, and for which the calculation is carried out by the sponsor or the calculation agent of the Benchmark Indicator. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument or of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to primarily use the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

- o Subordination to the main market indices or to the Benchmark Indicator,
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
- o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

- of diversification, notably:

- o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- o Geographical area,
- o Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

The investment in undertakings for collective investment in transferable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Compartment’s assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (in compliance with the description contained in this section’s paragraph 1 above).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.

- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

The counterparty of the aforesaid future financial instruments will have no discretionary power regarding the composition of the Compartment’s investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowings

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment’s use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations.

The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;

(iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into total return swaps on behalf of the Compartment.

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company's Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company's relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company's Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company's senior management and/or to the Société Générale group's Risk department.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Risk related to low diversification of the Benchmark Indicator

The Benchmark Indicator to which the investors are exposed covers a given region, sector or strategy and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to such an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this index or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Exchange risk linked to the Benchmark Indicator

The Compartment is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Indicator could be listed in a currency other than that of the Benchmark Indicator, or be derivatives of securities listed in a currency other than that of the Benchmark Indicator. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor subscribing to this Compartment wishes to obtain an exposure to the equity market with companies that have, as their primary source of income, activities related to renewable energy business.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

Information: This fiscal year has an exceptional term of 4 months.

For more details, the complete prospectus can be obtained by requesting it from the management company.

The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Approval date by the AMF (Financial Markets Authority): 2 October 2007.*
- *Compartment approval date by the AMF (Financial Markets Authority): 3 July 2019.*
- *Fund creation date: 10 October 2007.*
- *Compartment creation date: 5 September 2019.*

Activity report

The investment objective of the sub-fund is to track the performance of World Alternative Energy Total Return Index CW EUR (Ticker: WAEXC).

Performances over the period:

Share name	ISIN	Share currency	Performance from 28/06/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor New Energy UCITS ETF - Dist	FR0010524777	EUR	5.19% ⁽¹⁾	5.44%	-24.88%	

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index”.

The Tracking Error is 0.1516% for the sub-fund. The Tracking Error target for the year was 0.3%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

With regards to Tracking error computation, performance until 06/09/19 corresponds to performance of Lyxor New Energy UCITS ETF . This fund was absorbed by the fund on 06/09/19.

Index Linked Swap's counterparty is: Société Générale.

The sub-fund is the result of a merger/absorption. The performances mentioned in the report are calculated from the inception date of the absorbed fund.

The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's Internet site or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,
- MSCI and Sustainalytics ESG research to integrate ESG issues,
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

For the swap based vehicles, the financial exposition via the derivative product is reported on a monthly basis.

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 38 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to 100% of the fund holdings.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

LYXOR NEW ENERGY UCITS ETF (compartment of the Multi Units France Sicav)

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

Portfolio ESG Rating as of October 2019

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Orange Flag 0%
Yellow Flag 36%
Green Flag 60%

LYXOR NEW ENERGY UCITS ETF
(compartment of the Multi Units France Sicav)

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2019

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
128	281	552	Scope 1 reported (vs estimated)	95%
			Scope2 reported (vs estimated)	80%
			Scope 1& 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Note: These measures are applicable to equity portfolios, but only the weighted average carbon intensity (tCO2e / \$M sales) is applicable to both equity and corporate fixed income/ multi-asset class portfolios.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

LYXOR NEW ENERGY UCITS ETF
(compartment of the Multi Units France Sicav)

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	38.9%	0.0%	1.1%
Some efforts	44.5%	85.1%	49.5%
Limited efforts/information	0.0%	8.4%	28.5%
No effort/No evidence	15.8%	5.8%	20.2%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

35.0%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	29.5%
Liquid Fuel	0.2%
Natural Gas	28.7%
Nuclear	13.0%
Renewables	25.3%
Thermal Coal	3.3%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	23%
20-49.9%	45%
50-100%	29%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	73.1%
Energy Efficiency	47.0%
Green Building	0.0%
Pollution Prevention	3.9%
Sustainable Water	6.2%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	25.4%
Energy Efficiency	13.8%
Green Building	0.0%
Pollution Prevention	0.1%
Sustainable Water	0.1%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

LYXOR NEW ENERGY UCITS ETF
(compartment of the Multi Units France Sicav)

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

<https://www.lyxor.com/politiques>

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended.

Information: This fiscal year has an exceptional term of 4 months.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value.

When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.
- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Compartment's net asset value date.

appendix

Posting method for the negotiation fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

Financial instruments received as collateral

These financial instruments are listed under the “Financial instruments” item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the “Other temporary operations” item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract’s nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document “KIID”.

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative fees external to the management company including tax ⁽¹⁾	Net assets	maximum 0.60% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transfer commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the shareholders individually (*Not certified by the auditor*)

- Occurred change:
 - The MF was absorbed by the SICAV on 5 Septembre 2019.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

In the event of a distribution, the Management Company reserves the right to distribute all or part of the amounts available for distribution, one or more times each year.

appendix

The World Alternative Energy Index CW Net Total Return index (Waex) is calculated by Dow Jones Indexes, a department of the company Dow Jones & Company, Inc. ("Dow Jones") and compiled by the SAM ("SAM") group. "Dow Jones" and "Dow Jones Indexes" are registered trademarks of Dow Jones & Company, Inc. The investment products based on the Waex are not proposed, guaranteed, sold or promoted by Dow Jones Indexes nor by the company SAM; Dow Jones Indexes and SAM express no opinion on the recommendable nature or not of the investment in the said products. Dow Jones, SAM and their respective affiliated companies, sources and distributing agents (collectively the "Index Parties") decline all liability relative to the Société Générale, Lyxor AM or to any customer or third party in case of direct or indirect loss or damage resulting from (i) inaccurate or incomplete data provided by the Waex, or from delays, interruptions, errors or omissions regarding the said data or all related data (the "Index Data"), or from (ii) any decision or measure taken by Société Générale, Lyxor AM, any customer or third party on the basis of the Index Data. The Index Parties give no explicit or implicit cert to the Société Générale, Lyxor AM, to any of its customers or any third party with regard to the Index Data, notably any certificate pertaining in any way to the appropriateness, order, accuracy, exhaustiveness, validity, marketing, quality or adequacy for a particular purpose, nor any certificate with regard to the results that may be obtained by Société Générale, Lyxor AM, any of its customers or third party relative to the use of the Index Data. The Index Parties decline all liability relative to the Société Générale, Lyxor AM, its customers or third parties in case of operating loss, loss of profits or indirect, special or similar damages of any kind whatsoever, whether consisting of contractual damage, owing to negligence or some other cause, even if they had been informed of the possibility of such damage. There can be no contractual relationship of any kind between Dow Jones or SAM Group and any of the customers of the Société Générale or Lyxor AM for investment products based on the Waex or linked to the latter. The Lyxor AM ETF, based on the Waex, is not proposed, guaranteed, sold or promoted by the Index Parties, who express no opinion as to the recommendable nature or not of the investment.

2. Evolution of the net assets

	31.10.2019	28.06.2019
Currency	EUR	EUR
Net assets at the start of the fiscal year	92,004,728.79	63,466,239.47
Subscriptions (including subscription commission acquired by the Compartment)	33,585,890.22	39,185,480.47
Redemptions (less the redemption commission acquired by the Compartment)	-4,008,317.80	-24,346,936.39
Capital gains generated on deposits and financial instruments	10,313,153.73	12,861,791.09

(compartment of the Multi Units France Sicav)

3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

This breakdown is given for the main listing or assessment currencies, with the exception of the currency for the keeping of the accounts.

By main currency	USD	JPY	AUD	Other currencies
Assets				
Deposits	-	-	-	-
Equities and similar securities	47,735,678.40	31,829,247.83	4,880,805.52	7,372,403.71
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
Liabilities				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	-	-	-	-
Off-balance sheet				
Hedging	-	-	-	-
Other operations	-	-	-	-

3.5 Receivables and Debts: breakdown by type

Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).

Receivables	1,242,799.62
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Deferred settlements sales	1,242,799.62
-	-
-	-
-	-
-	-
Other operations	-
Debts	1,303,813.65
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Deferred settlements purchases	1,018,635.22
Account payable	224,164.39
Accrued expenses	61,014.04
-	-
-	-
Other operations	-

3.6 Shareholders' equity

Equity category issued/redeemed during the fiscal year:	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
EQUITY Dist / FR0010524777	1,319,122	33,585,890.22	158,000	4,008,317.80
Subscription / redemption commission by equity category:		Amount		Amount
EQUITY Dist / FR0010524777		-		-
Retrocessions by equity category:		Amount		Amount
EQUITY Dist / FR0010524777		-		-
Commissions acquired by the Compartment by equity category:		Amount		Amount
EQUITY Dist / FR0010524777		-		-

3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	%
Equity category:	
EQUITY Dist / FR0010524777	0.60
Outperformance commissions (variable fees): amount of costs for the year	Amount
Equity category:	
EQUITY Dist / FR0010524777	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

3.8 Commitments given and received

- 3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees **None**
 3.8.2 Description of the other commitments received and/or given **None**

3.9 Other information

3.9.1	Current value of the financial instruments that are the subject of temporary acquisition:	
	- Financial instruments sold under forward repurchase agreements	-
	- Other temporary operations	-
3.9.2	Current value of the financial instruments comprising security deposits:	
	Financial instruments received as guarantees and not included in the balance sheet:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
	Financial estimates given as guarantees and maintained in their original item:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
3.9.3	Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
	- CIU securities	-
	- Swaps	102,466.69

3.10 Allocation of the profit and loss table *(in the Compartment accounting currency)*

Net asset value	25.9974	25.0302	20.7538	20.1056	16.7093
Unit distribution on net capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)*	-	0.32	0.13	0.19	0.28
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation*	-0.05	3.79	-0.26	2.80	-3.63

* The amounts of the unit distribution, the unit capitalisation and the tax credits are indicated in the accounting currency of the Compartment. The unit capitalisation corresponds to the profit or loss and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding equities on that date.

4. Inventory as of 31.10.2019

APPENDIX TO THE REPORT
intended for Swiss subscribers

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment

France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Compartment's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Compartment, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale, Paris, Zurich Branch, Talacker 50, PO Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the fund:	31-Oct.	
UCITS management commission:	0.60	% including tax
Average assets of the fund for the period from 01/10/19 to 31/10/19:	108,702,679.55	

Excerpt from the income statement

Expenses in euros	Half-yearly report	Annual report	Half-yearly report
	31/12/2018	28/06/2019	31/10/2019
Fund management commission	192,595.58	421,203.56	223,090.76
Performance fee to be paid to the manager of collective investments of capital	0.00	0.00	0.00
Depository bank commission	0.00	0.00	0.00
Other expenses	0.00	0.00	0.00
Taxes	0.00	0.00	0.00
Total operating expenses	192,595.58	421,203.56	223,090.76

Calculation of the TER, annualised for 4 months (from 29/06/19 to 31/10/19):

TER, including performance fee

$$(223,090.76 / 108,702,679.55) * 2.90 * 100$$

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Terms of determination and allocation of amounts available for distribution:

Capi equity class: Capitalisation of all the amounts available for distribution.

Management objective:

The management objective of the Compartment is identical to the management objective of the MASTER UCITS described in the section "INFORMATION RELATING TO THE MASTER UCITS".

The performance of the Compartment will differ from that of the MASTER UCITS due to the expenses incurred by the Compartment and/or due to the holding of cash by the Compartment.

INFORMATION RELATIVE TO THE MASTER UCITS:

INVESTMENT OBJECTIVE:

The management objective of the MASTER UCITS is to achieve capital appreciation by capturing the performance of different global asset classes by investing in listed index-linked UCITS ("UCITS ETF"), while limiting the average annual volatility of the MASTER UCITS to around 7%.

Benchmark Indicator:

No indicator is relevant with regard to the management techniques used.

BENCHMARK INDICATOR OF THE MASTER UCITS:

There is no relevant performance indicator for this Compartment.

ELIGIBILITY OF THE MASTER UCITS

In accordance with the objectives and investment policy described above, the MASTER UCITS may invest more than 50% of its net assets in units or shares of other UCITS.

Investment Strategy:

1. Strategy used

As the Compartment is a feeder fund of the MASTER UCITS, it must invest at least 85% of its assets in the shares of the MASTER UCITS, bearing in mind that its objective is to invest close to 100% of its net assets in units of the MASTER UCITS.

The Compartment may also hold cash on an ancillary basis.

A reminder of the investment strategy of the MASTER UCITS is mentioned in the paragraph below.

REMINDER OF THE INVESTMENT STRATEGY OF THE MASTER UCITS:

REFERENCE: IN THIS SECTION "REMINDER OF THE INVESTMENT STRATEGY OF THE MASTER UCITS".

"THE TERM "MANAGEMENT COMPANY" REFERS TO THE MANAGEMENT COMPANY OF THE MASTER FUND.

INVESTMENT POLICY of the MASTER UCITS

1. Investment process of the MASTER UCITS

The MASTER UCITS will invest mainly in a portfolio of trackers (or ETFs), i.e. "index" type UCITS that have been admitted to trading on a regulated market.

The investment strategy of the MASTER UCITS is based on a methodology and proprietary tools developed by the Management Company that systematically assess the long-term return and risk prospects of the main global asset classes (equities, bonds, raw materials and currencies) within the framework of geographical, sector or thematic approaches. The result is a diversified and flexible exposure that is built according to a two-step discretionary and dynamic management process:

(i) The construction of a "strategic portfolio", optimal for the MASTER UCITS which, without reflecting an opinion on short-term market trends, aims to generate performance over time. This research follows the following process:

1. Definition of a short-, medium- and long-term macroeconomic scenario on money market rates, corporate profits and inflation in the geographical areas included in the allocation;
2. Evaluation of the expected medium and long-term returns on the main asset classes taking into account this macroeconomic framework and their purchase prices. Such valuation is based on the traditional valuation models for these asset classes, developed and enhanced by the Management Company;
3. Calculation, on the basis of these expected returns, of the "strategic portfolio", which is optimal for the MASTER UCITS over the medium or long term investing on a fundamental basis. For this purpose, various analysis tools developed by the Management Company are used (financial scenario generators, dynamic portfolio optimisers).

(ii) This "strategic portfolio" is modified if necessary to take into account the Management Company's opinion on the short-term trends of the various markets and the risks they represent.

This formalised management process therefore leads to an effective allocation made up of supports representative of the asset classes selected for the composition of the "strategic portfolio", which is the result of positions taken with a medium- and long-term perspective (sensitive to the fundamental valuation of the various markets) and purely tactical positions (seeking to take advantage of the short-term dynamics of the various asset classes).

This process does not include a mechanism for overexposure through the use of forward financial instruments. The MASTER UCITS does not use leverage.

Investors' attention is drawn to the fact that the proportion of exposure to the various asset classes in the MASTER UCITS is likely to change very significantly according to their overvaluation/undervaluation cycles.

The MASTER UCITS shall invest up to 100% of its assets in units or shares of UCITS, particularly listed index-linked UCITS, and up to 30% of its total assets in units or shares of alternative investment funds governed by French or foreign law ("AIF") that comply with the four criteria stipulated in Article R 214-13 of the Monetary and Financial Code.

Exposure limits:

- Exposure to the equity asset class will be between 0% and 80% of the assets of the MASTER UCITS whose exposure limit will be raised to a maximum of 20% of the assets of the MASTER UCITS for small or mid-cap equities.
- Exposure to the bond asset class will be between 0% and 80% of the assets of the MASTER UCITS, whose exposure limit will be raised to a maximum of 30% of the assets of the MASTER UCITS for high-yield bonds (speculative securities);
- Exposure to the raw materials asset class will be between 0% and 30% of the assets of the MASTER UCITS;
- Exposure to the fixed income asset class will be between 0% and 30% of the assets of the MASTER UCITS;
- Exposure to the emerging markets asset class will be between 0% and 20% of the assets of the MASTER UCITS;
- The MASTER UCITS will not be exposed directly, but only indirectly (e.g. via an index or fund units) to the raw materials asset class;
- The MASTER UCITS may be exposed to exchange rate, equity, bond and two-tier interest rate risks, the accumulation of which may in some cases represent up to 100% of the assets of the MASTER UCITS:
 1. at the level of the assets of the MASTER UCITS, when the MASTER UCITS acquires directly-held securities or units of UCITS and/or AIFs listed in a currency other than the euro. This will be limited to approximately 30% maximum of the assets of the MASTER UCITS; and
 2. within the selected UCITS and/or AIFs, where these involve exposure to foreign exchange risk. This exposure will not be constrained at the level of the MASTER UCITS.

The Management Company may also use forward financial instruments traded on regulated and/or over-the-counter markets. The manager may intervene on these markets to hedge against exchange rate risks. Transactions involving derivatives and securities with embedded derivatives will be carried out within the limit of a maximum of 100% of the assets of the master UCITS in order to hedge against exchange rate risk.

The desirable risk-taking for the MASTER UCITS naturally depends on market configurations and the return outlook for the different asset classes. However, the Management Company estimates that the volatility of the MASTER UCITS will fluctuate around an average of 7%, a level similar to that of a balanced portfolio composed of 50% equities and 50% bonds.

Certain asset classes are characterised by specific risks: small-cap equities, emerging countries, high-yield bonds.

2. Balance sheet assets (excluding embedded derivatives)

- *Ownership of shares or units of other CIUs or investment funds*

The MASTER UCITS will invest up to 100% of its assets in UCITS, in particular index-linked UCITS (or ETFs). These UCITS may comply with Directive 2009/65/EC (UCITS Directive) up to 100% of the assets.

In addition, these UCITS may be traded on organised markets such as the "NextTrack" segment of Euronext Paris S.A. Market makers undertake to maintain a buy/sell spread on these UCITS at all times in order to ensure a minimum level of liquidity.

They may also include units or shares of AIFs that meet the four criteria set out in Article R 214-13 of the French Monetary and Financial Code up to a maximum of 30% of the total assets.

The Management Company may invest in Investment Funds managed by the Management Company, affiliated companies and/or entities of the Société Générale Group.

- *Equities*

In the context of future optimisation of the management of the MASTER UCITS, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve his management objective. The MASTER UCITS may invest in baskets of equities.

- *Debt securities*

In the context of future optimisation of the management of the MASTER UCITS, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve his management objective. The MASTER UCITS may invest in Exchange Traded Note ETNs.

The MASTER UCITS shall not enter into total return swap (TRS) contracts.

3. Off-balance sheet assets (derivative instruments)

In order to achieve its management objective, the MASTER UCITS may carry out transactions on the following derivative instruments: Nature of the intervention markets:

regulated

organized

over the counter

Risks on which the MASTER UCITS wishes to intervene:

equity

rates

foreign exchange

credit

Nature of interventions, all operations to be limited to the achievement of the management objective:

hedging

exposition

Nature of instruments used:

options

forward exchange

Strategy for using derivatives to achieve the management objective:

general hedging of the portfolio, certain risks, foreign exchange, interest rates, equities, bonds. - up to 100% of the assets reconstitution of a synthetic exposure to assets, risks - up to 100% of the assets.

The MASTER UCITS shall use forward exchange contracts to expose the fund to currency pairs as part of its investment strategy. For unit classes which are not listed in EUR, the MASTER UCITS shall also enter into forward exchange contracts between the currency of the unit class and the Euro in order to hedge all or part of the exchange rate risk specific to each unit class as effectively as possible during the lifetime of the MASTER UCITS. In addition, for hedging and exposure purposes, the MASTER UCITS may have recourse to listed options on equities and/or bonds.

4. Securities including derivatives used by the MASTER UCITS

None.

5. Deposits made by the MASTER UCITS

The MASTER UCITS may have recourse, within the limit of 20% of its net assets, to deposits with credit institutions in order to optimise its cash management.

6. Cash borrowings made by the MASTER UCITS

The MASTER UCITS may have temporary recourse, and up to 10% of its net assets may be invested in borrowings, particularly in order to optimise cash management.

7. Temporary purchases and sales of securities carried out by the MASTER UCITS

The MASTER UCITS will not carry out temporary purchases and sales of securities.

8. Information relating to the financial guarantees of the MASTER UCITS

In all cases where the investment strategy used exposes the MASTER UCITS to a counterparty risk, in particular in the context of the use by the MASTER UCITS of forward exchange contracts negotiated over-the-counter and/or in the context of temporary purchases and sales of securities (the fund will not carry out these transactions), the MASTER UCITS may receive securities and/or cash which are considered as guarantees in order to reduce the counterparty risk linked to these transactions.

Any financial guarantee received by the MASTER UCITS shall be returned in full ownership to the MASTER UCITS and delivered in the account of the MASTER UCITS opened in the books of its custodian. In this respect, the financial guarantees received will be recorded in the assets of the MASTER UCITS. In the event of default of the counterparty, the MASTER UCITS may dispose of the assets received from the counterparty in order to extinguish the debt of this counterparty towards the MASTER UCITS within the framework of the guaranteed transaction.

Any financial guarantee received by the MASTER UCITS in this context must comply with the criteria defined by the laws and regulations in force, particularly in terms of liquidity, valuation, credit quality of issuers, correlation, risks related to the management of guarantees and applicability. In particular, the guarantees received must comply with the following conditions:

- (a) Any guarantee received must be of high quality, offer a level of liquidity in line with the minimums defined by the Management Company's risk management and be traded on a regulated market or multilateral trading facility with transparent pricing in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must comply with correlation limits (set by the Management Company's risk management department) calculated under financial contracts under EMIR regulations;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the net asset value of the MASTER UCITS;
- (e) The MASTER UCITS's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

In accordance with the abovementioned conditions, the guarantees received by the MASTER UCITS may be composed of:

- 1) liquid assets or equivalent assets, including in particular short-term bank deposits and market instruments monetary;
- 2) bonds issued or guaranteed by an OECD Member State, its local authorities or institutions and supranational bodies of a Community, regional or global nature or by any other country, provided that the conditions (a) to (e) (above) are fully met;
- 3) equities or units issued by money market funds calculating a daily net asset value and rated AAA or equivalent;
- 4) equities or units issued by CIUs investing mainly in bonds/shares indicated in points 5) and 6) below;
- 5) bonds issued or guaranteed by first-class issuers offering adequate liquidity (and whose financial rating is at least equal to BBB- (S&P and/or Fitch, and its equivalent at Moody's);
- 6) equities admitted to or traded on a regulated market in an EU Member State, on a stock exchange in an OECD Member State or on a stock exchange in another country provided that conditions (a) to (e) (above) are fully complied with and that such equities are included in a first-rate index.

Policy related to discounts:

The MASTER UCITS's management company will apply a margin to the financial guarantees received by the MF. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Guarantees received in a currency other than the Euro may be subject to an additional margin.

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- Placed as a deposit to an approved institution;
- Invested in government bonds of highest grade;
- Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

Risk profile:

The shareholder's money will mainly be invested in units of the MASTER UCITS.

The risk profile of the Compartment is identical to that of the MASTER UCITS (see below).

Reminder of the risk profile of the MASTER UCITS:

Risk of capital loss

The capital invested in the MASTER UCITS is not guaranteed. Holders are liable to lose all or part of their initial investment.

Risk that the management objective of the MASTER UCITS may not be achieved

There can be no guarantee that the Management Objective of the MASTER UCITS will be achieved. There is no certainty that the Management Company will be able to allocate the assets of the MASTER UCITS in a profitable manner and the MASTER UCITS could suffer losses despite a concomitant positive performance of certain financial markets.

Equity risk

The MASTER UCITS may be exposed directly or indirectly to equities. The price of a share may go up or down and may in particular reflect changes in the risks associated with the issuing company or the economic situation of the corresponding market, but may also fluctuate according to investors' expectations. Equity markets have historically shown greater price volatility than fixed income markets. In particular, the MASTER UCITS may be exposed to small and medium capitalisation companies, which may increase market and liquidity risks. These price variations may therefore negatively affect the net asset value of the MASTER UCITS.

Currency risk

The MASTER UCITS may be exposed to foreign exchange risk resulting from its direct or indirect exposure to assets listed in currencies other than the euro. Fluctuations in the exchange rates of these currencies against the euro may therefore negatively affect the net asset value of the MASTER UCITS.

Interest rate risk

The price of a bond or debt security depends on changes in interest rates. In general, the price of a bond rises when interest rates fall and falls when interest rates rise. Interest rate risk is generally greater for investments with a long duration or maturity. Changes in interest rates may therefore have a positive or negative influence on the net asset value of the MASTER UCITS.

Credit risk

If the issuer of a debt security (including convertible bonds) to which the MASTER UCITS is directly or indirectly exposed is no longer able to meet its maturities, the value of the security concerned may fall, resulting in a fall in the net asset value of the MASTER UCITS. A deterioration in the creditworthiness of one or more issuers of debt securities to which the MASTER UCITS is directly or indirectly exposed may lead to a depreciation in the valuation of the securities concerned and may therefore have a negative impact on the MASTER UCITS. In particular, the MASTER UCITS may be exposed to speculative bonds rated non-investment grade. In the event of default or insolvency of the issuer concerned, these bonds may be subject to a higher risk of loss than bonds of higher credit quality.

Risks related to derivative instruments

The MASTER UCITS may use Financial Contracts, in particular forwards, listed or over-the-counter options and swaps. Exposure to Financial Contracts may involve a high level of risk. The amount required to initiate a position in Financial Contracts is potentially much less than the exposure obtained through these contracts, which implies a "leverage effect" at the level of each transaction. The market value of Financial Contracts is highly volatile and may therefore be subject to significant variations.

Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher and prices may be more volatile. These different fluctuations in value and price may therefore adversely affect the net asset value of the MASTER UCITS.

Investment in "Non-Investment Grade" credit rating securities (speculative or "High Yield" bonds)

The MASTER UCITS will be exposed to speculative bonds rated "non-investment grade" (or "high-yield" bonds).

) or to speculative obligations that are not rated by any agency but are deemed to be of comparable quality to "non-investment grade" bonds. In the event of default or insolvency of the issuer concerned, these bonds may be subject to a higher risk of loss, in income and/or capital, than bonds with comparable characteristics but of higher credit quality. Their market value may also be more volatile.

Counterparty risk

The MASTER UCITS is particularly exposed to counterparty risk resulting from its use of OTC financial contracts or effective portfolio management techniques. It is exposed to the risk of bankruptcy, payment default or any other type of default by any counterparty with which it has entered into a contract or transaction. In the event of default by the counterparty, the Financial Contract may be terminated early and the MASTER UCITS shall, where applicable, enter into another contract with a third party counterparty under the market conditions prevailing at the time of the occurrence of this event. The realisation of this risk may in particular cause losses for the MASTER UCITS and have an impact on the ability of the MASTER UCITS to achieve its management objective. In accordance with the regulations applicable to a MF, the counterparty risk may not exceed 10% of the total value of the assets of the MF per counterparty. When Societe Generale acts as a counterparty to a Financial Contract or to temporary acquisitions and/or sales of securities, conflicts of interest may arise between the Management Company of the MASTER UCITS and the counterparty. The Management Company manages these risks of conflicts of interest by implementing procedures designed to identify them, limit them and ensure that they are resolved equitably, where applicable.

Risks related to exposure to emerging and developing markets

Exposure to emerging markets entails a greater risk of loss than that applicable to investments made in developed markets due, for example, to increased volatility in these markets or risk of economic and/or political instability.

Risk related to raw materials:

Raw materials markets often face greater and more variable risks than other markets. The price of raw materials can therefore be very volatile, which could adversely affect the performance of the MASTER UCITS.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber.

The Compartment is intended for the needs of investors with low risk aversion. The level of risk depends, in particular, on market configurations and the return prospects of the various asset classes.

The investor's attention is therefore drawn to the fact that the proportion of the various financial securities in the assets of the MASTER UCITS is likely to evolve very significantly according to their over/undervaluation cycles.

The amount that it is reasonable to invest in this Compartment depends on the personal situation of each investor. To determine this amount, the investor should take into account his personal wealth and/or assets, his current and future money needs, as well as his desire to take risks or, on the contrary, to favour a prudent investment.

It is also recommended to sufficiently diversify your investments so as not to expose them solely to the risks of this Compartment. Investors are therefore invited to study their particular situation with their usual asset management advisor.

The minimum recommended investment duration is greater than 3 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

Information: This exercise has an exceptional duration of 3 months and 13 days.

For more details, the complete prospectus can be obtained by requesting it from the management company.

LYXOR PLANET MONDE – ANNUAL MANAGEMENT COMMENTARY

ANNUAL LETTER - 2019

Annual performance	2019
Lyxor Planet Monde	0.44%

Performance between 19/07/2019 and 31/10/2019
Source: Lyxor AM, Bloomberg

• MANAGEMENT OBJECTIVE

The Lyxor Planet World Compartment is a feeder fund. As such, the Compartment permanently invests at least 85% or more of its assets in units of the Lyxor Planet fund, which is a mutual fund (MF) under French law, hereinafter referred to as the MASTER UCITS.

The management objective of the MASTER UCITS is to achieve capital appreciation by capturing the performance of different global asset classes by investing in listed index-linked UCITS ("UCITS ETF"), while limiting the average annual volatility of the MASTER UCITS to around 7.

The MASTER UCITS will invest mainly in a portfolio of trackers (or ETF), i.e. "index" UCITS that have been admitted to trading on a regulated market.

The investment strategy of the MASTER UCITS is based on a methodology and proprietary tools developed by the Management Company that enable the systematic evaluation of the long-term return and risk prospects of the main global asset classes (equities, bonds, raw materials and currencies) within the framework of geographical, sectoral or thematic approaches. The result is a diversified and flexible exposure that is built according to a dynamic and discretionary management process.

The Lyxor Planet World Compartment was launched on 17/07/2019.

• Performance review

Between the launch date (19/07/2019) and 31/10/2019, Lyxor Planet Monde's performance was 0.44%, in line with that of the Master fund. This performance was achieved in a bull equity market, driven by developed countries, with a special mention for the Japanese and European markets.

Over the period, bonds, for their part, benefited from a monetary policy environment that remained extremely accommodative.

Market indicators	31-Oct	Performance* % / bps
Equities, S&P 500	3,038	2.0%
Equities, Eurostoxx 50	3,604	3.6%
Equities, Nikkei 225	22,927	6.8%
Equities, MSCI World	1,710	1.8%
Equities, MSCI emerging countries	57,978	-0.2%
Bonds, US, 10 years	1.69	-36
Bonds, Germany, 10 years	-0.41	-8
Bonds, Japan, 10 years	-0.13	0
Credit, US Inv. Grade	55	0.9
Credit, US High Yield	338	1.9
Credit, Euro Crossover spread	240	-12
EUR/USD	1.12	-0.6%
USD/JPY	108	0.3%
Raw materials (CRB)	177	-0.9%

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the CIU: the method chosen is the commitment method.

ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Due to the investment policy of this fund, Lyxor will not disclose any metrics in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

Breakdown of the fixed and variable compensation for the financial year

The beneficiaries of the remuneration paid for all investment vehicles managed by Lyxor International Asset Management represent a population of 95 people, equivalent to 93 full-time positions.

Lyxor International Asset Management	Employees	Full Time Equivalent	€ fixed compensation	€ variable compensation	€ total
Total population	95	93	7,034,345	4,644,200	11,678,545
Regulated population	28	26.4	2,129,500	2,397,752	4,527,252
Of which management teams	22	22	1,600,252	1,009,000	2,669,252
Of which other regulated people	6	4.4	737,500	1,120,500	1,858,000

(*) For employees who joined the Management Company during the financial year, the calculation of remuneration indicated above is based solely on the remuneration received from the date of arrival of the employee concerned.

No carried interest was paid during the financial year.

Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the AIF or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the following Internet site:

<https://www.lyxor.com/politiques>

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at www.lyxor.com

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

In the course of the fiscal year, the CIU did not perform financing operations subject to the Securities Financing Transactions Regulation, i.e. repos, securities or commodities lending/borrowing transactions, buy-sell back or sell-buy back transactions, margin lending transactions, or total return swaps (TRS).

1 Accounting rules and methods

The annual accounts are presented in the form required by the amended Regulation ANC No. 2014-01.

Information: This exercise has an exceptional duration of 3 months and 13 days.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of UCITS under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters the day of the Compartment's net asset value.

Posting method for the negotiation fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

The following fees can be added to the operation and management fees (see summary Table hereinafter):

Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment; Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

appendix

Fees invoiced to the COMPARTMENT	Basis	Schedule rate
Financial management fees and administrative fees external to the portfolio management company (Auditor, Depository, distribution, lawyers) including tax ⁽¹⁾	Net assets	maximum 1.20% per year

⁽¹⁾ Pursuant to the Tax Instruction of 4 March 1993 of the French General Tax Department, the unit tax credit is determined on the ex-dividend date by dividing the total amount of the tax credits among the shares outstanding on that date.

⁽²⁾ The unit capitalization corresponds to the sum of income and net capital gains and losses on the number of shares in circulation. This calculation method has been applied since 1 January 2013.

Date of creation of the Compartment: 19 July 2019.

4. Inventory as of 31.10.2019
