Wellington Emerging Local Debt Fund

USD Class GR Accumulating Unhedged

Wellington Emerging Local Debt Fund (the "Fund") a Fund of Wellington Management Funds (Ireland) plc (the "Company")

ISIN: IE00B129GR07

OBJECTIVES AND INVESTMENT POLICY

- The Fund seeks long-term total returns (capital appreciation and income).
- The Fund will be actively managed against the JP Morgan Government Bond Index – Emerging Markets Global Diversified Index (the "Index"), investing primarily in emerging market local currency-denominated bonds. The Index consists of domestic currency government bonds to which international investors can gain exposure. The Index uses a weighting scheme to reduce the weight of large countries and redistributes the excess to the smaller weight countries with a maximum weight of 10% per country. The Fund will generally be diversified by country, currency and issuer, but may hold concentrated positions from time to time.
- The Fund will invest, either directly or via derivatives, in bonds (fixed or floating rate) issued by government, sovereign, quasi-sovereign agency, supranational or corporate issuers across multiple denominations and countries. The Fund may actively manage its exposure to both emerging and developed markets currencies. Average credit quality may be below investment grade.
- Derivatives will be used to hedge (manage) risk and/or volatility and for investment purposes (such as gaining exposure to a security). Derivatives will form a significant part of the strategy and will impact performance.
- Any income allocated to the Share class from the Fund is reinvested.
- Shares can be bought or sold daily in accordance with the Prospectus.
- The Fund is intended for long-term investors. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

For full investment objectives and policy details, please refer to the Prospectus.

RISK & REWARD PROFILE

< LOWER RISK

< Typically Lower Rewards

HIGHER RISK >

Typically Higher Rewards >

The indicator is not a measure of the risk of capital loss, but a measure of the previous ups and downs in value of the Fund. It is based on historical data and may not be a reliable indicator of the Fund's future risk profile. If the Fund has been in operation for less than 5 years, representative history, such as a comparable Share class or index, may have been used to create the indicator.

- The indicator may shift over time and is not a target or guarantee.
- The lowest category does not represent a risk-free investment.
- The Fund is classified as a 5 as over the past 5 years the average amount by which returns varied each year was equal to or above 10% and less than 15%.

MATERIAL RISKS RELEVANT TO THE FUND WHICH ARE NOT FULLY CAPTURED BY THE INDICATOR:

BELOW INVESTMENT GRADE: Lower rated or unrated securities may have a significantly greater risk of default than investment grade securities, can be more volatile, less liquid, and involve higher transaction costs.

CAPITAL: Investment markets are subject to economic, regulatory, market sentiment and political risks. All investors should consider the risks that may impact their capital, before investing. The value of your investment may become worth more or less than at the time of the original investment. The Fund may experience a high volatility from time to time.

COUNTERPARTY: The institutions, with which the Fund may trade or invest, or to which assets may be entrusted, may fail to meet their obligations which could impact the operational capability or value of your investment.

CREDIT: The value of a bond may decline, or the issuer/guarantor may fail to meet payment obligations. Typically lower-rated bonds carry a greater degree of credit risk than higher-rated bonds.

CURRENCY: The value of the Fund may be affected by changes in currency exchange rates. Unhedged currency risk may subject the Fund to significant volatility.

DERIVATIVES: Specific risks such as operational issues, complexity, and valuation may be linked to the possible use of derivatives.

EMERGING MARKETS: Emerging markets may be subject to custodial and political risks, and volatility. Investment in foreign currency entails exchange risks.

HEDGING: Any hedging strategy using derivatives may not achieve a perfect hedge.

INTEREST RATES: The value of bonds tends to decline as interest rates rise. The change in value is greater for longer term than shorter term bonds.

LEVERAGE: The use of leverage can provide more market exposure than the money paid or deposited when the transaction is entered into. Losses may therefore exceed the original amount invested.

LIQUIDITY: The Fund may invest in securities that are less liquid and may be more difficult to buy or sell in a timely fashion and/or at fair value.

OPERATIONAL: The impact of breakdowns in systems, internal procedures and human error.

A more detailed description of the risk factors that apply to the Fund is set out in the section "Risk Factors" in the Prospectus.
