The accompanying notes are an integral part of these Consolidated Financial Statements (IFRS).

2

Notes to the IFRS Consolidated Financial Statements

2.1 Basis of Preparation

1. The Company

The accompanying IFRS Consolidated Financial Statements European public limited liability company (société par actions) Airbus SE (statutaire zetel) in Amsterdam, The Netherlands, its registered address at Mendelweg 30, 2333 CS Leiden, The Netherlands, and registered with the Dutch Commercial Register (Handelsregister) under number 24288945. The Company's reportable segments are Airbus, Airbus Helicopters and Airbus Defence and Space (see "– Note 11: Segment Information"). The Company is listed on the European stock exchanges in Paris, Frankfurt am Main, Madrid, Barcelona, Valencia and Bilbao. The IFRS Consolidated Financial Statements were authorised for issue by the Company's Board of Directors on 16 February 2022.

2. Impact of the COVID-19 pandemic

In 2020, the COVID-19 pandemic resulted in significant disruption to the Company's business operations and supply chain. For more details on the impact in 2020, please refer to the Company's IFRS Consolidated Financial Statements as of 31 December 2020.

The Company's business, results of operations and financial condition have been and may continue to be materially affected by the COVID-19 pandemic, and the Company continues to face risks and uncertainties. In addition to its impact on the financial viability of operators, airlines and lessors and the reduction of commercial air traffic, new variants of the COVID-19 pandemic, lockdowns, travel limitations and restrictions around the world have posed logistical challenges and may cause disruptions to the Company's business, its operations and supply chain as well as customers' ability to take delivery of aircraft.

Airlines have reduced capacity, grounded portions of their fleets and sought to implement measures to reduce cash spending and secure liquidity. Some airlines have also sought arrangements with creditors, restructured or applied for bankruptcy or insolvency protection, which may have further consequences for the Company and its order book as well as other consequences resulting from the related proceedings.

In 2021, the commercial environment has shown signs of improvements, in particular an increase in air travel demand.

On 27 May 2021, the Company provided suppliers with an update of its production plans based on its expectation that the commercial aircraft market may recover to pre-COVID levels between 2023 and 2025, led by the single-aisle segment. In anticipation of a continued recovering market, the Company confirmed an average A320 Family production rate of 45 aircraft per month in the fourth quarter of 2021 and called on suppliers to prepare for the future by securing a firm rate of 64 by the second quarter of 2023. The A220 monthly production rate is confirmed to rise to around 6 in early 2022. The A350 production rate is expected to increase to 6 by Autumn 2022 while A330 production is expected to remain at an average monthly production rate of two per month.

On 28 October 2021, the Company announced the A220 production rate, which was at 5 aircraft a month, is expected to increase to around rate 6 per month in early 2022, with a monthly production rate of 14 envisaged by the middle of the decade. On the A320 Family programme, the Company is working to secure the ramp up and is on trajectory to achieve a monthly rate of 65 aircraft by summer 2023. The recent commercial successes of the A330 programme enable a monthly rate increase from around 2 to almost 3 aircraft at the end of 2022. The A350 programme is expected to increase from around 5 to around 6 aircraft a month in early 2023.

Year-to-date financials reflect deliveries as well as efforts on cost containment and competitiveness. Furthermore, the Company has performed a comprehensive review of provisions and depreciations, taking into account the amended production rates and expected future deliveries. Consequently, the Company recorded € 0.6 billion of release of COVID-related provisions including restructuring in 2021.

AIRBUS - FINANCIAL STATEMENTS 2021 - 11

In 2020, the review performed led to charges being recorded for an amount of € 1.3 billion and a restructuring provision for an amount of € 1.2 billion.

The Company is monitoring the evolution of the COVID-19 pandemic and will continue to assess further impacts going forward.

Management considers the Company has sufficient resources to continue operating for at least 12 months and that there are no material uncertainties about the Company's ability to continue as a going concern.

3. Significant Accounting Policies

Basis of preparation — The Company's Consolidated Financial Statements are prepared in accordance with International Financial Reporting Standards ("IFRS"), issued by the International Accounting Standards Board ("IASB") as endorsed by the European Union ("EU") and Part 9 of Book 2 of the Netherlands Civil Code. When reference is made to IFRS, this intends to be EU-IFRS.

The Consolidated Financial Statements have been prepared on a historical cost basis, unless otherwise indicated. They are prepared and reported in euro ("€") and all values are rounded to the nearest million appropriately. Due to rounding, numbers presented may not add up precisely to the totals provided and percentages may not precisely reflect the absolute figures.

The Company describes the accounting policies applied in each of the individual notes to the Financial Statements and avoids repeating the text of the standard, unless this is considered relevant to the understanding of the note's content. The Company's accounting policies and methods are unchanged compared to 31 December 2020. The implementation of other amended standards has no material impact on the Company's Consolidated Financial Statements as of 31 December 2021. The most significant accounting policies are described below, and have been updated accordingly.

Revenue recognition — Revenue is recognised when the Company transfers control of the promised goods or services to the customer. The Company measures revenue, for the consideration to which the Company is expected to be entitled in exchange for transferring promised goods or services. Variable considerations are included in the transaction price when it is highly probable that there will be no significant reversal of the revenue in the future. The Company identifies the various performance obligations of the contract and allocates the transaction price to these performance obligations. Advances and pre-delivery payments (contract liabilities) are received in the normal course of business and are not considered to be a significant financing component as they are intended to protect the Company from the customer failing to complete its contractual obligations.

Incurred inefficiency cost such as the unexpected cost of materials, labour hours expended or other resources consumed do not generate revenue as they do not contribute to the Company's progress in satisfying the performance obligations.

Revenue from the sale of commercial aircraft is recognised at a point in time (*i.e.* at delivery of the aircraft). The Company estimates the amount of price concession granted by the Company's engine suppliers to their customers as a reduction of both revenue and cost of sales.

An aircraft can remain in storage under a bill-and-hold arrangement. In such cases, revenue is recognised when the requirements for the transfer of control under a bill-and-hold arrangement are fulfilled.

Revenue from the sale of military aircraft, space systems and services — When control of produced goods or rendered services is transferred over time to the customer, revenue is recognised over time, *i.e.* under the percentage of completion method ("PoC" method).

The Company transfers control over time when:

- it produces a good with no alternative use and the Company has an irrevocable right to payment (including a reasonable margin) for the work completed to date, in the event of contract termination at the convenience of customers (*e.g.* Tiger contract); or
- it creates a good which is controlled by the customer as the good is created or enhanced (*e.g.* Eurofighter contracts, some border security contracts, A400M development); or

- the customer simultaneously receives and consumes the benefits provided by the Company (e.g. maintenance contracts).

For the application of the over time method (PoC method), the measurement of progress towards complete satisfaction of a performance obligation is based on inputs (i.e. cost incurred).

When none of the criteria stated above have been met, revenue is recognised at a point in time. For instance, revenue is recognised at the delivery of aircraft under IFRS 15 from the sale of military transport aircraft, from the A400M launch contract and most of NH90 serial helicopters' contracts.

Provisions for onerous contracts — The Company records provisions for onerous contracts when it becomes probable that the total contract costs will exceed total contract revenue. Before a provision for onerous contracts is recorded, the related assets under construction are measured at their net realisable value and written-off if necessary. Onerous contracts are identified by monitoring the progress of the contract together with the underlying programme status. An estimate of the related contract costs is made, which requires significant and complex assumptions, judgements and estimates related to achieving certain performance standards (see “– Note 4: Key Estimates and Judgements”, “– Note 12: Revenue and Gross Margin” and “– Note 24: Provisions, Contingent Assets and Contingent Liabilities”).

AIRBUS - FINANCIAL STATEMENTS 2021 - 12

Research and development expenses — The costs for internally generated research are expensed when incurred. The costs for internally generated development are capitalised when:

- the product or process is technically feasible and clearly defined (i.e. the critical design review is finalised);
- adequate resources are available to successfully complete the development;
- the benefits from the assets are demonstrated (a market exists or the internal usefulness is demonstrated) and the costs attributable to the projects are reliably measured;
- the Company intends to produce and market or use the developed product or process and can demonstrate its profitability.

Income tax credits granted for research and development activities are deducted from corresponding expenses or from capitalised amounts when earned.

Capitalised development costs, are recognised either as intangible assets or, when the related development activities lead to the construction of specialised tooling for production (“jigs and tools”), or involve the design, construction and testing of prototypes and models, as property, plant and equipment. Capitalised development costs are generally amortised over the estimated number of units produced. If the number of units produced cannot be estimated reliably, they are amortised over the estimated useful life of the internally generated intangible asset. Amortisation of capitalised development costs is recognised in cost of sales.

Inventories are measured at the lower of acquisition cost (generally the average cost) or manufacturing cost and net realisable value. Manufacturing costs comprise all costs that are directly attributable to the manufacturing process, such as direct material and labour, and production related overheads (based on normal operating capacity and normal consumption of material, labour and other production costs), including depreciation charges. Net realisable value is the estimated selling price in the ordinary course of the business less the estimated costs to complete the sale.

Transactions in foreign currency, i.e. transactions in currencies other than the functional currency of an entity of the Company, are translated into the functional currency at the foreign exchange rate prevailing at the transaction date. Monetary assets and liabilities denominated in foreign currencies at the end of the reporting period are remeasured into the functional currency at the exchange rate in effect at that date. Except when deferred in equity as qualifying cash flow hedges (see “– Note 37: Financial Instruments”), these foreign exchange remeasurement gains and losses are recognised, in line with the underlying item:

- in profit before finance costs and income taxes if the substance of the transaction is commercial (including sales financing transactions); and
- in finance costs for financial transactions.

Non-monetary assets and liabilities denominated in foreign currencies that are stated at historical cost are translated into functional currency at the foreign exchange rate in effect at the date of the transaction. Translation differences on non-monetary financial assets and liabilities that are measured at fair value are reported as part of the fair value gain or loss. However, translation differences of non-monetary financial assets measured at fair value and classified as fair value through other comprehensive income (“OCI”) are included in accumulated other comprehensive income (“AOCI”).

Hedge accounting — Most of the Company’s revenue is denominated in US dollar (“US\$”), while a major portion of its costs are incurred in euro. The Company is significantly exposed to the risk of currency changes, mainly resulting from US\$/€ exchange rates. Furthermore, the Company is exposed, though to a much lesser extent, to foreign exchange risk arising from costs incurred in currencies other than the euro and to other market risks such as interest rate risk, commodity price and equity price risk.

In order to manage and mitigate those risks, the Company enters into derivative contracts. The Company applies hedge accounting to its derivative contracts whenever the relevant IFRS criteria can be met. Hedge accounting ensures that derivative gains or losses are recognised in profit or loss (mainly in revenue) in the same period that the hedged items or transactions affect profit or loss.

The major portion of the Company’s derivative contracts is accounted for under the cash flow hedge model. The fair value hedge model is used only for certain interest rate derivatives. Derivative contracts which do not qualify for hedge accounting are accounted for at fair value through profit or loss; any related gains or losses being recognised in financial result.

The Company’s hedging strategies and hedge accounting policies are described in more detail in “– Note 37: Financial Instruments”.

AIRBUS - FINANCIAL STATEMENTS 2021 - 13

4. Key Estimates and Judgements

The preparation of the Company's Consolidated Financial Statements requires the use of estimates and assumptions. In preparing these Financial Statements, management exercises its best judgement based upon its experience and the circumstances prevailing at that time. The estimates and assumptions are based on available information and conditions at the end of the financial period presented and are reviewed on an ongoing basis. Key estimates and judgements that have a significant influence on the amounts recognised in the Company's Consolidated Financial Statements are mentioned below:

Impairment of long-life assets, work in progress and finished aircraft — In testing long-life assets such as jigs and tools and capitalised development costs for impairment, the Company makes estimates on the number and timing of aircraft units to be delivered in the future, the margin of these aircraft, and the discount rate associated with the aircraft programme. For aircraft that may need to be remarketed, the impairment of working progress and finished aircraft is assessed based on an estimation of the future selling price and associated remarketing costs.

Revenue recognition for performance obligations transferred over time — The PoC method is used to recognise revenue for performance obligations transferred over time. This method places considerable importance on accurate estimates at completion as well as on the extent of progress towards completion. For the determination of the progress of the performance obligations, significant estimates include total contract costs, remaining costs to completion, total contract revenue, contract risks and other judgements.

The management of the segments continually review all estimates involved in such performance obligations and adjusts them as necessary (see “– Note 22: Contract Assets and Contract Liabilities, Trade Receivables and Trade Liabilities”).

Provisions — The evaluation of provisions, such as onerous contracts, program-related provisions and restructuring measures are based on best estimates. Onerous contracts are identified by monitoring the progress of the contract and the underlying programme performance. The associated estimates of the relevant contract costs require significant judgement related to performance achievements. Depending on the size and nature of the Company's contracts and related programmes, the extent of assumptions, judgements and estimates in these monitoring processes differs. In particular, the introduction of commercial or military aircraft programmes (e.g. A400M) or major derivative aircraft programmes involves an increased level of estimates and judgements associated with the expected development, production and certification schedules and expected cost components (see “– Note 24: Provisions, Contingent Assets and Contingent Liabilities”).

In view of overall commercial relationships, contract adjustments may occur, and must be considered on a case by case basis.

Estimates and judgements are subject to change based on new information as contracts and related programmes progress. Furthermore, the complex design and manufacturing processes of the Company's industry require challenging integration and coordination along the supply chain including an ongoing assessment of suppliers' assertions which may additionally impact the outcome of these monitoring processes.

A restructuring provision is recognised when the Company has developed a detailed formal plan for the restructuring and has raised a valid expectation in those affected that it will carry out the restructuring by starting to implement the plan or announcing its main features to those affected by it. The measurement of a restructuring provision is at the best estimate of the anticipated costs and includes only the direct expenditures arising from the restructuring, which are those amounts that are both necessarily entailed by the restructuring and not associated with the ongoing activities of the Company.

Hedge accounting — The hedge portfolio covers a large portion of the Company's highly probable forecasted transactions derived from its commercial activities. The Company makes estimates and judgement in assessing the highly probable criteria of the forecasted transactions, in order to anticipate future events, as risk of future cancellations of orders (see “– Note 37: Financial Instruments”).

Employee benefits — The Company accounts for pension and other post-retirement benefits in accordance with actuarial valuations. These valuations rely on statistical and other factors in order to anticipate future events. The actuarial assumptions may differ materially from actual developments mainly due to changing market and economic conditions and therefore result in a significant change in post-retirement employee benefit obligations and the related future expenses (see “– Note 31: Post-Employment Benefits”).

Legal contingencies — The Company is party to litigations related to a number of matters as described in “– Note 38: Litigation and Claims”. The outcome of these matters may have a material effect on the financial position, results of operations or cash flows of the Company. Management regularly analyses current information concerning these matters and provides provisions for probable cash outflows, including the estimate of legal expenses to resolve the matters. Internal and external lawyers are used for these assessments. In making the decision regarding the need for provisions, management considers the degree of probability of an unfavourable outcome and the ability to make a sufficiently reliable estimate of the amount of loss. The filing of a suit or formal assertion of a claim against the Airbus companies or the disclosure of any such suit or assertion, does not automatically indicate that a provision may be appropriate.

Income taxes — The Company operates and earns income in numerous countries and is subject to changing tax laws in multiple jurisdictions within these countries. Significant judgements are necessary in determining the worldwide income tax liabilities. Although management believes that it has made reasonable estimates about the final outcome of tax uncertainties, no assurance can be given that the final tax outcome of these matters will be consistent with what is reflected in the historical income tax provisions. At each end of the reporting period, the Company assesses whether the realisation of future tax benefits is probable to recognise deferred tax assets. This assessment requires the exercise of judgement on the part of management with respect to, among other things, benefits that could be realised from available tax strategies and future taxable income, as well as other positive and negative factors.

AIRBUS - FINANCIAL STATEMENTS 2021 - 14

The recorded amount of total deferred tax assets could be reduced, through valuation allowances recognition, if estimates of projected future taxable income and benefits from available tax strategies are lowered, or if changes in current tax regulations are enacted that impose restrictions on the timing or extent of the Company's ability to utilise future tax benefits. The basis for the recoverability test of deferred tax assets is the same as the Company's latest operative planning also taking into account certain qualitative aspects regarding the nature of the temporary differences. Qualitative factors include but are not limited to an entity's history of planning accuracy, performance records, business model, backlog, existence of long-term contracts as well as the nature of temporary differences (see “– Note 17: Income Taxes”).

Other subjects that involve assumptions and estimates are further described in the respective notes (see “– Note 8: Acquisitions and Disposals”, “– Note 19: Intangible Assets” and “– Note 22: Contract Assets, Contract Liabilities and Trade Receivables, and Trade Liabilities”).

5. Change in Accounting Policies and Disclosures

The accounting policies applied by the Company in preparation of its 2021 year-end Consolidated Financial Statements are the same as applied for the previous year. Other than that, amendments, improvements to and interpretations of standards effective from 1 January 2021 have no material impact on the Consolidated Financial Statements.

New, Revised or Amended IFRSs Applied from 1 January 2021

Amendments to IFRS 16 Leases: Covid-19- Related Rent Concessions beyond 30 June 2021

In March 2021, the IASB issued COVID-19-related Rent Concessions beyond 30 June 2021 to extend by another year the practical relief to lessees in accounting for rent concessions occurring as a direct consequence of COVID-19.

The Company has applied in advance of its effective date the practical expedient retrospectively to all rent concessions that meet the conditions of the practical expedient and has accounted for them in the same manner as for a resolution of a contingency that fixes previously variable lease payments.

As such, the Company has not updated the discount rate used to re-measure the lease liability and used the re-measured consideration with a corresponding adjustment to the right-to-use. The Company re-assessed that the application of this amendment, with the extension of the relief until 30 June 2022, has still no material impact on the Consolidated Financial Statements as of 31 December 2021.

Amendments to IFRS 9, IAS 39 and IFRS 7 "Interest Rate Benchmark Reform – Phase 2"

Following the financial crisis, the reform and replacement of some benchmark interest rates such as LIBOR and other Interbank Offered Rates ("IBORs") has become a priority for global regulators. There is still some uncertainty around the timing and precise nature of these changes.

The Company's treasury is managing the transition plan, so that the existing contracts that refer to LIBORs shall be adjusted to ensure contract continuity after cessation of relevant benchmarks and address term and credit differences between LIBORs and alternative reference rates. The changed reference rates will also impact systems, processes and risk and valuation models.

To manage the transition of the USD LIBOR-referenced derivatives contracts, the Company will adhere to the ISDA Fallback protocol that ensures an automatic transition on the official cessation date scheduled on 30 June 2023 as stated by the UK FCA (Financial Conduct Authority) on 5 March 2021. The official spread adjustment published by Bloomberg and fixed on 5 March 2021 (official announcement date of the LIBOR cessation) will apply. On USD LIBOR-referenced loan contracts, the Company will apply a similar transition scheme to the derivative contracts.

The Company is mainly exposed to USD LIBOR under Airbus Bank loan assets portfolio for an amount of € 301 million (for a notional amount of US\$ 524 million) and the interest rate swaps based on USD LIBOR used in the hedge relationship, for an amount of € 64 million (for a notional amount of US\$ 1.5 billion) as developed under "– Note 37: Financial Instruments".

The Phase 2 amendments have no impact on these Consolidated Financial Statements as existing contracts continue to refer to LIBORs as of 31 December 2021.

AIRBUS - FINANCIAL STATEMENTS 2021 - 15

Agenda Decision published by the IFRS Interpretation Committee ("IFRIC")

In April 2021, IFRIC published an agenda decision, "Configuration or Customisation Costs in a Cloud Computing Arrangement", which considered how an entity should account for configuration and customisation costs incurred in implementing these service arrangements. IFRIC concluded that these costs should be expensed, unless the criteria for recognising a separate asset are met. The Company is currently undertaking the analysis required to quantify the potential impact and assessing whether a change in accounting policy would be required or not.

New, Revised or Amended IFRSs Issued but not yet Applied

A number of new or revised standards, amendments and improvements to standards as well as interpretations are not yet effective for the year ended 31 December 2021 and have not been applied in preparing these Consolidated Financial Statements and early adoption is not planned:

Standards and amendments	IASB effective date for annual reporting periods beginning on or after	Endorsement status
Amendments to IFRS 3: Reference to the Conceptual Framework	1 January 2022	Endorsed
Amendments to IAS 16: Property, Plant and Equipment – Proceeds before Intended Use	1 January 2022	Endorsed
Amendments to IAS 37: Onerous Contracts – Cost of Fulfilling a Contract	1 January 2022	Endorsed
Annual Improvements to IFRS Standards 2018–2020	1 January 2022	Endorsed
IFRS 17 "Insurance Contracts"	1 January 2023	Endorsed
Amendments to IAS 1: Classification of Liabilities as Current or Non-current	1 January 2023	Not yet endorsed
Amendments to IAS 8: Definition of Accounting Estimates	1 January 2023	Not yet endorsed
Amendments to IAS 1: Disclosure of Accounting Policies	1 January 2023	Not yet endorsed
Amendments to IAS 12: Deferred Tax related to Assets and Liabilities arising from a Single Transaction	1 January 2023	Not yet endorsed
Amendments to IFRS 17: Initial Application of IFRS 17 and IFRS 9 – Comparative Information	1 January 2023	Not yet endorsed

6. Climate impacts

Climate change may have a major impact on both the Company's industrial operations and its upstream and downstream value chain, including aircraft direct operations and the wider air transport ecosystem along with a strong influence on regulations and stakeholders expectations. Accordingly, climate-related risks can potentially affect the Company's business and competitiveness, its customers and other actors in the aviation industry. For further information on climate-related risks, please refer to the Report of the Board of Directors –

4.6 Risk Factors – “Climate-Related Risks”. For more details on specific impacts, see “– Note 19: Intangible assets”, “– Note 20: Property, Plant and Equipment” and “– Note 33: Remuneration”.

The Company is committed to contributing to meeting the Paris Agreement targets and in taking a leading role in the decarbonisation of the aviation sector in cooperation with all stakeholders. For further information, please refer to the Report of the Board of Directors – 6.1 Non-Financial Information – 6.1.2 “Lead the Journey Towards Clean Aerospace”.

The Company continuously assesses potential impacts of identified environmental risks and opportunities. As of 31 December 2021, to the best of the Company’s judgement, there is no impact on the Company’s assets and liabilities. The Company considered the assumptions related to the life cycle of its main programmes and the related impacts on long-lived assets impairments and concluded that there was no need for impairment. Similarly, the Company did not identify any need for revision to the useful lives of the property, plant and equipment and intangible assets.

The Company shares the EU’s ambition to reach a net-zero carbon aviation ecosystem in Europe by 2050, and will contribute to the EU’s “2030 Climate Target Plan”. Further sustainability activities will continue to accelerate, especially with the objective to bring a zero emission commercial aircraft to market in 2035.

AIRBUS - FINANCIAL STATEMENTS 2021 - 16

2.2 Airbus Structure

7. Scope of Consolidation

Consolidation — The Company’s Consolidated Financial Statements include the Financial Statements of Airbus SE and all material subsidiaries controlled by the Company. The Company’s subsidiaries prepare their Financial Statements at the same reporting date as the Company’s Consolidated Financial Statements (see Appendix “Simplified Airbus Structure” chart).

Subsidiaries are entities controlled by the Company including so-called structured entities, which are created to accomplish a narrow and well-defined objective. They are fully consolidated from the date control commences to the date control ceases.

The assessment of control of a structured entity is performed in three steps. In a first step, the Company identifies the relevant activities of the structured entities (which may include managing lease receivables, managing the sale or re-lease at the end of the lease and managing the sale or re-lease on default) and in a second step, the Company assesses which activity is expected to have the most significant impact on the structured entities’ return. Finally, the Company determines which party or parties control this activity.

The Company’s interests in equity-accounted investees comprise investments in associates and joint ventures. Such investments are accounted for under the equity method and are initially recognised at cost.

The Financial Statements of the Company’s investments in associates and joint ventures are generally prepared for the same reporting period as for the parent company. Adjustments are made where necessary to bring the accounting policies and accounting periods in line with those of the Company.

PERIMETER OF CONSOLIDATION

	31 December	
(Number of companies)	2021	2020
Fully consolidated entities	178	177
Investments accounted for under the equity method		
in joint ventures	57	58
in associates	23	25
Total	258	260

For more details related to unconsolidated and consolidated structured entities, see “– Note 27: Sales Financing Transactions”.

8. Acquisitions and Disposals

Business combinations are accounted for using the acquisition method, as at the acquisition date, which is the date on which control is transferred to the Company.

The determination of the fair value of the acquired assets and the assumed liabilities which are the basis for the measurement of goodwill requires significant estimates. Land, buildings and equipment are usually independently appraised while marketable securities are valued at market prices. If intangible assets are identified, depending on the type of intangible asset and the complexity of determining its fair value, the Company either consults with an independent external valuation expert or develops the fair value internally, using appropriate valuation techniques which are generally based on a forecast of the total expected future net cash flows.

These evaluations are linked closely to the assumptions made by management regarding the future performance of the assets concerned and the discount rate applied.

Loss of control, loss of joint control, loss of significant influence — Upon loss of control of a subsidiary, the assets and liabilities and any components of the Company’s equity related to the subsidiary are derecognised. Any gain or loss arising from the loss of control is recognised within other income or other expenses in the Consolidated Income Statement. If the Company retains any interest in the previous subsidiary, such interest is measured at fair value at the date the control is lost.

Assets and liabilities of a material subsidiary for which a loss of control is highly probable are classified as assets and liabilities held for sale when the Company has received sufficient evidence that the loss of control will occur in the 12 months after the classification. These assets and liabilities are presented after elimination of intercompany transactions.

When the loss of significant influence or the loss of joint control of an investment accounted for under the equity method is highly probable and is expected to occur in the coming 12 months, this associate or joint venture is classified as an asset held for sale.

Sale of investment in an associate or joint venture — Any gain or loss arising from the disposal of investment accounted for under the equity method is recognised within share of profit from investments.

8.1 Acquisitions

In 2020, Bombardier transferred its remaining shares in Airbus Canada Limited Partnership ("ACLP") to Airbus and Investissement Québec ("IQ"). As per the agreement, Airbus acquired an additional 29.64% of the issued shares in ACLP. This agreement brought the shareholdings in ACLP for Airbus and IQ to 75% and 25%, respectively.

Airbus paid to Bombardier a consideration of US\$ 591 million of which US\$ 531 million was received at closing and US\$ 60 million to be paid over the 2020-22 period under certain conditions. The agreement also provides for the cancellation of Bombardier warrants owned by Airbus, as well as releasing Bombardier of its future funding capital requirement to ACLP, previously performed through the non-voting participation Class B common units in ACLP.

The call rights of Airbus in respect of all IQ's interests in ACLP at fair market value have been extended by an additional three years to January 2026.

The effect of this equity transaction on the equity attributable to the owners of ACLP amounted to € -53 million.

As part of this transaction, Airbus, via its wholly owned subsidiary Stelia Aerospace, also acquired the A220 and A330 work package production capabilities from Bombardier in Saint Laurent, Québec. Under this non-material transaction, the fair value of the net assets acquired amounted to US\$ -4 million.

8.2 Disposals

On 15 December 2021, the Company divested to a 50% joint venture one of its sites in France. The assets relative to this disposal were previously classified as held for sale for an amount of € 67 million. The Company received a consideration of € 310 million and recognised a gain of € 122 million, reported in Airbus Defence and Space other income.

8.3 Cash Flows from Disposals including Assets and Disposal Groups Classified as Held for Sale

The following table provides details on cash flows from disposals (resulting in assets and liabilities disposed) of subsidiaries, joint ventures and businesses:

<i>(In € million)</i>	2021	2020
Total selling price received by cash and cash equivalents	310	0
Cash and cash equivalents included in the disposed subsidiaries	0	0
Total	310	0

The aggregate cash flows from assets and disposals groups classified as held for sale in 2021 result from the divestment of one of its sites in France.

9. Investments Accounted for under the Equity Method

<i>(In € million)</i>	31 December	
	2021	2020
Investments in joint ventures	1,471	1,367
Investments in associates	201	211
Total	1,672	1,578

Investments accounted for under the equity method increased by € +94 million to € 1,672 million (2020: € 1,578 million). They mainly include the equity investments in ArianeGroup, MBDA and ATR GIE.

9.1 Investments in Joint Ventures

The joint ventures in which the Company holds an interest are structured in separate incorporated companies. Under joint arrangement agreements, unanimous consent is required from all parties to the agreement for all relevant activities. The Company and its partners have rights to the net assets of these entities through the terms of the contractual agreements.

The Company's interest in its joint ventures, accounted for under the equity method, is stated in aggregate in the following table:

<i>(In € million)</i>	2021	2020
Carrying amount of the investments at 1 January	1,367	1,444
New joint ventures	49	0
Share of results from continuing operations	73	31
Share of other comprehensive income	116	(57)

Dividends received during the year	(28)	(49)
Others	(112)	(2)
Carrying amount of the investments at 31 December	1,471	1,367

The Company's individually material joint ventures are ArianeGroup, Paris (France), MBDA S.A.S., Paris (France), and ATR GIE, Blagnac (France), as parent companies of their respective groups. These joint venture companies are not publicly listed.

ArianeGroup is a 50% joint venture between the Company and Safran. ArianeGroup is the head company in a group comprising several subsidiaries and affiliates, all leading companies in their fields, such as: APP, Arianespace, Cilas, Eurokot, Eurocryospace, Europropulsion, Nucléotides, Pyroalliance, Regulus, Sodern and Starsem. ArianeGroup inherits a rich portfolio of products and services, enabling it to deliver innovative and competitive solutions to numerous customers around the world.

The Company holds a 37.5% stake in **MBDA** at 31 December 2021, which is a joint venture between the Company, BAE Systems and Leonardo. MBDA offers missile systems capabilities that cover the whole range of solutions for air dominance, ground-based air defence and maritime superiority, as well as advanced technological solutions for battlefield engagement.

ATR GIE manufactures advanced turboprop aircraft. It is a 50% joint venture between Leonardo group company and the Company. Both Leonardo and the Company provide airframes which are assembled by ATR GIE in France. The members of ATR GIE are legally entitled exclusively to the benefits and are liable for the commitments of the joint venture. ATR GIE is obliged to transfer its cash to each member of the joint venture.

The following table summarises financial information for ArianeGroup, MBDA and ATR GIE based on their Consolidated Financial Statements prepared in accordance with IFRS:

(In € million)	ArianeGroup		MBDA		ATR GIE	
	2021	2020	2021	2020	2021	2020
Revenue	3,129	2,718	4,234	3,592	707	398
Depreciation and amortisation	(157)	(128)	(165)	(143)	21	(6)
Interest income	1	9	8	5	0	0
Interest expense	(12)	(27)	(13)	(17)	0	0
Income tax expense	40	9	(112)	(119)	0	1
Profit from continuing operations	(39)	(6)	344	279	(48)	(138)
Other comprehensive income	15	(14)	266	(157)	0	0
Total comprehensive income (100%)	(24)	(20)	610	122	(48)	(138)
Non-current assets	6,129	6,111	2,727	2,687	267	262
Current assets	6,466	6,260	7,849	7,841	720	835
<i>thereof cash and cash equivalents</i>	1,223	642	2,819	2,851	6	9
Non-current liabilities	1,008	1,152	766	1,104	203	165
<i>thereof non-current financial liabilities (excluding trade and other payables and provisions)</i>	423	483	6	3	0	0
Current liabilities	7,451	7,075	8,733	8,821	662	901
<i>thereof current financial liabilities (excluding trade and other payables and provisions)</i>	129	53	21	27	0	0
Total equity (100%)	4,136	4,144	1,077	603	122	31
Equity attributable to the equity owners of the parent	4,126	4,144	1,077	603	122	31
Non-controlling interests	10	0	0	0	0	0

(In € million)	ArianeGroup		MBDA		ATR GIE	
	2021	2020	2021	2020	2021	2020
The Company's interest in equity on investee	2,063	2,072	404	226	61	15
Goodwill	244	244	282	282	0	0

Dividend adjustment	0	0	0	0	3	0
Elimination of downstream inventory	2	2	0	0	(5)	(5)
Carrying amount of the investment at 31 December	532	669	676	498	59	10

AIRBUS - FINANCIAL STATEMENTS 2021 - 19

The development of these investments is as follows:

(In € million)	ArianeGroup		MBDA		ATR GIE	
	2021	2020	2021	2020	2021	2020
Carrying amount of the investment at 1 January	669	699	498	450	10	106
Share of results from continuing operations	(66)	(22)	130	107	(23)	(68)
Share of other comprehensive income	5	(8)	99	(57)	(4)	5
Dividends received during the year	0	0	(49)	0	76	(33)
Changes in consolidation	5	0	0	0	0	0
Others	(81)	0	(2)	(2)	0	0
Carrying amount of the investment at 31 December	532	669	676	498	59	10

The Company's share of contingent liabilities and other commitments as of 31 December 2021 relating to MBDA is €393 million (2020: €450 million).

9.2 Investments in Associates

The Company's interests in associates, accounted for under the equity method, are stated in aggregate in the following table:

(In € million)	2021	2020
Carrying amount of the investment at 1 January	211	182
Share of results from continuing operations	(33)	8
Share of other comprehensive income	30	32
Dividends received during the year	(6)	(44)
Changes in consolidation	0	28
Disposal of shares	0	5
Others	(1)	0
Carrying amount of the investment at 31 December	201	211

The cumulative unrecognised comprehensive loss for these associates amounts to €-12 million and €-97 million as of 31 December 2021 and 2020, respectively (thereof €85 million for the period).

10. Related Party Transactions

<i>(In € million)</i>	Sales of goods and services and other income	Purchases of goods and services and other expenses	Receivables at 31 December	Liabilities at 31 December	Loans granted / Other receivables due at 31 December	Loans received / Other liabilities due at 31 December
2021						
Total transactions with associates	7	132	3	22	108	0
Total transactions with joint ventures	2,807	212	930	1,239	0	1,410
2020						
Total transactions with associates	9	42	6	13	101	16
Total transactions with joint ventures	2,596	186	1,294	1,176	5	1,275

Transactions with unconsolidated subsidiaries are immaterial to the Company's Consolidated Financial Statements.

As of 31 December 2021, the Company granted guarantees of €129 million to Air Tanker Group in the UK (2020: €129 million).

For information regarding the funding of the Company's pension plans, which are considered as related parties, see "– Note 31: Post-Employment Benefits".

The information relative to compensation and benefits granted to Members of the Executive Committee and Board of Directors are disclosed in "– Note 33: Remuneration".

AIRBUS - FINANCIAL STATEMENTS 2021 - 20

2.3 Segment Information

The Company operates in three reportable segments which reflect the internal organisational and management structure according to the nature of the products and services provided.

- **Airbus** — Development, manufacturing, marketing and sale of commercial jet aircraft of more than 100 seats, aircraft conversion and related services; development, manufacturing, marketing and sale of regional turboprop aircraft and aircraft components. It also includes the holding function of the Company and its bank activities.
- **Airbus Helicopters** — Development, manufacturing, marketing and sale of civil and military helicopters; provision of helicopter related services.
- **Airbus Defence and Space** — Military Aircraft design, development, delivery, and support of military aircraft such as combat, mission, transport and tanker aircraft and their associated services. Space Systems design, development, delivery, and support of full range of civil and defence space systems for telecommunications, earth observations, navigation, science and orbital systems. Connected Intelligence provision of services around data processing from platforms, secure communication and cyber security. In addition, the main joint ventures design, develop, deliver, and support missile systems as well as space launcher systems. Unmanned Aerial Systems design, development, delivery and service support.

On 21 April 2021, the Company presented its plans to create integrated aerostructures assembly companies in both France and Germany, and a third company as a new global player in the detail parts business, anchored in Germany.

The plans have no impact on the segment structure described above (see "– Note 40: Events after the Reporting Date").

11. Segment Information

The following tables present information with respect to the Company's business segments. As a rule, inter-segment transfers are carried out on an arm's length basis. Inter-segment sales predominantly take place between Airbus and Airbus Defence and Space and between Airbus Helicopters and Airbus. Consolidation effects are reported in the column "Eliminations".

The Company uses EBIT as a key indicator of its economic performance.

Business segment information for the year ended 31 December 2021 is as follows:

<i>(In € million)</i>	Airbus	Airbus Helicopters	Airbus Defence and Space	Eliminations	Consolidated Airbus
Total revenue	36,164	6,509	10,186	0	52,859
Internal revenue	(425)	(230)	(55)	0	(710)
Revenue	35,739	6,279	10,131	0	52,149
<i>thereof</i>					
sales of goods at a point in time	33,455	3,298	3,076	0	39,829
sales of goods over time	20	192	3,557	0	3,769
services, including sales of spare parts	2,264	2,789	3,498	0	8,551
Profit before financial result and income taxes (EBIT)	4,175	535	568	64	5,342
<i>thereof</i>					
depreciation and amortisation	(1,616)	(184)	(525)	0	(2,325)
research and development expenses	(2,252)	(275)	(249)	30	(2,746)
share of profit from investments accounted for under the equity method	(29)	0	69	0	40
additions to other provisions ⁽¹⁾	(989)	(398)	(870)	27	(2,230)
Interest result					(246)

Other financial result	(69)
Income taxes	(853)
Profit for the period	4,174

(1) See “– Note 24: Provisions, Contingent Assets and Contingent Liabilities”.

AIRBUS - FINANCIAL STATEMENTS 2021 - 21

Business segment information for the year ended 31 December 2020 is as follows:

<i>(In € million)</i>	Airbus	Airbus Helicopters	Airbus Defence and Space	Eliminations	Consolidated Airbus
Total revenue	34,250	6,251	10,446	0	50,947

AIRBUS - FINANCIAL STATEMENTS 2021 - 22

Segment order backlog	31 December			
	2021		2020	
	(In € million)	(In %)	(In € million)	(In %)
Airbus	345,101	87	324,675	87
Airbus Helicopters	17,985	4	15,782	4
Airbus Defence and Space	36,131	9	33,505	9
Eliminations	(778)	0	(835)	0
Total	398,439	100	373,127	100

As of 31 December 2021, the total backlog represents the aggregate amount of the transaction price allocated to the unsatisfied and partially unsatisfied performance obligations to the Company's customers. Backlog commitments are relative to the Company's enforceable contracts with its customers where it is probable that the consideration will be collected. As a result, contractual rebates, engines concessions, and variable considerations are taken into consideration for measurement. Contracts stipulated in a currency different than the presentation currency are translated to euro using the spot rate as of 31 December 2021 and 2020 respectively. Adjustments to the value of the backlog could result from changes in the transaction price. The backlog will mainly be released into revenue over a period of seven years.

The increase mainly reflects the strengthening of the US dollar. In Airbus, total gross commercial aircraft orders amount to 771 units (2020: 383 units) with net orders of 507 aircraft after cancellations (2020: 268 aircraft) and total deliveries amount to 611 units (2020: 566 units) as of 31 December 2021.

2.4 Airbus Performance

12. Revenue and Gross Margin

Revenue increased by € +2,237 million to €52,149 million (2020: €49,912 million). The increase is mainly driven by Airbus (€+2,178 million) reflecting higher aircraft deliveries partly offset by an unfavourable foreign exchange impact.

Revenue by geographical areas based on the location of the customer is as follows:

(In € million)	2021	2020
Asia-Pacific	15,970	13,087
Europe	19,490	20,325
North America	10,546	8,688
Middle East	2,256	3,123
Latin America	980	983
Other countries	2,907	3,706
Total	52,149	49,912

The **gross margin** increased by € +3,969 million to €9,631 million compared to €5,662 million in 2020. It mainly reflects higher aircraft deliveries at Airbus as well as a release of COVID-related provisions for an amount of € 0.4 billion. In addition, in 2020, Airbus was impacted by lower cost efficiency and recorded charges of € 1.2 billion triggered by the COVID-19 pandemic. The gross margin rate increased from 11.3% to 18.5%.

The Company delivered the last A380 aircraft in 2021. As a consequence and in addition to the net charge recorded in 2018, the Company recorded a net charge of €385 million in EBIT in 2020 as part of its continuous assessment of asset recoverability and review of onerous contract provision assumptions. In 2021, a positive EBIT impact of €274 million was recorded, mainly reflecting the release of provision recorded in 2018 on the former A380 Lagardère facility that will be used for the modernised A320 FAL.

As of 31 December 2021, the Company has delivered a total of 105 A400M aircraft including 8 aircraft in 2021.

The COVID-19 pandemic is weighing on the performance of development, production, flight testing, aircraft delivery and retrofit activities of the programme. The Company has continued with development activities toward achieving the revised capability roadmap. Retrofit activities are progressing in close alignment with the customer.

In 2020, an update of the contract estimate at completion was performed and a charge of €63 million recorded reflecting mainly the variation of price escalation indexes. In 2021, an update of the contract estimate at completion has been performed and an additional charge of €212 million has been recorded. This reflects mainly the updated estimates on the delivery pattern of the launch contract and the associated impact on unabsorbed costs.

Risks remain on the development of technical capabilities and associated costs, on aircraft operational reliability in particular with regard to power plant, on cost reductions and on securing export orders in time as per the revised baseline.

AIRBUS - FINANCIAL STATEMENTS 2021 - 23

Defence export licences to Saudi Arabia were suspended by the German Government until 31 March 2020. A revised Estimate at Completion (EAC) for a customer contract was performed as of 31 December 2020, and the Company continues to engage with its customer to agree a way forward. The outcome of these negotiations is presently unclear but could result in further significant financial impacts. The year-end 2020 assessment remains unchanged as of 31 December 2021.

13. Research and Development Expenses

Research and development expenses decreased by € -112 million to €2,746 million compared to €2,858 million in 2020.

14. Other Income and Other Expenses

Other income increased by € +462 million to €594 million compared to €132 million in 2020. In 2021, it includes the gain of €122 million for the divestment of one of its sites to a joint venture (see "– Note 8: Acquisitions and Disposals").

Other expenses decreased by € -1,257 million to €-201 million compared to €-1,458 million in 2020, mainly due to the restructuring provision recorded in 2020 for an amount of €1.2 billion in response to the COVID-19 pandemic.

15. Share of Profit from Investments Accounted for under

the Equity Method and Other Income from Investments

<i>(In € million)</i>	2021	2020
Share of profit from investments in joint ventures	73	31
Share of profit from investments in associates	(33)	8
Share of profit from investments accounted for under the equity method	40	39
Other income from investments	76	113

Share of profit from investments under the equity method and other income from investments decreased by €-36 million to € 116 million compared to € 152 million in 2020. It includes dividends received from other investments classified at fair value through OCI for an amount of € 108 million (2020: € 137 million).

16. Total Financial Result

Interest income derived from the Company's asset management and lending activities is recognised as interest accrues, using the effective interest rate method.

<i>(In € million)</i>	2021	2020
Interests on European Governments' refundable advances	(112)	(108)
Others	(134)	(163)
Total interest result ⁽¹⁾	(246)	(271)
Change in fair value measurement of financial instruments	(370)	111
Foreign exchange translations on monetary items	53	(28)
Unwinding of discounted provisions	(19)	(25)
Others	267	(407)
Total other financial result	(69)	(349)
Total	(315)	(620)

(1) In 2021, the total interest income amounts to €88 million (2020: € 140 million) for financial assets which are not measured at fair value through profit or loss. For financial liabilities which are not measured at fair value through profit or loss €-334 million (2020: €-411 million) are recognised as total interest expenses. Both amounts are calculated by using the effective interest method.

Total financial result improved by € +305 million to € -315 million compared to € -620 million in 2020. This is driven by the revaluation of certain equity investments (see "– Note 21: Other Investments and Other Long-Term Financial Assets"), compensated by a negative impact from revaluation of financial instruments. In addition, in 2020 it included the re-measurement on the A350 Repayable Launch Investment ("RLI") (see "– Note 25: Other Financial Assets and Other Financial Liabilities").

AIRBUS - FINANCIAL STATEMENTS 2021 - 24

17. Income Taxes

The expense for income taxes is comprised of the following:

<i>(In € million)</i>	2021	2020
Current tax expense	(348)	227
Deferred tax expense	(505)	(266)
Total	(853)	(39)

Main income tax rates and main changes impacting the Company:

<i>(Rate in %)</i>	2021	2022	> 2022
Netherlands ⁽¹⁾	25.00	25.80	25.80
France ⁽²⁾	28.41	25.83	25.83
Germany	30.00	30.00	30.00
Spain	25.00	25.00	25.00
UK ⁽³⁾	19.00	19.00	25.00

(1) A tax law has been enacted in 2021 increasing the rate for income taxes to 25.80% in 2022 and beyond.

(2) In 2019, a tax law has been enacted changing the rate for income taxes to 28.41% in 2021 and 25.83% from 2022 and beyond.

(3) A tax law has been enacted in 2021 increasing the rate for income taxes to 25.00% from April 2023 and beyond.

The following table shows a reconciliation from the theoretical income tax (expense) using the Dutch corporate tax rate to the reported income tax (expense):

<i>(In € million)</i>	2021	2020
Profit (Loss) before income taxes	5,027	(1,130)
Corporate income tax rate	25.0%	25.0%
Expected (expense) for income taxes	(1,257)	283
Effects from tax rate differentials / Change of tax rate	(103)	(4)
Capital gains and losses on disposals / mergers	5	(3)
Income from investment and associates	23	24
Tax credit	53	13
Change in valuation allowances ⁽¹⁾	116	(356)
Tax contingencies	186	147
Other non-deductible expenses and tax-free income	124	(143)
Reported tax (expense)	(853)	(39)

(1) Reassessments of the recoverability of deferred tax assets based on future taxable profits.

The income tax expense amounts to €-853 million (2020: €-39 million) and corresponds to an effective income tax rate of 17.0%. This includes positive impacts from tax risk updates, the tax-free revaluation of certain equity investments under IFRS 9 and a net release of deferred tax asset impairments mainly due to an updated business outlook. Management will continue to assess its tax contingencies going forward, whose outcome could result in further financial impacts.

In 2020, the effective tax rate was mainly driven by the negative pre-tax result offset by deferred tax impairments and tax-free revaluation

of certain equity investments.

As the Company controls the timing of the reversal of temporary differences associated with its subsidiaries (usually referred to as "outside basis differences") arising from yet undistributed profits and changes in foreign exchange rates, it does not recognise a deferred tax liability. For temporary differences arising from investments in associates the Company recognises deferred tax liabilities. The rate used reflects the assumptions that these differences will be recovered from dividend distribution unless a management resolution for the divestment of the investment exists at the closing date. For joint ventures, the Company assesses its ability to control the distribution of dividends based on existing shareholder agreements and recognises deferred tax liabilities accordingly.

As of 31 December 2021, the aggregate amount of temporary differences associated with investments in subsidiaries, branches and associates and interests in joint arrangements, for which deferred tax liabilities have not been recognised, amounts to € 145 million.

Deferred taxes on net operating losses ("NOLs"), trade tax loss carry forwards and tax credit carry forwards are:

(In € million)	France	Germany	Spain	UK	Other countries	31 December 2021	31 December 2020
NOL	372	3,224	338	1,417	2,934	8,285	7,625
Trade tax loss carry forwards	0	3,530	0	0	0	3,530	3,263
Tax credit carry forwards	0	0	216	0	5	221	279
Tax effect	96	1,010	300	354	759	2,519	2,283
Valuation allowances	(13)	(984)	(207)	(85)	(712)	(2,001)	(1,927)
Deferred tax assets on NOLs and tax credit carry forwards	83	26	93	269	47	518	356

AIRBUS - FINANCIAL STATEMENTS 2021 - 25

NOLs, capital losses and trade tax loss carry forwards are indefinitely usable under certain restrictions in France, Germany, the UK and Spain. They are usable for 20 years in Canada. In Spain, R&D tax credit carry forwards will expire after 18 years.

Roll forward of deferred tax:

(In € million)	2021	2020
Net deferred tax assets at 1 January	3,572	4,610
Deferred tax expense in income statement	(505)	(266)
Deferred tax recognised directly in AOCI	1,435	(893)
Deferred tax on remeasurement of the net defined benefit pension plans	(368)	358
Others	73	(237)
Net deferred tax assets at 31 December	4,207	3,572

Details of deferred tax recognised cumulatively in equity are as follows:

(In € million)	2021	2020
Financial assets at fair value through OCI	(102)	(128)
Cash flow hedges	1,323	(86)
Deferred tax on remeasurement of the net defined benefit pension plans	2,126	2,494
Total	3,347	2,280

Deferred income taxes as of 31 December 2021 are related to the following assets and liabilities:

(In € million)	1 January 2021		Other movements		Movement through income statement		31 December 2021	
	Deferred tax assets	Deferred tax liabilities	OCI / IAS 19	Others ⁽¹⁾	R&D tax credits	Deferred tax benefit (expense)	Deferred tax assets	Deferred tax liabilities

(1) "Others" mainly comprises changes in the consolidation scope and foreign exchange rate effects.

18. Earnings per Share

	2021	2020
Profit (Loss) for the period attributable to equity owners of the parent (Net income)	€ 4,213 million	€ (1,133) million
Weighted average number of ordinary shares	785,326,074	783,178,191
Basic earnings per share	€ 5.36	€ (1.45)

Diluted earnings per share – The Company's dilutive potential ordinary shares are share-settled Performance Units relating to Long-Term Incentive Plans ("LTIP").

During 2021, the average price of the Company's shares exceeded the exercise price of the share-settled Performance Units and therefore 575,926 shares were considered in the calculation of diluted earnings per share.

As there was a loss in 2020, the effect of potentially dilutive ordinary shares was anti-dilutive.

	2021	2020
Profit (Loss) for the period attributable to equity owners of the parent (Net income), adjusted for diluted calculation	€ 4,213 million	€ (1,133) million
Weighted average number of ordinary shares (diluted) ⁽¹⁾	785,902,000	783,178,191
Diluted earnings per share	€ 5.36	€ (1.45)

(1) In 2021, dilution assumes conversion of all potential ordinary shares.

2.5 Operational Assets and Liabilities

19. Intangible Assets

Intangible assets comprise (i) goodwill (see "– Note 7: Scope of Consolidation"), (ii) capitalised development costs (see "– Note 3: Significant Accounting Policies") and (iii) other intangible assets, e.g. internally developed software and acquired intangible assets.

Intangible assets with finite useful lives are generally amortised on a straight-line basis over their respective estimated useful lives (three to ten years) to their estimated residual values.

31 December 2021 and 2020 comprise the following:

(In € million)	31 December 2021			31 December 2020		
	Gross amount	Amortisation / Impairment	Net book value	Gross amount	Amortisation / Impairment	Net book value
Goodwill	14,072	(1,044)	13,028	14,039	(1,040)	12,999
Capitalised development costs	2,534	(1,248)	1,286	3,210	(1,952)	1,258
Other intangible assets	5,043	(2,990)	2,053	4,807	(2,865)	1,942
Total	21,649	(5,282)	16,367	22,056	(5,857)	16,199

Net Book Value

(In € million)	Balance at	Exchange differences	Additions	Changes in			Amortisation / Impairment	Balance at
	1 January 2021			consolidation scope	Reclassification	Disposals		
Goodwill	12,999	28	1	0	0	0	0	13,028
Capitalised development costs	1,258	12	152	0	(14)	(16)	(106)	1,286
Other intangible assets	1,942	113	199	(1)	16	(5)	(211)	2,053
Total	16,199	153	352	(1)	2	(21)	(317)	16,367

(In € million)	Balance at	Exchange differences	Additions	Changes in			Amortisation / Impairment	Balance at
	1 January 2020			consolidation scope	Reclassification	Disposals		
Goodwill	13,019	(30)	10	0	0	0	0	12,999
Capitalised development costs	1,460	(9)	101	0	0	(72)	(222)	1,258
Other intangible assets	2,112	(128)	199	1	(13)	3	(232)	1,942
Total	16,591	(167)	310	1	(13)	(69)	(454)	16,199

Intangible assets increased by €+168 million to €16,367 million (2020: €16,199 million). Intangible assets mainly relate to goodwill of €13,028 million (2020: €12,999 million).

Capitalised Development Costs

The Company has capitalised development costs in the amount of €1,286 million as of 31 December 2021 (€1,258 million as of 31 December 2020), mainly for Airbus programmes (€676 million), Airbus Helicopters (€340 million) and Airbus Defence and Space (€271 million). Based on management's best estimate, there is no impact on the useful life of capitalised development costs resulting from the Company's journey towards sustainable aerospace.

Impairment Tests

Each year the Company assesses whether there is an indication that a non-financial asset or a cash generating unit ("CGU") to which the asset belongs may be impaired. In addition, intangible assets with an indefinite useful life, intangible assets not yet available for use and goodwill are tested for impairment annually, irrespective of whether there is any indication for impairment. An impairment loss is recognised in the amount by which the asset's carrying amount exceeds its recoverable amount. For the purpose of impairment testing, any goodwill is allocated to the CGU or group of CGUs in a way that reflects the way goodwill is monitored for internal management purposes.

AIRBUS - FINANCIAL STATEMENTS 2021 - 28

The discounted cash flow method is used to determine the recoverable amount of a CGU or the group of CGUs to which goodwill is allocated. The discounted cash flow method is particularly sensitive to the selected discount rates and estimates of future cash flows by management. Discount rates are based on the weighted average cost of capital ("WACC") for the groups of cash-generating units. The discount rates are calculated based on a risk-free rate of interest and a market risk premium. In addition, the discount rates reflect the current market assessment of the risks specific to each group of CGUs by taking into account specific peer group information on beta factors, leverage and cost of debt. Consequently, slight changes to these elements can materially affect the resulting valuation and therefore the amount of a potential impairment charge.

These estimates are influenced by several assumptions including the growth rate of CGUs where a rate of 1% has been applied, the increase of deliveries in the coming years, the availability and composition of future defence and institutional budgets, and foreign exchange fluctuations or implications arising from the volatility of capital markets. Cash flow projections take into account past experience and represent management's best estimate of future developments.

The Company tested the intangible assets for which an indicator of impairment was identified. In particular, the Company tested the intangible assets associated with some aircraft programmes and concluded that no impairment was necessary.

As of 31 December 2021 and 2020, goodwill was allocated to CGUs or group of CGUs and is summarised in the following schedule:

(In € million)	Airbus	Airbus Helicopters	Airbus Defence and Space	Eliminations	Consolidated Airbus
	Goodwill as of 31 December 2021	10,731	139	2,158	0
Goodwill as of 31 December 2020	10,710	139	2,150	0	12,999

The goodwill mainly relates to the creation of the Company in 2000 and the Airbus Combination in 2001.

The annual impairment tests performed in 2021 led to no impairment charge. Sensitivities were also performed for growth rates (+ / - 1%) and discount rates (+ / - 1%), and in both cases led to no impairment charge.

General Assumptions Applied in the Planning Process

The basis for determining the recoverable amount is the value in use of the CGUs. Generally, cash flow projections used for the Company's impairment testing are based on operative planning.

The operative planning, used for the impairment test, is based on the following key assumptions which are relevant for all CGUs:

- increase of expected future labour expenses of 3.0% (2020: 1.5%);
- future interest rates projected per geographical market, for the European Monetary Union, the UK and the US;
- future exchange rate of 1.25 US\$/€ (2020: 1.25 US\$/€) to convert in euro the portion of future US dollar which is not hedged (see "– Note 37: Financial Instruments");

General economic data derived from external macroeconomic and financial studies have been used to derive the general key assumptions.

In addition to these general planning assumptions, the following additional CGU specific assumptions, which represent management's current best assessment as of the date of these Consolidated Financial Statements, have been applied in individual CGUs:

Airbus

- The planning takes into account both the current market condition and Airbus production rate, and includes management's best estimates of the progressive increase in aircraft deliveries over the operative planning period.
- In the absence of long-term financial reference, expected cash flows generated beyond the planning horizon are considered through a terminal value.
- The carrying value and planned cash flows of the CGU Airbus are materially influenced due to the significant hedge portfolio.
- Cash flows are discounted using a euro weighted pre-tax WACC of 11.0% (2020: 14.1%).

Airbus Helicopters

- The planning takes into account the evolution of programmes based upon the current backlog and an assessment of order intake for platforms and services.
- In the absence of long-term financial reference, expected cash flows generated beyond the planning horizon are considered through a terminal value.
- Long-term commercial assumptions in respect of market share, deliveries and market value are based on the latest helicopter market forecast. This market has started to recover in 2021, but is expected to remain a challenging environment due to persistent economic uncertainties lengthening the sales cycle in particular in military due to budget allocation postponement or reduction, delayed growth of emerging markets especially in Asia, and the Oil and Gas downturn.
- Cash flows are discounted using a euro weighted pre-tax WACC of 9.3% (2020: 12.8%).

AIRBUS - FINANCIAL STATEMENTS 2021 - 29

Airbus Defence and Space

- Overall the defence and space markets are expected to have a moderate growth during the period of the operative planning horizon.
- Business growth is underpinned by growing defence opportunities. Underlying performance is improved by focusing on project delivery, cost control and efficiency.
- In the absence of long-term financial reference, expected cash flows generated beyond the planning horizon are considered through a terminal value.
- Cash flows are discounted using a euro weighted pre-tax WACC of 8.3% (2020: 10.1%).

20. Property, Plant and Equipment

Property, plant and equipment is valued at acquisition or manufacturing costs less accumulated depreciation and impairment losses. Items of property, plant and equipment are generally depreciated on a straight-line basis. The following useful lives are assumed:

Buildings	10 to 50 years
Site improvements	6 to 30 years
Technical equipment and machinery	2 to 20 years
Jigs and tools ⁽¹⁾	5 years
Other equipment, factory and office equipment	2 to 10 years

(1) If more appropriate, jigs and tools are depreciated using the number of production or similar units expected to be obtained from the tools (sum-of-the-units method).

Property, plant and equipment as of 31 December 2021 and 2020 comprises the following:

	31 December 2021			31 December 2020		
	Gross amount	Depreciation / Impairment	Net book value	Gross amount	Depreciation / Impairment	Net book value
<i>(In € million)</i>						
Land, leasehold improvements and buildings, including buildings on land owned by others	10,344	(5,324)	5,020	9,767	(5,086)	4,681
Technical equipment and machinery	23,697	(16,609)	7,088	23,650	(16,582)	7,068
Other equipment, factory and office equipment ⁽¹⁾	3,853	(3,013)	840	3,699	(2,888)	811
Construction in progress	1,890	0	1,890	2,310	0	2,310
Right-of-use assets ⁽²⁾	2,486	(788)	1,698	2,426	(622)	1,804
Total	42,270	(25,734)	16,536	41,852	(25,178)	16,674

(1) Includes the net book value of aircraft under operating lease (see "– Note 27: Sales Financing Transactions").

(2) The net book value of Land and Buildings under Right-of-use assets amounts to € 1,583 million.

Net Book Value

								Balance at
	Balance at 1 January 2021	Exchange differences	Additions	Changes in consolidation scope	Reclassification	Disposals	Depreciation / Impairment	31 December 2021
<i>(In € million)</i>								
Land, leasehold improvements and buildings, including buildings on land owned by others	4,681	43	48	5	641	(71)	(327)	5,020
Technical equipment and machinery	7,068	106	225	1	1,038	(66)	(1,284)	7,088
Other equipment, factory and office equipment	811	14	150	2	66	(7)	(196)	840
Construction in progress	2,310	16	1,289	2	(1,678)	(49)	0	1,890

Right-of-use assets	1,894	58	1,349	18	(26)	(142)	(2,069)	16,536
Total	16,674	238	1,952	18	(26)	(142)	(2,069)	16,536

AIRBUS - FINANCIAL STATEMENTS 2021 - 30

(In € million)	Balance at 1 January 2020	Exchange differences	Additions	Changes in consolidation scope	Reclassification	Disposals	Depreciation / Impairment ⁽¹⁾	Balance at 31 December 2020
Land, leasehold improvements and buildings, including buildings on land owned by others	4,823	(37)	104	(7)	168	(44)	(326)	4,681
Technical equipment and machinery	7,257	(127)	328	(3)	1,158	(36)	(1,509)	7,068
Other equipment, factory and office equipment	957	(13)	83	0	79	(73)	(222)	811
Construction in progress	2,714	(11)	1,008	2	(1,364)	(39)	0	2,310
Right-of-use assets	1,543	(57)	605	15	(23)	(33)	(246)	1,804
Total	17,294	(245)	2,128	7	18	(225)	(2,303)	16,674

(1) Accelerated depreciation previously included in onerous contract provision has been offset with the release of the provision in the presentation of the Consolidated Statement of Cash Flows for the year ended 2020.

Property, plant and equipment decreased by € 138 million to € 16,536 million (2020: € 16,674 million). Property, plant and equipment include right-of-use assets for an amount of € 1,698 million as of 31 December 2021 (2020: € 1,804 million).

Based on management's best estimate, there is no impact on the useful life of Property, plant and equipment resulting from the Company's journey towards sustainable aerospace.

For details on assets related to lease arrangements on sales financing, see "– Note 27: Sales Financing Transactions".

Property, Plant and Equipment by Geographical Areas

(In € million)	31 December	
	2021	2020
France	7,570	7,736
Germany	4,185	4,350
UK	1,604	1,615
Spain	1,273	1,350
Other countries	1,904	1,623
Total	16,536	16,674

The Company as lessee

The Company leases mainly real estate assets, cars and equipment (such as land, warehouses, storage facilities and offices).

Short-term leases and leases of low-value assets refer mainly to IT equipment (e.g. printers, laptops and mobile phones) and other equipment.

The Company incurred interest expense on lease liabilities of € 22 million. The expense in relation to short-term and low-value assets is insignificant.

There are no significant variable lease payments included in the Company's lease arrangements.

The discount rate used to determine the right-of-use asset and the lease liability for each country and leased asset is calculated based on the incremental borrowing rate at inception of the lease. The Company calculated the rate applicable to each lease contract on the basis of the lease duration.

The maturity analysis of lease liabilities, based on contractual undiscounted cash flows is shown in "Note 37.1 – Financial Risk Management".

Real estate leases

The Company leases land and buildings mainly for its operational business warehouses including logistic facilities, offices, production halls and laboratories. The major leases are located in France, Germany, the US, Canada and China. As lease contracts are negotiated on an individual basis, lease terms contain a wide range of different terms and conditions. Leases are typically made for a fixed period of 3-25 years and may include extension, termination and other options, which provide operational flexibility to the Company.

Vehicle leases

The Company leases cars for management and other functions. Vehicle leases typically run for an average period of three years and do not provide renewal options.

AIRBUS - FINANCIAL STATEMENTS 2021 - 31

Other leases

The Company also leases IT equipment, machinery and other equipment that combined are insignificant to the total leased asset portfolio.

Off-Balance Sheet Commitments

Commitments related to property, plant and equipment comprise contractual commitments for future capital expenditures and

contractual commitments for purchases of "Land, leasehold improvements and buildings including buildings on land owned by others" (€ 598 million as of 31 December 2021, 2020: € 335 million).

21. Other Investments and Other Long-Term Financial Assets

(In € million)	31 December	
	2021	2020
Other investments	2,511	2,245
Other long-term financial assets	1,490	1,610
Total non-current other investments and other long-term financial assets	4,001	3,855
Current portion of other long-term financial assets	537	468
Total	4,538	4,323

Other investments mainly comprise the Company's participations and include the remaining investment in Dassault Aviation (9.90%, 2020: 9.90%) amounting to € 786 million at 31 December 2021 (2020: € 742 million).

In March 2020, **OneWeb Communications** filed under Chapter 11 of the US Bankruptcy Code. Consequently, the related financial assets were fully impaired, leading to a decrease in the fair value of the equity investment by € -137 million recorded through OCI and a depreciation of a loan by € -136 million recorded through financial result.

In November 2020, the US Bankruptcy Court entered an order issuing a final decree to allow a consortium of Her Majesty's Government HMG and Bharti Global Limited to acquire the newly re-organised OneWeb.

As at 31 December 2021, the Company holds a minor investment in OneWeb which is accounted for at fair value.

Other long-term financial assets and the **current portion of other long-term financial assets** include other loans in the amount of € 1,909 million as of 31 December 2021 (2020: € 1,841 million), and the sales financing activities in the form of finance lease receivables and loans from aircraft financing.

22. Contract Assets and Contract Liabilities, Trade Receivables and Trade Liabilities

Contract assets represent the Company's right to consideration in exchange for goods or services that the Company has transferred to a customer when that right is conditioned by something other than the passage of time (e.g. revenue recognised from the application of the PoC method before the Company has a right to invoice).

Contract liabilities represent the Company's obligation to transfer goods or services to a customer for which the Company has received consideration, or for which an amount of consideration is due from the customer (e.g. advance payments received).

Net contract assets and contract liabilities are determined for each contract separately. For serial contracts, contract liabilities are presented in current contract liabilities, if revenues are expected within the next twelve months or material expenses for the manufacturing process have already occurred. For long-term production contracts (e.g. governmental contracts such as A400M, Tiger, NH90), contract liabilities are classified as current when the relating inventories or receivables are expected to be recognised within the normal operating cycle of the long-term contract.

Trade receivables arise when the Company provides goods or services directly to a customer with no intention of trading the receivable. Trade receivables include claims arising from revenue recognition that are not yet settled by the debtor. Trade receivables are initially recognised at their transaction prices and are subsequently measured at amortised cost less any allowances for impairment. Gains and losses are recognised in the Consolidated Income Statement when the receivables are derecognised, impaired or amortised.

Impairment and allowances of trade receivables and contract assets are measured at an amount equal to the life-time expected loss as described in "– Note 37: Financial Instruments".

AIRBUS - FINANCIAL STATEMENTS 2021 - 32

Contract Assets, Contract Liabilities and Trade Receivables

Significant changes in contract assets and contract liabilities during the period are as follows:

(In € million)	2021		2020	
	Contract assets	Contract liabilities	Contract assets	Contract liabilities
Revenue recognised that was included in the contract liability balance at 1 January	-	(19,311)	-	(20,327)
Increases due to cash received, excluding amounts recognised as revenue ⁽¹⁾	-	17,792	-	20,915
Transfers from contract assets recognised at 1 January	(5,765)	-	(4,353)	-
Increase as a result of changes in the measure of progress	6,045	-	4,188	-

(1) Including final payments received from customers and others parties in anticipation.

As of 31 December 2021, trade receivables amounting to € 210 million (2020: € 189 million) will mature after more than one year.

The respective movement in the allowance for doubtful accounts in respect of trade receivables and contract assets during the period was as follows:

(In € million)	2021	2020
Allowance balance at 1 January	(306)	(397)
Utilisations / disposals and business combinations	47	162
Additions	(104)	(71)
Allowance balance at 31 December	(363)	(306)

Trade Liabilities

Trade liabilities of € 9,693 million (2020: € 8,722 million) increased by € +971 million, mainly in Airbus.

As of 31 December 2021, trade liabilities amounting to €89 million (2020: €67 million) will mature after more than one year.

23. Inventories

(In € million)	31 December 2021			31 December 2020		
	Gross amount	Write-down	Net book value	Gross amount	Write-down	Net book value
Raw materials and manufacturing supplies	3,773	(705)	3,068	3,934	(606)	3,328
Work in progress	19,553	(2,010)	17,542	21,225	(2,495)	18,730
Finished goods and parts for resale	5,356	(800)	4,556	5,919	(691)	5,228
Advance payments to suppliers	3,491	(119)	3,372	3,173	(58)	3,115
Total	32,173	(3,634)	28,538	34,251	(3,850)	30,401

Inventories of €28,538 million (2020: €30,401 million) decreased by €-1,863 million. This is driven by Airbus (€-1,944 million), and mainly reflects the delivery of the last A380 aircraft and the reduction in the widebodies inventory.

In 2021, write-downs of inventories in the amount of €-655 million (2020: €-950 million) are recognised in cost of sales, whereas reversal of write-downs amounts to €459 million (2020: €24 million). At 31 December 2021, €16,564 million of work in progress and €4,428 million of finished goods and parts for resale were carried at net realisable value.

Inventories recognised as an expense during the period amount to €32,388 million (2020: €32,985 million).

AIRBUS - FINANCIAL STATEMENTS 2021 - 33

24. Provisions, Contingent Assets and Contingent Liabilities

Provisions — The determination of provisions, e.g. for onerous contracts, program-related provisions, warranty costs, restructuring measures and legal proceedings is based on best estimates.

In general, in the aerospace sector, the contractual and technical parameters considered for provision calculations are complex. Hence uncertainty exists with regard to the timing and amounts of expenses to be taken into account.

(In € million)	31 December	
	2021	2020
Provisions for pensions	7,072	9,980
Other provisions	8,209	10,563
Total	15,281	20,543
thereof non-current portion	10,771	14,298 ⁽¹⁾
thereof current portion	4,510	6,245 ⁽¹⁾

(1) Previous year allocation between non-current and current provisions has been restated.

As of 31 December 2021, **provisions for pensions** decreased mainly due to the change in financial assumptions of €1,453 million reflecting the further strengthening of interest rates and increased inflation assumptions in Germany, France, Canada and the UK and the increase in plan assets of €1,341 million.

Other provisions decreased mainly due to the restructuring provision recorded in 2020 in response to the COVID-19 pandemic and a decrease in provisions for onerous contracts due to the delivery of the last A380 aircraft, the utilisation and net presentation of the A400M programme losses against inventories and the reduction in the A220 programme.

Movements in other provisions during the year were as follows:

(In € million)	Balance at 1 January 2021	Exchange differences	Increase from passage of time	Additions	Reclassification/ Change in consolidated group			Balance at 31 December 2021
					Used	Released		
Onerous contracts	3,026	87	0	371	(271)	(782)	(182)	2,249
Outstanding costs	1,320	4	0	456	0	(345)	(59)	1,376
Aircraft financing risks ⁽¹⁾	7	1	0	13	0	(2)	(2)	17
Obligation from services and maintenance agreements	553	0	9	16	0	(33)	(54)	491
Warranties	325	6	(1)	115	1	(58)	(16)	372
Personnel-related provisions ⁽²⁾	1,905	3	1	394	(264)	(1,023)	(247)	769
Litigation and claims ⁽³⁾	894	1	0	74	(5)	(86)	(150)	728
Asset retirement	185	2	2	4	(1)	0	(41)	151
Other risks and charges	2,348	5	0	787	4	(481)	(607)	2,056
Total	10,563	109	11	2,230	(536)	(2,810)	(1,358)	8,209

(1) See “– Note 27: Sales Financing Transactions”.

(2) See “– Note 30: Personnel-Related Provisions”.

(3) See “– Note 38: Litigation and Claims”.

Provisions for onerous contracts in 2021 mainly include the delivery of the last A380 aircraft, the utilisation and net presentation of the A400M programme losses against inventories and the reduction in the A220 programme.

Personnel-related provisions include restructuring provisions and other personnel charges. For more details, see “– Note 30: Personnel-Related Provisions”.

Contingent assets and contingent liabilities — The Company is exposed to technical and commercial contingent obligations due to

the nature of its businesses. To mitigate this exposure, the Company has subscribed a Global Aviation Insurance Programme ("GAP"). Information required under IAS 37 "Provisions, Contingent Assets and Contingent Liabilities" is not disclosed if the Company concludes that disclosure can be expected to prejudice seriously its position in a dispute with other parties.

For other contingent liabilities, see "– Note 38: Litigation and Claims" and "– Note 12: Revenue and Gross Margin" (mainly A400M programme).

Other commitments include contractual guarantees and performance bonds to certain customers as well as commitments for future capital expenditures and amounts which may be payable to commercial intermediaries if future sales materialise.

AIRBUS - FINANCIAL STATEMENTS 2021 - 34

25. Other Financial Assets and Other Financial Liabilities

Other Financial Assets

(In € million)	31 December	
	2021	2020
Positive fair values of derivative financial instruments ⁽¹⁾	664	3,451
Others	27	32
Total non-current other financial assets	691	3,483
Receivables from related companies	803	1,158
Positive fair values of derivative financial instruments ⁽¹⁾	341	973
Others	307	301
Total current other financial assets	1,451	2,432
Total	2,142	5,915

(1) See "– Note 37: Financial Instruments".

Other Financial Liabilities

(In € million)	31 December	
	2021	2020
Liabilities for derivative financial instruments ⁽¹⁾	2,640	1,834
European Governments' refundable advances ⁽²⁾	3,730	3,712
Others	192	111
Total non-current other financial liabilities	6,562	5,657
Liabilities for derivative financial instruments ⁽¹⁾	1,923	983
European Governments' refundable advances ⁽²⁾	131	200
Liabilities to related companies	180	130
Others	298	456
Total current other financial liabilities	2,532	1,769
Total	9,094	7,426
<i>thereof other financial liabilities due within 1 year</i>	<i>2,532</i>	<i>1,769</i>

(1) See "– Note 37: Financial Instruments".

(2) Refundable advances from European Governments are provided to the Company to finance research and development activities for certain projects on a risk-sharing basis, i.e. they are repaid to the European Governments subject to the success of the project.

The total net fair value of derivative financial instruments decreased by € -5,165 million to € -3,558 million (2020: € 1,607 million) as a result of the strengthened US dollar versus the euro associated with the mark to market valuation of the hedge portfolio.

In 2021, the European Governments' refundable advances decreased by € -51 million to € 3,861 million (2020: € 3,912 million).

In 2020, the Company signed amendments to the French and Spanish A350 RLI contracts, leading to a re-measurement of the A350 RLI for an additional net amount of € 236 million in the third quarter, using an equivalent estimated market rate at the date of the amendments.

The allocation of European Governments' refundable advances between non-current and current presented in the Consolidated Financial Statements ended 31 December 2021 is based on the applicable contractual repayment dates.

AIRBUS - FINANCIAL STATEMENTS 2021 - 35

26. Other Assets and Other Liabilities

Other Assets

(In € million)	31 December	
	2021	2020
Cost to fulfil a contract	301	282

Total	4,115	3,596
<i>thereof other liabilities due within 1 year</i>	<i>3,532</i>	<i>3,160</i>

27. Sales Financing Transactions

Sales financing — With a view to facilitating aircraft sales for Airbus and Airbus Helicopters, the Company may enter into either on-balance sheet or off-balance sheet sales financing transactions.

On-balance sheet transactions where the Company is lessor are classified as operating leases, finance leases and loans, inventories and to a minor extent, equity investments:

- (i) operating leases – Aircraft leased out under operating leases are included in property, plant and equipment at cost less accumulated depreciation (see “– Note 20: Property, Plant and Equipment”). Rental income from operating leases is recorded as revenue on a straight-line basis over the term of the lease;
- (ii) finance leases and loans – When, pursuant to a financing transaction, substantially all the risks and rewards of ownership of the financed aircraft reside with a third party, the transaction is characterised as either a finance lease or a loan. In such instances, revenue from the sale of the aircraft are recorded upon delivery, while financial interest is recorded over time as financial income. The outstanding balance of principal is recorded on the Statement of Financial Position (on-balance sheet) in long-term financial assets, net of any accumulated impairments;
- (iii) inventories – Second hand aircraft acquired as part of a commercial buyback transaction, returned to Airbus after a payment default or at the end of a lease agreement are classified as inventories held for resale if there is no subsequent lease agreement in force (see “– Note 23: Inventories”).

Off-balance sheet commitments — Financing commitments are provided to the customer either as backstop commitments before delivery, asset value guarantees at delivery or counter guarantees:

- (i) backstop commitments are guarantees by Airbus, made when a customer-order is placed, to provide financing to the customer in the event that the customer fails to secure sufficient funding when payment becomes due under the order. Such commitments are not considered to be part of Gross Customer Financing Exposure as (i) the financing is not in place, (ii) commitments may be transferred in full or part to third parties prior to delivery, (iii) past experience suggests it is unlikely that all such proposed financings actually will be implemented and, (iv) Airbus retains the asset until the aircraft is delivered and does not incur an unusual risk in relation thereto. In order to mitigate customer credit risks for Airbus, such commitments typically contain financial conditions, such as condition precedents, which guaranteed parties must satisfy in order to benefit therefrom;

AIRBUS - FINANCIAL STATEMENTS 2021 - 36

- (ii) asset value guarantees are guarantees whereby Airbus guarantees a portion of the value of an aircraft at a specific date after its delivery. Airbus considers the financial risks associated with such guarantees to be acceptable, because (i) the guarantee only covers a tranche of the estimated future value of the aircraft, and its level is considered prudent in comparison to the estimated future value of each aircraft, and (ii) the exercise dates of outstanding asset value guarantees are distributed through 2031.

As of 31 December 2021, the nominal value of asset value guarantees considered as variable considerations under IFRS 15 provided to beneficiaries amounts to €381 million (2020: €461 million), excluding €9 million (2020: €8 million) where the risk is considered to be remote. The present value of the risk inherent in asset value guarantees where a settlement is being considered probable is fully provided for and included in the total of contract liabilities for an amount of €345 million (2020: €403 million) (see “– Note 22: Contract Assets, Contract Liabilities and Trade Receivables, and Trade Liabilities”).

Exposure — In terms of risk management, the Company manages its gross exposure arising from its sales financing activities (“Gross Customer Financing Exposure”) separately for (i) customer’s credit risk and (ii) asset value risk.

Gross Customer Financing Exposure is the sum of (i) the book value of operating leases before impairment, (ii) the outstanding principal amount of finance leases or loans due before impairment, (iii) the guaranteed amounts under financial guarantees (iv) the book value of second hand aircraft for resale before impairment, and (v) the outstanding value of any other investment in sales financing structured entities before impairment. This Gross Customer Financing Exposure may differ from the value of related assets on the Company’s Statement of Financial Position and related off-balance sheet contingent commitments, mainly because (i) assets are recorded in compliance with IFRS, but may relate to transactions that are financed on a limited recourse basis and (ii) the carrying amount of the assets on the Consolidated Statement of Financial Position may have been adjusted for impairment losses.

Gross Customer Financing Exposure amounts to US\$0.5 billion (€0.4 billion) (2020: US\$0.6 billion (€0.5 billion)).

Net exposure is the difference between Gross Customer Financing Exposure and the collateral value. Collateral value is assessed using a dynamic model based on the net present value of expected future receivables, expected proceeds from resale and potential cost of default. This valuation model yields results that are typically lower than residual value estimates by independent sources in order to fund for what management believes is its conservative assessment of market conditions and for repossession and transformation costs. The net exposure is provided for by way of impairment losses and other provisions.

Impairment losses and provisions — For the purpose of measuring an impairment loss, each transaction is tested individually. Impairment losses relating to aircraft under operating lease and second hand aircraft for resale (included in inventory) are recognised for any excess of the aircraft's carrying amount over the higher of the aircraft's value in use and its fair value less cost to sell. Finance leases and loans are measured at fair value, based on the present value of estimated future cash flows (including cash flows expected to be derived from a sale of the aircraft). Under its provisioning policy for sales financing risk, Airbus and Airbus Helicopters record provisions as liabilities for estimated risk relating to off-balance sheet commitments.

Security — Sales financing transactions, including those that are structured through structured entities, are generally collateralised by the underlying aircraft. Additionally, the Company benefits from protective covenants and from security packages tailored according to the perceived risk and the legal environment.

The Company endeavours to limit its sales financing exposure by sharing its risk with third parties usually involving the creation of a structured entity. Apart from investor interest protection, interposing a structured entity offers advantages such as flexibility, bankruptcy remoteness, liability containment and facilitating sell-downs of the aircraft financed. An aircraft financing structured entity is typically funded on a non-recourse basis by a senior lender and one or more providers of subordinated financing. When the Company acts as a lender to such structured entities, it may take the role of the senior lender or the provider of subordinated loan. The Company consolidates an aircraft financing structured entity if it is exposed to the structured entity's variable returns and has the ability to direct the relevant remarketing activities. Otherwise, it recognises only its loan to the structured entity under other long-term financial assets. At 31 December 2021 the carrying amount of its loans from aircraft financing amounts to € 77 million (2020: € 224 million). This amount also represents the Company's maximum exposure to loss from its interest in unconsolidated aircraft financing structured entities.

On-Balance Sheet Operating and Finance Leases

The **future minimum operating lease payments** (undiscounted) **due from customers** to be included in revenue, and the **future minimum lease payments** (undiscounted) **from investments in finance leases** to be received in settlement of the outstanding receivable at 31 December 2021 and 31 December 2020 are as follows:

<i>(In € million)</i>	Aircraft under operating lease	Finance lease receivables
Not later than one year	3	5
Later than one year and not later than five years	43	36
Later than five years	80	24
31 December 2021	126	65

<i>(In € million)</i>	Aircraft under operating lease	Finance lease receivables
Not later than one year	6	1
Later than one year and not later than five years	19	12
Later than five years	0	0
31 December 2020	25	13

AIRBUS - FINANCIAL STATEMENTS 2021 - 37

Customer Financing Cash Flows

Direct customer financing cash flows amount to €28 million in 2021 (2020: € 124 million).

Customer Financing Exposure

The on-balance sheet assets relating to sales financing, the off-balance sheet commitments and the related financing exposure (not including asset value guarantees) as of 31 December 2021 and 2020 are as follows:

<i>(In € million)</i>	31 December 2021			31 December 2020		
	Airbus	Helicopters	Total	Airbus	Helicopters	Total

Total	13,269	12,548

(1) See "– Note 31: Post-Employment Benefits".

AIRBUS - FINANCIAL STATEMENTS 2021 - 38

30. Personnel-Related Provisions

Several German companies provide life-time working account models, being employee benefit plans with a promised return on contributions or notional contributions that qualify as **other long-term employee benefits** under IAS 19. The employees' periodical contributions into their life-time working accounts result in corresponding personnel expenses in that period, recognised in **other personnel charges**.

The decrease in **Restructuring measures/ pre-retirement part-time work** is mainly due to the restructuring provision recorded in 2020 in response to the COVID-19 pandemic.

(In € million)	Balance at 1 January 2021	Exchange differences	Increase from passage of time	Additions	Reclassification / Change in consolidated group	Used	Released	Balance at 31 December 2021
Restructuring measures / pre-retirement part-time work	1,263	2	0	52	(259)	(712)	(221)	125
Other personnel charges	642	1	1	342	(5)	(311)	(26)	644
Total	1,905	3	1	394	(264)	(1,023)	(247)	769

In September 2020, a restructuring provision was recognised in response to the COVID-19 pandemic under other provisions for an amount of € 1.2 billion including mainly the cost of voluntary and compulsory measures taking into account management's best estimate of the impact of the working time adaptation and government support measures.

As of 31 December 2021 and 31 December 2020, the restructuring provision in response to the COVID-19 pandemic amounted to € 0.1 billion and € 1.0 billion respectively. It reflects the utilisation of the restructuring provision for an amount of € 0.6 billion, the release of € 0.2 billion and € 0.2 billion reclassified to liabilities to reflect the progress of the plan.

31. Post-Employment Benefits

(In € million)	31 December	
	2021	2020
Provisions for retirement plans	6,240	8,790
Provisions for deferred compensation	832	1,190
Retirement plans and similar obligations	7,072	9,980

Plans description

When Company employees retire, they receive indemnities as stipulated in retirement agreements, in accordance with regulations and practices of the countries in which it operates.

Provision for deferred compensation represents obligations that arise if employees elect to convert part of their remuneration or bonus into an equivalent commitment for deferred compensation which is treated as a defined benefit post-employment plan.

France — The French pension system is operated on a "pay as you go" basis. Besides the basic pension from the French social security system, each employee is entitled to receive a complementary pension from defined contribution schemes AGIRC-ARRCO (*Association pour le régime de retraite complémentaire des salariés* and *Association générale des institutions de retraite des cadres*). Moreover, French law stipulates that employees are paid retirement indemnities in the form of lump sums on the basis of the length of service, which are considered as defined benefit obligations.

Germany — The Company has a pension plan (P3) for executive and non-executive employees in place. Under this plan, the employer provides contributions for the services rendered by the employees, which are dependent on their salaries in the respective service period. These contributions are converted into components which become part of the accrued pension liability at the end of the year. Total benefits are calculated as a career average over the entire period of service. Certain employees that are not covered by this plan receive retirement indemnities based on salary earned in the last year or on an average of the last three years of employment. For some executive employees, benefits are dependent on the final salary of the respective individual at the date of retirement and the time period served as an executive.

AIRBUS - FINANCIAL STATEMENTS 2021 - 39

In 2018, Airbus introduced the new Airbus Pensions Plan ("APP") with security-linked benefits in Germany, which all new entrants after 1 January 2018 will join. Accordingly, the existing pension plan has been closed for new entrants. As of 1 January 2019, deferred compensation, which is financed by the employees, is offered exclusively in APP for all employees. In 2020 the Company transferred about half of the active population of the P3 plan into APP. With effect as of 1 January 2020 these employees will accrue future benefits under APP but not in P3 anymore. Benefits related to past service are not affected by this transfer.

Parts of the pension obligation in Germany are funded by assets invested in specific funding vehicles. Besides a relief fund ("*Unterstützungskasse*"), the Company has implemented a Contractual Trust Arrangement. The Contractual Trust Arrangement structure is that of a bilateral trust arrangement. Assets that are transferred to the relief fund and the Contractual Trust Arrangement qualify as plan assets under IAS 19.

In the trust arrangements between the trust and the participating companies a minimum funding requirement is stipulated for the portion of the obligation for deferred compensation, which is not protected by the pension guarantee association or Pensions-Sicherungs Verein in case of an insolvency of the subsidiaries concerned. Some portions of the obligation must be covered with securities in the same amount, while other portions must be covered by 115%.

United Kingdom — The Company UK Pension Scheme ("the Scheme") was implemented by Airbus Defence and Space Ltd., Stevenage (UK) as the principal employer. This plan comprises all eligible employees of Airbus Defence and Space Ltd. as well as all personnel, who were recruited by one of the Company subsidiaries located in the UK and participating in the scheme. The major part of the obligation is funded by scheme assets due to contributions of the participating companies. The Scheme is a registered pension scheme under the Finance Act 2004. The trustee's only formal funding objective is the statutory funding objective under the Pensions Act part 3 2004, which is to have sufficient and appropriate assets to cover the Scheme's obligations. Since 1 November 2013, this plan is generally closed for joiners, who participate in a separate defined contribution plan.

Moreover, the Company participates in the UK in several funded trustee-administered pension plans for both executive and non-executive employees with BAE Systems being the principal employer. The Company's most significant investments in terms of employees participating in these BAE Systems UK pension plans is Airbus Operations Ltd. Participating Airbus Operations Ltd. employees have continued to remain members in the BAE Systems UK pension plans due to the UK pension agreement between the Company and BAE Systems and a change in the UK pensions legislation enacted in April 2006.

For the most significant of these BAE Systems Pension Schemes, the Main Scheme, BAE Systems, the Company and the scheme Trustees agreed on a sectionalisation, which was implemented on 1 April 2016. Although BAE Systems remains the only principal employer of the Scheme, the Company has obtained powers in relation to its section which are the same as if it were the principal employer.

Based on the funding situation of the respective pension schemes, the pension plan trustees determine the contribution rates to be paid by the participating employers to adequately fund the schemes. The different UK pension plans in which the Company investments participate are currently underfunded. Airbus Operations Ltd. (for its section of the Main Scheme) and BAE Systems (for the other schemes) have agreed with the trustees various measures designed to make good the underfunding. These include (i) regular contribution payments for active employees well above such which would prevail for funded plans and (ii) extra employers' contributions.

In the event that an employer who participates in the BAE Systems pension schemes fails or cannot be compelled to fulfil its obligations as a participating employer, the remaining participating employers are obliged to collectively take on its obligations.

The Company considers the likelihood of this event as remote. However, for the Main Scheme the Company considers that its obligation is in principle limited to that related to its section.

In addition, the Company has two guarantees to cover its obligation towards the Scheme and the BAE Systems pension schemes. To mitigate its exposure, the first guarantee covers an amount up to GBP 1.25 billion for an unlimited period of time while the second one covers an uncapped amount terminating in 2046, respectively for the Scheme and the BAE Systems Pension Schemes.

Canada — Airbus Canada Limited Partnership sponsors defined benefit plans for its salaried, hourly and executive employees. In 2020 Airbus acquired Stella Aeronautics Saint-Laurent Inc. which sponsors a defined benefit plan for its salaried and hourly employees.

Actuarial risks for the Company

The Defined Benefit Obligation ("DBO") exposes the Company to actuarial risks, including mainly the following ones:

Market price risk — The return on plan assets is assumed to be the discount rate derived from AA-rated corporate bonds. If the actual return rate of plan assets is lower than the applied discount rate, the net liability increases accordingly. Moreover, the market values of the plan assets are subject to volatility, which also impacts the net liability.

Interest rate risk — The level of the DBO is significantly impacted by the applied discount rate. The low interest rates, particular in the euro-denominated market environment, lead to a relatively high net pension liability. If the decline in returns of corporate bonds continues, the DBO will further increase in future periods, which might only be offset partially by the positive development of market values of those corporate bonds included in plan assets. Generally, the pension obligation is sensitive to movements in the interest rate leading to volatile results in the valuation.

Inflation risk — The pension liabilities can be sensitive to movements in the inflation rate, whereby a higher inflation rate could lead to an increasing liability. Since some pension plans are directly related to salaries, increases in compensations could result in increasing pension obligations. For the deferred compensation plan P3, which is financed by the employees a fixed interest rate has been agreed.

Longevity risk — The pension liabilities are sensitive to the life expectancy of its members. Rising life expectancies lead to an increase in the valuation of the DBO.

Main average assumptions

The weighted average assumptions used in calculating the actuarial values of the most significant retirement plans as of 31 December 2021 are as follows:

(Rate in %)	Pension plans in									
	Germany		France		UK		Participation in BAE Systems Pension Scheme in the UK		Canada	
	2021	2020	2021	2020	2021	2020	2021	2020	2021	2020
Discount rate	1.1	0.5	1.0	0.4	2.0	1.5	1.9	1.4	3.3	2.8
Rate of compensation increase	2.8	2.8	2.5	2.5	3.3	2.6	3.1	2.6	2.9	2.8
Rate of pension increase	1.7	1.4	1.6	1.5	3.0	2.6	3.1	2.7	2.0	1.8
Inflation rate	1.7	1.4	1.6	1.5	3.2	2.7	3.2	2.8	2.0	1.8

Discount rate — For Germany and France, the Company derives the discount rate used to determine the DBO from yields on high quality corporate bonds with an AA rating. The determination of the discount rate is based on the iBoxx € Corporates AA bond data and uses the granularity of single bond data in order to receive more market information from the given bond index. The discount rate for the estimated duration of the respective pension plan is then extrapolated along the yield curve. In the UK, it is determined with reference to the full yield curve of AA-rated sterling-denominated corporate bonds of varying maturities. The salary increase rates are based on long-term expectations of the respective employers, derived from the assumed inflation rate and adjusted by promotional or productivity scales.

Rate of pension increase — Rates for pension payment increases are derived from the respective inflation rate for the plan.

Inflation rates — Inflation rate for German and French plans corresponds to the expected long term increase in cost of living. In the UK, the inflation assumptions are derived by reference to the difference between the yields on index-linked and fixed-interest long-term government bonds.

Mortality tables — For the calculation of the German pension obligation, the "2018 G" mortality tables (generation tables) as developed by Professor Dr. Klaus Heubeck are applied, while the disability rates of the Heubeck Tables have been reduced to 30%, to align with actual observation.

For the UK schemes, the Self-Administered Pensions S2 mortality tables based on year of birth (as published by the Institute of Actuaries) is used in conjunction with the results of an investigation into the actual mortality experience of scheme members. In France, Institute for French Statistics ("INSEE") tables are applied.

AIRBUS - FINANCIAL STATEMENTS 2021 - 41

Provision for retirement and deferred compensation plans

The development of the provision for retirement and deferred compensation plans is set out below:

(In € million)	DBO			Plan assets			Total provisions
	Pension plans of the Company	Participation in BAE Systems Pension Scheme in the UK		Pension plans of the Company	Participation in BAE Systems Pension Scheme in the UK		
		Total	Total		Total	Total

changes in financial assumptions	(1,378)	(75)	(1,453)	0	0	0	(1,453)
changes in experience adjustments	95	44	139	0	0	0	139
plan assets	0	0	0	(954)	(387)	(1,341)	(1,341)
Changes in consolidation, transfers and others	(12)	0	(12)	(14)	0	(14)	(26)
Benefits paid	(455)	(167)	(622)	156	167	323	(299)
Contributions by employer and other plan participants	117	1	118	(442)	(97)	(539)	(421)
Foreign currency translation adjustments	163	304	467	(134)	(238)	(372)	95
Balance at 31 December 2021	17,699	4,598	22,297	(11,353)	(3,872)	(15,225)	7,072

In the figures shown in the table, amounts of € 2,503 million and € 1,682 million are included for the defined benefit obligation and plan assets for deferred compensation plans in Germany (2020: € 2,625 million and € 1,435 million).

The past service cost included in the service cost amounts to € -228 million and € 106 million as of 31 December 2021 and 2020, respectively. The employer contributions amount to € 533 million and € 6 million for other plan participants as of 31 December 2021 (2020: € 331 million and € 8 million respectively).

Additionally, the Company considers liabilities for lump sum payments (one-off payment or lump sum instalments) under the German P3 and APP pension arrangements in the total amount of € 172 million and € 150 million as of 31 December 2021 and 2020, respectively.

AIRBUS - FINANCIAL STATEMENTS 2021 - 42

The funding of the plans is as follows:

	31 December			
	2021		2020	
(In € million)	DBO	Plan assets	DBO	Plan assets
Unfunded pension plans	1,406	0	1,716	0
Funded pension plans (partial)	20,891	(15,225)	21,432	(13,168)
Total	22,297	(15,225)	23,148	(13,168)

As of 31 December 2021, **provisions for pensions** decreased mainly due to the change in financial assumptions of € 1,453 million reflecting the further strengthening of interest rates and increased inflation assumptions in Germany, France, Canada and the UK and the increase in plan assets of € 1,341 million.

In 2021, contributions for retirement and deferred compensation plans amount to € 533 million. This consists of:

- payments made to the pension and deferred compensation plans of the Company of € 667 million (2020: € 250 million), mainly relating to the Contractual Trust Arrangement in Germany of € 431 million (2020: € 175 million) as well as to the Company UK scheme € 224 million (2020: € 55 million).
- withdrawals from the Contractual Trust Arrangement in Germany of € -230 million (2020: € 0 million)
- payments made to the participation in BAE Systems Pension Scheme in the UK of € 96 million (2020: € 81 million).

Contributions of approximately € 514 million are expected to be made in 2022.

The weighted average duration of the DBO for retirement plans and deferred compensation is 18 years at 31 December 2021 (31 December 2020: 19 years).

Pension obligations by countries and type of beneficiaries

The split of the DBO for retirement plans and deferred compensation between active, deferred and pensioner members for the most significant plans is as follows:

	Active	Deferred	Pensioner
Germany	51%	11%	38%
France	99%	0%	1%
UK	65%	17%	18%
Participation in BAE System Pension Scheme (Main Scheme)	41%	17%	42%
Canada	89%	1%	10%

Pension obligations by countries and type of plans

The split of the present value of DBO for retirement plans and deferred compensation for the most significant plans is as follows:

	Present value of DBO		Plan assets	
	Retirement plans	Deferred Compensation plans	Retirement plans	Deferred Compensation plans
Germany	81%	19%	81%	19%
France	100%	0%	100%	0%
UK	100%	0%	100%	0%
Participation in BAE System Pension Scheme (Main Scheme)	100%	0%	100%	0%
Canada	100%	0%	100%	0%

AIRBUS - FINANCIAL STATEMENTS 2021 - 43

Pension obligations sensitivity to main assumptions

The following table shows how the present value of the DBO of retirement plans and deferred compensation would have been influenced by changes in the actuarial assumptions as set out for 31 December 2021:

	Change in actuarial assumptions	Impact on DBO	
		Change at 31 December	
		2021	2020
Present value of the DBO		22,297	23,148
	Increase by 0.5%-point	(1,899)	(2,041)
Discount rate	Decrease by 0.5%-point	2,187	2,347
	Increase by 0.25%-point	168	176
Rate of compensation increase	Decrease by 0.25%-point	(160)	(169)
	Increase by 0.25%-point	438	449
Rate of pension increase	Decrease by 0.25%-point	(420)	(431)
Life expectancy	Increase by one year	654	718

Sensitivities are calculated based on the same method (present value of the DBO calculated with the projected unit method) as applied when calculating the post-employment benefit obligations. The sensitivity analyses are based on a change of one assumption while holding all other assumptions constant. This is unlikely to occur in practice and changes of more than one assumption may be correlated leading to different impacts on the DBO than disclosed above. If the assumptions change at a different level, the effect on the DBO is not necessarily in a linear relation.

Plan assets allocation

The fair value of the plan assets for retirement plans and deferred compensation can be allocated to the following classes:

	2021			2020		
	Quoted prices	Unquoted prices	Total	Quoted prices	Unquoted prices	Total
<i>(In € million)</i>						
Equity securities						
Europe	1,539	0	1,539	1,197	0	1,197
Rest of the world	408	0	408	356	0	356
Emerging markets	561	0	561	503	0	503
Global	2,896	693	3,589	2,820	194	3,014
Bonds	0	0				
Corporates	3,125	283	3,408	3,001	271	3,272
Governments	2,393	0	2,393	2,332	0	2,332
Pooled investments vehicles	328	0	328	295	0	295
Commodities	0	0	0	0	0	0
Hedge funds	0	459	459	0	398	398
Derivatives	0	(71)	(71)	0	(129)	(129)
Property	0	723	723	0	464	464
Cash and money market funds	344	263	607	3	106	109
Others	0	1,281	1,281	0	1,357	1,357
Balance at 31 December	11,594	3,631	15,225	10,507	2,661	13,168

The majority of funded plans apply broadly an asset-liability matching framework. The strategic asset allocation of the plans takes into account the characteristics of the underlying obligations. Investments are widely diversified, such that the failure of any single investment would not have a material impact on the overall level of assets. A large portion of assets in 2021 consists of fixed income and equity instruments, although the Company also invests in property, commodities and hedge funds. The Company reassesses the characteristics of the pension obligations from time to time or as required by the applicable regulation or governance framework. This typically triggers a subsequent review of the strategic asset allocation.

AIRBUS - FINANCIAL STATEMENTS 2021 - 44

Provisions by countries

The amount recorded as provision for retirement and deferred compensation plans can be allocated to the countries as follows:

Pension plans of the Company					Participation in BAE Systems Pension Scheme in the UK	Total
(In € million)	Germany	France	UK	Canada		
DBO	13,330	1,941	1,858	570	4,598	22,297
Plan assets	9,063	21	1,858	411	3,872	15,225
Recognised at 31 December 2021	4,267	1,920	0	159	726	7,072
DBO	14,317	2,274	1,646	541	4,370	23,148
Plan assets	8,179	22	1,358	337	3,272	13,168
Recognised at 31 December 2020	6,138	2,252	288	204	1,098	9,980

Contributions to defined contribution plans

Employer's contribution to state and private pension plans, mainly in Germany and France, are to be considered as defined contribution plans. Contributions in 2021 amounted to € 983 million (2020: € 813 million).

32. Share-based Payment

Share-based compensation — Since 2016, the Company operates a **Performance Units and Performance Shares Plan**. *Performance Units qualify as a cash-settled share based payment plan under IFRS 2 and Performance Shares qualify as an equity-settled share-based payment plan under IFRS 2.*

Since 2021, the Company operates only a Performance Shares Plan.

Plans granting Restricted Units, Performance Units and/or Performance Shares are also mentioned as "LTIP" in the following notes.

Since 2018, the Company operates also exceptional grants of Performance and Restricted Units as well as Performance and Restricted Shares under an Equity Pool. Such exceptional grants are validated by specific resolutions from the Board of Directors and qualify as cash-settled or equity-settled share-based payment plans under IFRS 2. Accounting principles and methodology are the ones applied for LTIP as described below.

For cash-settled plans, provisions for associated services received are measured at fair value by multiplying the number of units expected to vest with the fair value of one LTIP unit at the end of each reporting period, taking into account the extent to which the employees have rendered service to date. Changes of the fair value are recognised as personnel expenses of the period, leading to a re-measurement of the provision. The fair value of Performance Units is re-measured at each closing date as far as they are not paid.

For equity-settled plans, compensation expense is measured at the grant date at the fair value by multiplying the number of shares expected to vest by the fair value of one LTIP share taking into account the extent to which the employees have rendered service to date. The compensation expense is accounting for over the vesting period of each LTIP equity-settled plans.

The fair value of each LTIP share (equity or cash-settled plans) is determined using a forward pricing model and is based on publicly available risk free rate, volatility and dividend rate.

Besides the equity-settled plans described above, the **Employee Share Ownership Plan ("ESOP")** is an additional equity-settled share-based payment plan. Under this plan, the Company offers its employees Airbus SE shares at fair value matched with a number of free shares based on a determining ratio. The fair value of shares provided is reflected as personnel expenses in the Company's Consolidated Income Statement with a corresponding increase in equity.

32.1 LTIP

The Company hedges the share price risk inherent in the cash-settled LTIP units by entering into equity swaps where the reference price is based on the Airbus SE share price. To the extent that cash-settled LTIP units are hedged, compensation expense recognised for these units will effectively reflect the reference price fixed under the equity swaps. In order to avoid any dilution of its current shareholders out of equity-settled LTIP units, the Company used to perform share buybacks to meet its obligations to its employees, following the decisions of the Board of Directors and approval of the AGM.

In 2021, compensation expense for LTIPs (incl. Equity Pool) including the effect of the equity swaps amounted to € 36 million (2020: € -2 million), among which € 23 million for cash-settled plans (2020: € -9 million) and € 13 million for equity-settled plans (2020: € 7 million).

As of 31 December 2021, provisions of € 55 million (2020: € 59 million) relating to LTIP units (cash-settled) have been accounted for.

The lifetime of the Performance Units as well as Performance Shares is contractually fixed (see the description of the respective tranche in the following table). For the units, the measurement is next to other market data, mainly affected by the share price as of the end of the reporting period (€ 112.36 as of 31 December 2021) and the lifetime of the units.

AIRBUS - FINANCIAL STATEMENTS 2021 - 45

The fair value of units and shares granted in the frame of the LTIP 2021 plan is as follows:

Expected vesting date (In € per unit / share granted)	Fair value of Performance Shares
May 2025 - Performance Shares	89.83

The principal characteristics of the LTIPs as at 31 December 2021 are summarised below:

	LTIP 2016 ⁽⁷⁾		LTIP 2017 ⁽⁸⁾		LTIP 2018 ⁽⁹⁾		LTIP 2019		LTIP 2020		LTIP 2021
	Units	Shares	Units	Shares	Units	Shares	Units	Shares	Units	Shares	Shares
Grant date ⁽¹⁾	25 October 2016		30 October 2017		30 October 2018		29 October 2019		28 October 2020		15 December 2021
	Performance Units and Performance Shares Plan

Total number of eligible beneficiaries	1,671		1,601		1,626		1,576		1,602		1,770
Vesting conditions	The Performance and Restricted Units and Performance Shares will vest if the participant is still employed by a company of the Group at the respective vesting dates. Performance Units and Shares will vest upon achievement of mid-term business performance. Vesting schedule is made up of two payments over two years.										
Share price per unit limited at vesting dates to (6)	€ 105.34	-	€ 147.62	-	€ 213.88	-	€ 244.12	-	€ 136.08	-	-
Vesting dates	50% in May 2020 and 50% expected in May 2021	100% in June 2020	50% each expected: in June 2021 in June 2022	100% in May 2021	50% each expected: in June 2022 in June 2023	100% expected in May 2022	50% each expected: in June 2023 in June 2024	100% expected in May 2023	50% each expected: in June 2024 in June 2025	100% expected in May 2024	100% expected in May 2025
Number of vested units	422,866	429,531	96,911	194,975	0	0	0	0	0	0	0

(1) Date, when the vesting conditions were determined.

(2) Based on 100% target performance achievement. A minimum of 50% of Performance Units will vest; 100% in case of on-target performance achievement; up to a maximum of 150% in case of overachievement of performance criteria. In case of absolute negative results (cumulative EBIT of the Company) during the performance period, the Board of Directors can decide to review the vesting of the Performance Units including the 50% portion which is not subject to performance conditions (additional vesting condition).

(3) Values are provided for units corresponding per vesting date.

(4) Mirroring the respective plan rules and regulations, but granted at a different date based on specific Board of Directors' resolutions.

(5) Including shares granted through the Equity Pool, if applicable.

(6) Corresponds to 200% of the respective reference share price. Overall, the pay-out for Performance Units is limited to a total amount of 250% of the units originally granted, each valued with the respective reference share price of € 52.67 (for LTIP 2016), € 73.81 (for LTIP 2017), € 106.94 (for LTIP 2018), € 122.06 (for LTIP 2019) and € 68.04 (for LTIP 2020).

(7) Based on performance achievement of 75% for Performance Units under LTIP 2016.

(8) Based on performance achievement of 50% for Performance Units under LTIP 2017.

(9) Based on performance achievement of 50% for Performance Units under LTIP 2018.

AIRBUS - FINANCIAL STATEMENTS 2021 - 46

Additionally, the Board of Directors approved in 2021 the exceptional grant of 1,354 Restricted & Performance Units and 10,725 Restricted & Performance Shares under the Equity Pool with an average fair value of € 102.87. 2,017 Units and 3,758 Shares have vested in 2021. As of 31 December 2021, the number of units outstanding is 6,086 Units and 13,247 Shares.

32.2 ESOP

In 2021 and 2020, the Board of Directors approved a new ESOP scheme. Eligible employees were able to purchase a fixed number of previously unissued shares at fair market value (5, 15, 30, 50 or 100 shares in 2021, 5, 10, 15, 30 or 100 shares in 2020). The Company matched each fixed number of shares with a number of the Company free shares based on a determined ratio (4, 7, 10, 13 and 25 free shares, respectively in 2021, versus 4, 6, 7, 10 and 25 free shares, respectively in 2020). During a custody period of at least one year, employees are restricted from selling the shares, but have the right to receive all dividends paid. Employees who directly purchased the Airbus SE shares have, in addition, the ability to vote at the Annual Shareholder Meetings. The subscription price was equal to the closing price at the Paris stock exchange on 17 February 2021 (2020: 12 February 2020) and amounted to € 93.90 (2020: € 136.60). Investing through a mutual fund led to a price which corresponds to the average price at the Paris stock exchange during the 20 trading days immediately preceding 17 February 2021 (2020: 12 February 2020), resulting in a price of € 89.52 (2020: € 136.00).

In 2021, the Company issued and sold 1,442,645 ordinary shares (2020: 671,640) with a nominal value of € 1.00 each.

In 2021, the Company issued and distributed 491,775 matching ordinary shares (2020: 304,515) with a nominal value of € 1.00 each. Compensation expense (excluding social security contributions) of € 49 million (2020: € 34 million) was recognised in connection with ESOP in 2021.

33. Remuneration

33.1 Remuneration – Executive Committee

The Company's key management personnel consists of Members of the Executive Committee and Non-Executive Board Members. The Chief Executive Officer ("CEO"), who chairs the Executive Committee, is the sole Executive Board Member. The annual remuneration and related compensation costs of the key management personnel as expensed in the respective year can be summarised as follows:

(In € million)	2021	2020
Executive Committee, including Executive Board Member		
Salaries and other short-term benefits (including bonuses)	19.5	16.1
Post-employment benefit costs	5.2	4.8
Share-based remuneration ("LTIP award", including associated hedge result)	3.4	1.0
Termination benefits (1)	6.1	0
Other benefits	0.4	0.5
Social charges (2)	4.6	4.7
Non-Executive Board Members		
Short-term benefits (including social charges)	2.0	2.2
Total expense recognised	41.2	29.3

(1) 2021 Termination benefits include the termination benefits paid in 2021 based on last information available and applicable law.

(2) Costs of benefits provided through applicable mandatory collective and social security plans are accounted for among social charges.

Salaries and Other Short-Term Benefits (Including Bonuses)

The amount of bonuses is based on estimated performance achievement as at the balance sheet date and difference between previous year estimation and actual pay-out in the current year. Outstanding short-term benefits (bonuses) at year-end 2021 for Executive Committee Members based on estimated performance achievement at year-end was € 11.4 million (2020: € 7.7 million).

in order to support the objective target of reducing CO2 emissions by 40% by 2035, the Board of Directors decided to disclose the

Post-Employment and Other Long-Term Benefits

The post-employment and other long-term benefits defined obligation for the Executive Committee, including the CEO, amounted to € 25.6 million at 31 December 2021 (2020: €32.8 million). The disclosed post-employment and other long-term benefits reflect the total outstanding balance for all Executive Committee Members in charge at the end of the respective balance sheet date.

AIRBUS - FINANCIAL STATEMENTS 2021 - 47

Share-Based Remuneration ("LTIP Award")

The share-based payment expenses result from not yet forfeited units and shares granted to the Executive Committee Members under the Company's LTIP which are re-measured at fair value according to the methodology described in Note 32.

In 2021, the Members of the Executive Committee were granted 66,575 Performance Shares (2020: 50,814 Performance Shares and 50,814 Performance Units). For LTIP 2021, the respective fair value of these Shares at grant date was € 6.5 million (2020: € 7.6 million for both Performance Shares and Performance Units). As of 31 December 2021, provisions of € 5.4 million (2020: € 5.0 million) relating to LTIP have been recognised. The total number of outstanding Performance Units and Performance Shares granted to the current Members of the Executive Committee amounted to 91,180 and 152,967 respectively at 31 December 2021 (2020: 133,966 Performance Units and 133,966 Performance Shares).

Termination Benefits

The following benefits apply to Executive Committee Members, except the CEO.

In the case of contract termination, the Executive Committee Members are entitled to an indemnity equal to 1.5 times the Total Target Remuneration (defined as Base Salary and target Annual Variable Remuneration) with respect to applicable local legal requirements, if any.

This will not apply if the Executive Committee mandate is terminated for cause, in case of dismissal, if the Executive Committee Member resigns or has reached retirement age.

The Executive Committee Members' contract includes a non-compete clause which applies for a minimum of one year and can be extended at the Company's initiative for a further year. The Board of Directors has the discretion to waive or invoke the extension of the non-compete clause when legally or contractually possible. The compensation for each year that the non-compete clause applies is equal to 50% of the last Total Annual Remuneration (defined as Base Salary and Annual Variable Remuneration most recently paid) with respect to applicable local legal requirements, if any.

Past LTIP awards may be maintained in full or prorated, in such cases as in case of retirement or if a mandate is not renewed by the Company without cause, pro rata being based on the presence in the Company during performance periods. The vesting of past LTIP awards follows the plans' rules and regulations and is not accelerated in any case. LTIP awards are forfeited for Executives who leave the Company on their own initiative, but this is subject to review by the Board of Directors.

The termination benefits include assumptions about all effective, known or planned terminations to date.

Other Benefits

Other benefits include expenses for Executive Committee Members' medical, death and disability coverage, company car and other usual facilities as applicable.

33.2 Remuneration – CEO

The annual remuneration and related compensation costs of the CEO as expensed in the respective year can be summarised as follows:

(In €)	2021	2020
Base salary	1,350,000	1,350,000
Annual variable pay	22,247,750	1,357,262
Post-employment benefit costs	1,138,794	1,179,332
Share-based remuneration ("LTIP award") (1)	822,906	206,337
Termination benefits	0	0
Other benefits	32,479	33,790
Social charges (2)	1,089,385	1,102,840

(1) Expense related to share-based payment plans as recognised in the annual period (service period) including the result from the hedge of cash-settled share-based payment (see "Note 32: Share-Based Payment").

(2) Social charges depends on the applicable regulation to the CEO. In France, social charges comprise benefits accrued through mandatory collective and state plans such as pension, death and disability or medical coverage.

Annual Variable Pay

The annual variable pay is based on estimated performance achievement as at the balance sheet date and difference between the previous year's estimation and actual pay-out in the current year.

AIRBUS - FINANCIAL STATEMENTS 2021 - 48

Post-Employment Benefit Costs

Post-employment benefit costs relate to the aggregated amount of current service and interest costs for defined benefit plan and company cost for contributions base plans.

Following the Board decision approved in the AGM 2020, the CEO pension rights are accrued through a defined contributions plan from 1 January 2020, which coexists with the former defined benefit pension plan.

The accrued pension rights under the former defined benefit plan have been frozen at the end of 2019 and remain unvested until the retirement date of the CEO. The pension rights arising from the Company's defined contribution plan are deducted from the frozen defined pension rights.

As of 31 December 2021, the defined benefit obligation related to the frozen defined benefit commitment amounts to € 9,048,433 (€ 9,423,777 in 2020). This obligation has been accrued in the 2021 Consolidated Financial Statements and will be updated annually up to the retirement date of the CEO considering additional service cost and future changes on economic assumptions or other factors like salary increase.

For the fiscal year 2021, the cost related to the CEO's pension rights accrued under Company's plans during the year represented an expense of € 1,138,794 (versus an expense of € 1,179,332 in 2020).

The annual cost of pension rights accrued under applicable mandatory collective and state pension plans are accounted for among social charges

Share-based Remuneration

The table below gives an overview of the interests of the CEO, under the various LTIPs of the Company:

Granted Date	LTIP 2016 ⁽¹⁾	LTIP 2017 ⁽¹⁾	LTIP 2018 ⁽¹⁾	LTIP 2019	LTIP 2020	LTIP 2021
Performance Units and Shares	11,392	8,808	8,416	11,060	19,840	12,121
Revaluation	75%	50%	50%	100%	100%	100%
Performance Units and Shares revalued	8,544	4,404	4,208	11,060	19,840	12,121
Vested in 2021						
in cash	2,136	1,101	0	0	0	0
in shares	0	2,202	0	0	0	0
Outstanding 2021						
in cash	0	1,101	2,104	5,530	9,920	0
in shares	0	0	2,104	5,530	9,920	12,121
Vesting schedule						
Cash-settled units	For vesting dates, see "- Note 32.1: LTIP"					
Equity-settled units	May 2020	May 2021	May 2022	May 2023	May 2024	May 2025

(1) 2016 to 2018 awards were granted before the appointment of the CEO and could vest during the CEO's mandate.

Vesting of all Performance Units and Performance Shares granted to the CEO is subject to performance conditions.

As of 31 December 2021, provisions of € 1,188,050 (2020: € 919,556) relating to Performance Units have been recognised. The pay-out from vested cash-settled LTIP in 2021 was € 324,504 (2020: € 401,261) excluding social charges.

Termination Benefits

The termination benefit applicable to the CEO is described in the Company's Remuneration policy.

Other Benefits

As stipulated in the Company's Remuneration Policy, the benefits offered to the CEO are similar to the benefits granted to other executives of the Company and comprise, among other matters, medical, death and disability coverage (both through the French social security system and mandatory collective Company's plans), a company car and usual facilities. Costs of benefits provided through applicable mandatory collective and social security plans are accounted for among social charges. The monetary value of other benefits provided to the CEO in 2021 amounted to € 32,479 (2020: € 33,790).

The Company has not provided any loans to, advances to and guarantees on behalf of the CEO.

33.3 Remuneration – Board of Directors

The remuneration of the Non-Executive Members of the Board of Directors was as follows:

(In €)	2021			2020		
	Fixum ⁽¹⁾	Attendance Fees ⁽²⁾	Total	Fixum ⁽¹⁾	Attendance Fees ⁽²⁾	Total
Non-Executive Board Members						
René Obermann ⁽³⁾	210,000	90,000	300,000	117,738	76,250	193,988
Victor Chu	100,000	43,000	143,000	100,000	78,000	178,000
Jean-Pierre Clamadieu ⁽⁴⁾	130,000	67,500	197,500	127,087	90,000	217,087
Ralph D. Crosby Jr.	100,000	61,000	161,000	100,000	83,000	183,000
Lord Drayson	120,000	49,500	169,500	120,000	80,000	200,000
Mark Dunkerley ⁽⁵⁾	100,000	66,000	166,000	70,879	48,000	118,879
Stephan Gemkow ⁽⁵⁾	100,000	63,000	163,000	70,879	58,000	128,879
Catherine Guillouard	130,000	67,500	197,500	130,000	93,000	223,000
María Amparo Moraleda Martínez	130,000	54,500	184,500	130,000	85,000	215,000
Claudia Nemat	100,000	56,500	156,500	100,000	80,000	180,000

Carlos Tavares	80,000	45,000	125,000	80,000	70,000	150,000
----------------	--------	--------	---------	--------	--------	---------

Former Non-Executive Board Members

Denis Ranque ⁽⁶⁾	-	-	-	61,731	35,000	96,731
Hermann-Josef Lamberti ⁽⁷⁾	-	-	-	35,274	35,000	70,274
Total	1,300,000	663,500	1,963,500	1,243,588	911,250	2,154,838

- (1) Fixum includes a base fee for Board membership and Committee membership within the Audit Committee, the Remuneration, Nomination and Governance Committee ("RNGC") and/or the Ethics, Compliance and Sustainability Committee ("ECSC") as the case may be. The fixum for the year 2021 was paid 50% in January 2021 and 50% in July 2021. The fixum for the year 2020 was paid 50% in January 2020 and 50% in July 2020.
- (2) 2021 attendance fees include the Board attendance fees and the fees in relation to Audit Committee, RNGC and ECSC meetings. The Board attendance fees related to the first semester 2021 were paid in July 2021, those related to the second semester 2021 were paid in January 2022. The Committees' attendance fees related to full year 2021 were paid in January 2022.
- (3) Chairman of the Board of Directors since 16 April 2020. Member of the Audit Committee until 16 April 2020. Member of the former Ethics & Compliance Committee between 30 July 2019 and 16 April 2020. As a reminder, René Obermann waived half of his 2020 remuneration (including fixum and attendance fees as Chairman of the Board).
- (4) Member of the former Ethics & Compliance Committee until 16 April 2020. Chair of the ECSC since then.
- (5) Member of the Board of Directors and of the Audit Committee since 16 April 2020.
- (6) Chairman of the Board of Directors and of the former Ethics & Compliance Committee until 16 April 2020.
- (7) Member of the Board of Directors and of the Audit Committee until 16 April 2020.

AIRBUS - FINANCIAL STATEMENTS 2021 - 50

2.7 Capital Structure and Financial Instruments

34. Total Equity

34.1 Equity Attributable to Equity Owners of the Parent

The Company's shares are exclusively ordinary shares with a par value of €1.00. The following table shows the development of the number of shares issued and fully paid:

(In number of shares)	2021	2020
Issued at 1 January	784,149,270	783,173,115
Issued for ESOP	1,934,420	976,155
Issued for convertible bond	0	0
Issued at 31 December	786,083,690	784,149,270
Treasury shares	(454,735)	(432,875)
Outstanding at 31 December	785,628,955	783,716,395

Holders of ordinary shares are entitled to dividends and to one vote per share at general meetings of the Company.

Equity attributable to equity owners of the parent (including purchased treasury shares) amounts to €9,466 million (2020: €6,445 million) representing an increase of €+3,021 million. This is due to a net income for the period of €+4,213 million and a decrease in other comprehensive income, principally related to the mark to market revaluation of the hedge portfolio of €-3,710 million partly offset by a change in actuarial gains and losses of €+2,363 million.

Capital stock comprises the nominal amount of shares outstanding. The addition to capital stock represents the contribution for exercised options by employees of €1,934,420 (2020: €976,155) in compliance with the implemented ESOPs.

Share premium mainly results from contributions in kind in the course of the creation of the Company, cash contributions from the Company's initial public offering, capital increases and reductions due to the issuance and cancellation of shares.

Retained earnings include mainly the profit for the period and the changes in other comprehensive income from remeasurements of the defined benefit pension plans net of tax which amounts to €+2,363 million in 2021 (2020: €-1,268 million).

On 23 March 2020, the Company has decided the withdrawal of 2019 dividend proposal with cash value of €1.4 billion in response to the COVID-19 pandemic (see "– Note 2: Impact of the COVID-19 pandemic"). For the fiscal year 2021, the Company's Board of Directors proposes a cash distribution payment of €1.50 per share.

Treasury shares represent the amount paid or payable for own shares held in treasury. During 2021, the number of treasury stock held by the Company increased to 454,735 compared to 432,875 as of 31 December 2020, mainly due to the share buybacks partly offset by vested shares in 2021 under LTIP 2017 (see "– Note 32: Share-based Payment"). No shares were sold back to the market nor cancelled (2020: 0 shares).

On 14 April 2021, the AGM of the Company authorised the Board of Directors, for a period expiring at the AGM to be held in 2022, to issue shares and to grant rights to subscribe for shares in the Company's share capital for the purpose of:

- ESOPs and share-related LTIPs, provided that such powers shall be limited to an aggregate of 0.14% of the Company's authorised share capital (see "– Note 32: Share-based Payment");
- funding the Company and its subsidiaries, provided that such powers shall be limited to an aggregate of 0.3% of the Company's authorised share capital (see "– Note 36.3: Financing Liabilities").

For each operation, such powers shall not extend to issuing shares or granting rights to subscribe for shares if there is no preferential subscription right and for an aggregate issue price in excess of € 500 million per share issuance.

Also on 14 April 2021, the AGM authorised the Board of Directors for an 18-month period to repurchase up to 10% of the Company's issued share capital at a price per share not less than the nominal value and not more than the higher of the price of the last independent trade and the highest current independent bid on the trading venues of the regulated market of the country in which the purchase is carried out.

Furthermore, the AGM authorised the Board of Directors to determine on a case by case basis the share repurchase programmes to be implemented by the Company, if any.

34.2 Non-Controlling Interests

The **non-controlling interests ("NCI")** from non-wholly owned subsidiaries increased to €20 million as of 31 December 2021 (2020: €11 million). These NCI do not have a material interest in the Company's activities and cash flows.

AIRBUS - FINANCIAL STATEMENTS 2021 - 51

35. Capital Management

The Company seeks to maintain a strong financial profile to safeguard its going concern, financial flexibility as well as shareholders', credit investors' and other stakeholders' confidence in the Company. Consequently, operating liquidity is of great importance.

As part of its capital management, it is one of the Company's objectives to maintain a strong credit rating by institutional rating agencies. This enables the Company to contain its cost of capital which positively impacts its stakeholder value (entity value). Next to other non-financial parameters, the credit rating is based on factors such as cash flow, profitability, leverage ratios and liquidity ratios. The Company monitors these ratios to keep them in a range compatible with a strong rating.

Rating agency	Long-term rating	Outlook	Short-term rating
Standard and Poor's	A	Negative	A-1
Moody's Investors Services	A2	Negative	P1
Fitch Rating (unsolicited)	BBB+	Stable	F1

The stand-alone rating reflects the Company's strong backlog providing revenue visibility, leading market position, operating performance, strong liquidity and solid balance sheet. It also reflects the Company's reaction to the COVID-19 pandemic, including the adaptation of the production rate to meet customer demand, cost reductions and cash containment measures, as well as the uncertainties related to the length of the outbreak and the recovery pattern of demand for aircrafts post outbreak. Finally, it reflects the management's focus on programmes execution, profitability and cash generation improvement.

In accordance with the Company's conservative financial policy, a strong rating is key to maintain a wide array of funding sources at competitive conditions, to have broad access to long-term hedging and to strengthen the Company's position as a financially sound counterparty for its customers and suppliers.

A five year plan for rating and a value creation ambition is constructed annually, and is composed of (i) EBIT and (ii) Free Cash Flow, which is defined as Cash provided by operating activities and Cash used for investing activities less Change of securities, Contribution to plan assets for pensions, realised Treasury swaps and bank activities.

The Company uses the WACC to determine the Net Present Value ("NPV"), which is used for any investment decision.

The Company also monitors the level of dividends paid to its shareholders.

The Company generally satisfies its obligations arising from **ESOPs** and Share Incentive Plans ("SIPs") by issuing new shares. In order to avoid any dilution of its current shareholders out of **LTIPs**, the Company performs share buybacks to meet its obligations to its employees, following the decisions of the Board of Directors and approval of the AGM. Apart from this purpose, the Company generally does not trade with treasury shares.

The Company complies with the capital requirements under applicable law and its Articles of Association.

36. Net Cash

The net cash position provides financial flexibility to fund the Company's operations, to react to business needs and risk profile and to return capital to the shareholders.

(In € million)	31 December	
	2021	2020
Cash and cash equivalents	14,572	14,439
Current securities	1,317	1,618
Non-current securities	6,794	5,350
Gross cash position	22,683	21,407
Short-term financing liabilities	(1,946)	(3,013)
Long-term financing liabilities	(13,094)	(14,082)
Total	7,643	4,312

The net cash position on 31 December 2021 amounted to € 7,643 million (2020: € 4,312 million), with a gross cash position of € 22,683 million (2020: € 21,407 million).

Derivative instruments recognised on the Company's Statement of Financial Position consist of (i) instruments that are entered into as hedges of the Company's operating activities or interest result, and (ii) embedded foreign currency derivatives that arise from separating the foreign currency component from certain operating contracts. Cash flows resulting from the settlement of these derivatives are therefore recorded as part of cash flow from operations. Similarly, financial assets and liabilities arising from customer financing activities and refundable advances from European Governments are considered part of operating activities and related cash flows are hence recognised as cash flows from operating activities.

36.1 Cash and Cash Equivalents

Cash and cash equivalents are composed of the following elements:

(In € million)	31 December	
	2021	2020
Bank account and petty cash	1,964	4,173
Short-term securities (at fair value through profit or loss)	12,075	9,654
Short-term securities (at fair value through OCI)	533	512
Others	0	100
Total cash and cash equivalents	14,572	14,439

Only securities with a maturity of three months or less from the date of the acquisition, that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value, are recognised in cash equivalents.

Cash and cash equivalents have increased by € +0.2 billion from € 14.4 billion at 31 December 2020 to € 14.6 billion at 31 December 2021 and they include payments received in advance from certain customers.

The main variations are as follows:

Cash provided by operating activities amounted to € +4.6 billion in 2021, mainly driven by a profit translated into cash partly offset by provision consumption related to the restructuring plan, a positive impact from working capital which mainly reflects the delivery of the last A380 aircraft and the reduction in the widebodies inventory largely offset by a negative impact from contract assets and contract liabilities. In addition, it includes the net payment made to suppliers in anticipation and the negative impact due to the expiry of certain agreements reached with suppliers relating to payment terms.

Cash used for investing activities amounted to € -2.7 billion, mainly reflecting capital expenditures and securities. The acquisition of real estate assets in the UK has negatively impacted cash used for investing activities, and also negatively impacted cash used for financing activities relating to the repayment of the existing lease liabilities.

Cash used for financing activities amounted to € -2.2 billion and reflects the pre-payment of a US\$1 billion bond issued on 9 April 2013 and the repayment of the exchangeable bonds convertible into Dassault Aviation shares for an amount of € 1.0 billion.

Similar to previous years, the Company has supported its suppliers concerning supply chain financing arrangements.

36.2 Securities

The majority of the Company's securities consists of debt securities and are classified at fair value through OCI (see "– Note 37.2: Carrying Amounts and Fair Values of Financial Instruments").

The Company's securities portfolio amounts to € 8,111 million and € 6,968 million as of 31 December 2021 and 2020, respectively. The security portfolio contains a non-current portion of € 6,794 million (2020: € 5,350 million), and a current portion of € 1,317 million (2020: € 1,618 million).

Included in the securities portfolio as of 31 December 2021 and 2020, respectively, are corporate and government bonds bearing either fixed rate coupons (€ 7,866 million nominal value; 2020: € 6,714 million) or floating rate coupons (€ 103 million nominal value; 2020: € 108 million), and foreign currency funds of fixed income funds (€ 2 million fair value; 2020: € 2 million).

When the Company enters into securities lending or other financing activities that involve the pledging of securities as collateral, the securities pledged continue to be recognised on the balance sheet. As of 31 December 2021, securities for an amount of € 0 million were pledged as collateral for borrowings from banks (2020: € 99 million).

36.3 Financing Liabilities

Financing liabilities comprise obligations towards financial institutions, issued corporate bonds, deposits made by customers of Airbus Bank, borrowings received from joint ventures and other parties as well as finance lease liabilities. Financing liabilities are recorded initially at the fair value of the proceeds received, net of transaction costs incurred. Subsequently, financing liabilities are measured at amortised cost, using the effective interest rate method with any difference between proceeds (net of transaction costs) and redemption amount being recognised in total finance income (cost) over the period of the financing liability.

Financing liabilities to financial institutions may include liabilities from securities lending transactions. In securities lending transactions, the Company receives cash from its counterparty and transfers the securities subject to the lending transaction as collateral. The counterparty typically has the right to sell or repledge the securities pledged. The amount of cash received is recognised as a financing

liability. The securities pledged are not derecognised, but remain on the Company's Statement of Financial Position.

	31 December	
(In € million)	2021	2020
Bonds and commercial papers	11,061	12,032
Liabilities to financial institutions	467	418
Loans	75	94
Lease liabilities	1,491	1,538
Total long term financing liabilities	13,094	14,082
Bonds and commercial papers	0	1,075
Liabilities to financial institutions	26	111
Loans	96	94
Lease liabilities	245	260
Others ⁽¹⁾	1,579	1,473
Total short term financing liabilities	1,946	3,013
Total	15,040	17,095

(1) Included in "others" are financing liabilities to joint ventures.

Long-term financing liabilities, mainly comprising of bonds and lease liabilities, decreased by € -988 million to € 13,094 million (2020: € 14,082 million), mainly due to pre-payment of a US\$1 billion bond issued on 9 April 2013 in the US institutional market with an original maturity of ten years.

Short-term financing liabilities decreased by € -1,067 million to € 1,946 million (2020: € 3,013 million), mainly due to the repayment of the exchangeable bonds to be convertible into Dassault Aviation shares issued on 14 June 2016 for an amount of € 1.0 billion.

Prior to 2021, the Company issued several euro-denominated bonds under its EMTN programme and three stand-alone US dollar-denominated bonds on the US institutional market under Rule 144A.

The Company can issue **commercial papers** under its € 11 billion Negotiable European Commercial Paper ("NEuCP") programme, its €4 billion Euro Commercial Paper ("ECP") programme and its \$ 3 billion US Commercial Paper programme.

As of 31 December 2021, there were no outstanding amounts under any of its commercial paper programmes.

AIRBUS - FINANCIAL STATEMENTS 2021 - 54

The terms and repayment schedules of these bonds and loans are as follows:

	Carrying amount			Issuance date	Coupon or interest rate	Effective interest rate	Maturity date	Additional features

AIRBUS - FINANCIAL STATEMENTS 2021 - 55

37. Financial Instruments

37.1 Financial Risk Management

By the nature of its activities, the Company is exposed to a variety of financial risks: (i) market risks, in particular foreign exchange risk, but also interest rate risk, equity price risk and commodity price risk, (ii) liquidity risk and (iii) credit risk. The Company's overall financial risk management activities focus on mitigating unpredictable financial market risks and their potential adverse effects on the Company's operational and financial performance.

The financial risk management of the Company is generally carried out by the Treasury department of the Company under policies approved by the Board of Directors or by the Chief Financial Officer. The identification, evaluation and hedging of the financial risks is in the joint responsibility of several established specific committees such as the Foreign Exchange Committee and the Asset Liability Management Committee, including the Company business segments.

The Company uses financial derivatives solely for risk mitigating purposes ("hedging") and applies hedge accounting for a significant portion of its hedging portfolio.

Market Risk

Foreign exchange risk — Foreign exchange risk arises when future commercial transactions or firm commitments, recognised monetary assets and liabilities and net investments in foreign operations are denominated in a currency that is not the entity's functional currency.

The Company manages a long-term hedge portfolio with maturities of several years covering its net exposure to US dollar sales, mainly from the commercial activities of Airbus. This hedge portfolio covers a large portion of the Company's firm commitments and highly probable forecasted transactions.

For Airbus, the highly probable criteria of the underlying foreign currency exposure of cash flow hedges is assessed based on the IFRS15 backlog value analysis. This consists in reducing the contractual firm backlog by all deliveries which cannot be considered as highly probable due to the existence of either cancellation rights, risk of bankruptcy or other risk of order restructuring. The latter assessments is taking into account customers' situation and commercial aspects. The resulting backlog is further adjusted to the foreign exchange management hedging horizon. The highly probable underlying foreign currency exposure is then capped to the production plan when applicable.

Most of the Company's revenue is denominated in US dollars, while a major portion of its costs is incurred in euro and to a lesser extent in other foreign currencies. Consequently, to the extent that the Company does not use financial instruments to hedge its exposure resulting from this currency mismatch, its profits will be affected by changes in the €/US\$ exchange rate. As the Company intends to generate profits primarily from its operations rather than through speculation on exchange rate movements, it uses hedging strategies to manage and minimise the impact of exchange rate fluctuations on these profits.

With respect to its commercial aircraft products, as of 30 June 2018, the Company adopted a new hedge strategy to hedge its net exposure (US dollar revenue less US dollar cost) resulting from commercial aircraft deliveries of specific aircraft types. The strategy more closely aligns hedge accounting with risk management activities.

Under the new strategy the foreign exchange derivatives used as hedging instruments are designated as a hedge of a portion of the cash flows received for each of a number of deliveries of a specific aircraft type that are expected to occur in a given month and hence will allow the hedge result to move along with the hedged deliveries in the event of a shift in deliveries.

If such a shift in hedged deliveries occurs, hedge ineffectiveness will arise to the extent the maturities of the hedging instrument and the expected timing of the hedged cash flows are no longer perfectly aligned. In order to minimise such ineffectiveness the Company will close the timing gap by rolling over hedges to new maturities, using foreign exchange swap contracts.

In addition, the Company will designate the risk of changes in the spot element as the hedged risk in order to eliminate the ineffectiveness resulting from changes in forward points between different maturities. The forward element will be accounted for as a cost of hedging similar to the time value of options.

Until 30 June 2018 the Company typically hedged firmly committed sales in US dollar using a "first flow approach". Under that approach, the foreign currency derivatives the Company entered into were designated as a hedge of the first US dollar inflows received from the customer at aircraft delivery in a given month. The strategy implied that only a portion of the expected monthly customer payments made at aircraft delivery were hedged and that a reduction of monthly cash inflows as a result of postponements or order cancellations had no impact on the effectiveness of the hedge as long as the actual gross US dollar cash inflows received at aircraft delivery in a particular month exceeded the portion designated as being hedged in that month. According to the prospective application requirement of IFRS 9, the fair values of the legacy portfolio in place at inception of the new strategy continue to be assigned to the previous first flow hedge regime and remain in the hedge reserve in OCI, to be recognised in profit or loss only at maturity of the originally hedged cash flows (unless those cash flows are no longer expected to occur).

As a result of prospective application, the hedging instruments designated under the new strategy had a non-zero fair value at hedge inception, which might create some small ineffectiveness.

Another source of ineffectiveness is the counterparty credit risk inherent in the hedge portfolio. As such, credit risk is absent from the hedged cash flows. However, since netting arrangements are in place with all the hedge counterparties and the Company has a policy of trading with investment grade counterparties only, the credit risk arising from its hedging instruments, and associated changes in credit risk, have historically been negligible and are expected to remain so.

AIRBUS - FINANCIAL STATEMENTS 2021 - 56

The Company also hedges its expected foreign currency exposure arising from US dollar or pound sterling cash outflows in the commercial aircraft business on a first outflow basis, though to a much lesser extent than US dollar cash inflows.

In military aircraft and non-aircraft businesses, the Company hedges inflows and outflows in foreign currencies from firmly committed or highly probable forecast sales and purchase contracts. Here, foreign currency derivatives are typically contracted in lower volumes; they may be accounted for using a first flow approach or are designated as hedges of specific agreed milestone payments. The amount of the expected flows to be hedged can cover up to 100% of the equivalent of the net US dollar exposure at inception. The coverage ratio considers the variability in the range of potential outcomes taking into account macroeconomic movements affecting spot rates and interest rates as well as the robustness of the commercial cycle.

In situations where the payment dates for hedged firmly committed cash flows are not fixed and subject to potentially significant delays, the Company may use rollover strategies, usually involving foreign exchange swaps.

For all foreign currency hedges of future cash flows which qualify for hedge accounting under IFRS 9, the Company uses the cash flow hedge model, which requires (i) recognising the effective portion of the fair value changes of the hedging derivatives in equity (within OCI) and (ii) recognising the effect of the hedge in profit or loss when the hedged cash flows affect profit or loss.

In addition, the Company hedges currency risk arising from financial assets or liabilities denominated in currencies other than the euro, including foreign currency receivable and payable accounts, as well as foreign currency denominated funding transactions or securities. The Company applies hedge accounting if a mismatch in terms of profit or loss recognition of the hedging instrument and hedged item would otherwise occur. Frequently, however, the currency-induced gains or losses of the hedging instrument and the hedged item match in terms of profit or loss recognition ("natural hedge"), so no hedge accounting is required. Sometimes such gains or losses may end up in different sections of the income statement (such as operating profit for the hedged item and financial result for the hedging instrument). If so, the Company may choose to present the gains or losses of both the hedging instrument and the hedged item in the same income statement line item if certain formal requirements are met.

As hedging instruments, the Company primarily uses foreign currency forwards, foreign currency options and to a minor extent non-derivative financial instruments. A hedge ratio of 1:1 is applied by the Company.

The Company also has foreign currency derivative instruments which are embedded in certain purchase contracts denominated in a currency other than the functional currency of any substantial party to the contract, principally in US dollar and pound sterling. If such embedded derivatives are required to be accounted for separately from the host purchase contract, related gains or losses are generally recognised in other financial result. However, if the embedded derivatives qualify for hedge accounting, the Company might choose to designate them as a hedging instrument in a hedge of foreign currency risk, in which case they are accounted for under the cash flow hedge model as described above.

Interest rate risk — The Company uses an asset-liability management approach with the objective to limit its interest rate risk. It undertakes to match the risk profile of its interest-bearing assets with those of its interest-bearing liabilities. The remaining net interest rate exposure is managed through several types of interest rate derivatives, such as interest rate swaps and interest rate futures contracts, in order to minimise risks and financial impacts.

The vast majority of related interest rate hedges qualify for hedge accounting, and most of them are accounted for under the fair value hedge model. As a result, both the fair value changes of these derivatives and the portion of the hedged items' fair value change that is attributable to the hedged interest rate risk are recognised in profit or loss, where they offset to the extent the hedge is effective.

A few interest rate swaps that have been entered into as a hedge of certain of the Company variable rate debt (see "– Note 36.3: Financing Liabilities") are accounted for under the cash flow hedge model. Related fair value gains are recognised in OCI and reclassified to profit or loss when the hedged interest payments affect profit or loss.

The Company has applied the relief introduced by the amendments made to IFRS 9 in September 2019 on hedge accounting, having the effect that the IBOR reform should not cause hedge accounting to terminate.

The Company invests in financial instruments such as overnight deposits, certificates of deposits, commercial papers, other money market instruments and short-term as well as medium-term bonds. For its financial instruments portfolio, the Company has an Asset Liability Management Committee in place that meets regularly and aims to limit the interest rate risk on a fair value basis through a value-at-risk approach, from which results a hedge ratio that is however not actively steered.

Commodity price risk — The Company is exposed to risk relating to fluctuations in the prices of commodities used in the supply chain. It manages these risks in the procurement process and to a certain extent uses derivative instruments in order to mitigate the risks associated with the purchase of raw materials. To the extent that the gains or losses of the derivative and those of the hedged item or transaction do not match in terms of profit or loss, the Company applies cash flow hedge accounting to the derivative instruments, with a hedge ratio of 1:1.

Equity price risk — The Company is to a small extent invested in equity securities mainly for operational reasons. Its exposure to equity price risk is hence limited. Furthermore, it is exposed under its LTIP to the risk of the Company share price increases. The Company limits these risks through the use of equity derivatives that qualify for hedge accounting and have been designated as hedging instruments in cash flow hedges, with a hedge ratio of 1:1.

Sensitivities of market risks — The approach used to measure and control market risk exposure of the Company's financial instrument portfolio is, amongst other key indicators, the value-at-risk model ("VaR"). The VaR of a portfolio is the estimated potential loss that will not be exceeded over a specified period of time (holding period) from an adverse market movement with a specified confidence level. The VaR used by the Company is based upon a 95% confidence level and assumes a five-day holding period. The VaR model used is mainly based on the so-called "Monte-Carlo-Simulation" method. The model generates a wide range of potential future scenarios for market price movements by deriving the relevant statistical behaviour of markets for the portfolio of market data from the previous two years and observed interdependencies between different markets and prices.

AIRBUS - FINANCIAL STATEMENTS 2021 - 57

The Company's VaR computation includes the Company's financial debt, short-term and long-term investments, foreign currency forwards, swaps and options, commodity contracts, finance lease receivables and liabilities, foreign currency trade liabilities and

receivables and contract assets.

Although VaR is an important tool for measuring market risk, the assumptions on which the model is based give rise to some limitations, including the following:

- a five-day holding period assumes that it is possible to hedge or dispose of positions within that period. This is considered to be a realistic assumption in almost all cases but may not be the case in situations in which there is severe market illiquidity for a prolonged period.
- a 95% confidence level does not reflect losses that may occur beyond this level. Even within the model used there is a 5% statistical probability that losses could exceed the calculated VaR.
- the use of historical data as a basis for estimating the statistical behaviour of the relevant markets and finally determining the possible range of future outcomes out of this statistical behaviour may not always cover all possible scenarios, especially those of an exceptional nature.

The Company uses VaR amongst other key figures in order to determine the riskiness of its financial instrument portfolio and in order to optimise the risk-return ratio of its financial asset portfolio. Further, its investment policy defines a VaR limit for the total portfolio of cash, cash equivalents and securities. The total VaR as well as the different risk-factor specific VaR figures of this portfolio are measured and serve amongst other measures as a basis for the decisions of the Company's Asset Liability Management Committee.

A summary of the VaR position of the Company financial instruments portfolio at 31 December 2021 and 2020 is as follows:

(In € million)	Total VaR	Equity price VaR	Currency VaR	Commodity price VaR	Interest rate VaR
31 December 2021					
Foreign exchange hedges for forecast transactions or firm commitments	910	0	945	0	173
Financing liabilities, financial assets (including cash, cash equivalents, securities and related hedges)	127	58	68	0	110
Finance lease receivables and liabilities, foreign currency trade payables and receivables	52	0	39	0	39
Commodity contracts	3	0	0	3	0
Equity swaps	5	0	0	0	0
Diversification effect	(162)	2	(125)	0	(169)
All financial instruments	935	60	927	3	153
31 December 2020					
Foreign exchange hedges for forecast transactions or firm commitments	837	0	838	0	87
Financing liabilities, financial assets (including cash, cash equivalents, securities and related hedges)	137	120	96	0	35
Finance lease receivables and liabilities, foreign currency trade payables and receivables	39	0	35	0	24
Commodity contracts	3	0	0	3	0
Equity swaps	4	4	0	0	0
Diversification effect	(214)	(1)	(201)	0	(54)
All financial instruments	806	123	768	3	92

The increase of the total VaR as of 31 December 2021 is mainly attributable to the increase of the foreign exchange portfolio. The equity risk decrease is due to a lower volatility of shares prices over the year.

The Company uses its derivative instruments entirely for hedging purposes. As a result, the respective market risks of these hedging instruments are – depending on the hedges' actual effectiveness – offset by corresponding opposite market risks of the underlying forecast transactions, assets or liabilities. Under IFRS 7, the underlying forecast transactions do not qualify as financial instruments and are therefore not included in the tables shown above. Accordingly, the VaR of the foreign exchange hedging portfolio in the amount of € 945 million (2020: € 838 million) cannot be considered as a risk indicator for the Company in the economic sense.

Liquidity Risk

The Company's policy is to maintain sufficient cash and cash equivalents at any time to meet its present and future commitments as they fall due. It manages its liquidity by holding adequate volumes of liquid assets and maintains a committed revolving credit facility (€ 6.0 billion as of 31 December 2021), the maturity of which has been extended to 21 October 2024, in addition to the cash inflow generated by its operating business. The Company continues to keep within its asset portfolio the focus on low counterparty risk. In addition, it maintains a set of other funding sources, and accordingly may issue bonds, notes and commercial papers or enter into security lending agreements. Adverse changes in the capital markets could increase its funding costs and limit its financial flexibility.

AIRBUS - FINANCIAL STATEMENTS 2021 - 58

Further, the management of the vast majority of the Company's liquidity exposure is centralised by a daily cash concentration process. This process enables it to manage its liquidity surplus as well as its liquidity requirements according to the actual needs of its subsidiaries. In addition, management monitors the Company's liquidity reserve as well as the expected cash flows from its operations.

The contractual maturities of the Company's financial liabilities, based on undiscounted cash flows and including interest payments, if applicable, are as follows:

(In € million)	Carrying amount	Contractual cash flows	< 1 year	1 year - 2 years	2 years - 3 years	3 years - 4 years	4 years - 5 years	> 5 years
31 December 2021								
Non-derivative financial liabilities	(25,387)	(27,962)	(12,072)	(1,000)	(1,539)	(1,095)	(2,381)	(9,875)
Derivative financial liabilities	(4,563)	(6,193)	(1,887)	(1,661)	(1,245)	(728)	(440)	(232)
Total	(29,950)	(34,155)	(13,959)	(2,661)	(2,784)	(1,823)	(2,821)	(10,107)
31 December 2020								
Non-derivative financial liabilities	(26,514)	(29,007)	(12,298)	(774)	(1,616)	(1,465)	(1,088)	(11,766)
Derivative financial liabilities	(2,817)	(2,420)	(955)	(712)	(659)	(79)	(11)	(4)
Total	(29,331)	(31,427)	(13,253)	(1,486)	(2,275)	(1,544)	(1,099)	(11,770)

Non-derivative financial liabilities included in the table above comprise financing liabilities as presented in "– Note 37.2: Carrying Amounts and Fair Values of Financial Instruments". Due to their specific nature, namely their risk-sharing features and uncertainty about the repayment dates, the European Governments' refundable advances, which amount to € -3,861 million at 31 December 2021 (€ -3,912 million at 31 December 2020) are not included.

Lease liabilities

The maturity analysis of lease liabilities, based on contractual undiscounted cash flows is as follows:

(In € million)	31 December
----------------	-------------

Not later than one year	(2024)	(2020)
Later than one year and not later than five years	(758)	(925)
Later than five years	(1,043)	(1,004)
Total undiscounted lease liabilities	(2,046)	(2,189)
Lease liabilities included in the statement of financial position	(1,736)	(1,798)
Current	(245)	(260)
Non-current	(1,491)	(1,538)

Credit Risk

The Company is exposed to credit risk to the extent of non-performance by either its customers (e.g. airlines) or its counterparts with regard to financial instruments or issuers of financial instruments for gross cash investments. However, it has policies in place to avoid concentrations of credit risk and to ensure that credit risk is limited.

As far as central treasury activities are concerned, credit risk resulting from financial instruments is managed by the Company. In order to ensure sufficient diversification, a credit limit system is used.

The Company monitors the performance of the individual financial instruments and the impact of market developments on their performance and takes appropriate action on foreseeable adverse development based on pre-defined procedures and escalation levels.

Sales of products and services are made to customers after having conducted appropriate internal credit risk assessment. In order to support sales, primarily at Airbus, Airbus Helicopters and ATR, the Company may agree to participate in customer financing, on a case-by-case basis either directly or through guarantees provided to third parties. In determining the amount and terms of the financing transaction, the Company takes into account the airline's credit rating and economic factors reflecting the relevant financial market conditions, together with appropriate assumptions as to the anticipated future value of the financed asset.

The booked amount of financial assets represents the maximum credit exposure. The credit quality of financial assets can be assessed by reference to external credit rating (if available) or internal assessment of customers' creditworthiness e.g. airlines by way of internal risk pricing methods. For further information relating to gross credit risk and impairment see "– Note 37.7: Impairment Losses".

37.2 Carrying Amounts and Fair Values of Financial Instruments

Financial instruments — The Company's financial assets mainly consist of cash, short to medium-term deposits and securities. Its financial liabilities include trade liabilities, obligations towards financial institutions, issued bonds and refundable advances from European Governments. All purchases and sales of financial assets are recognised on the settlement date according to market conventions.

Financial assets at amortised cost — This category comprises assets that are held for collection of contractual cash flows where those cash flows represent solely payments of principal and interest. It includes trade receivables.

AIRBUS - FINANCIAL STATEMENTS 2021 - 59

Financial assets at fair value through OCI — This category comprises:

- equity investments that are not held for trading. With the exception of dividends received, the associated gains and losses (including any related foreign exchange component) are recognised in OCI. Amounts presented in OCI are not subsequently transferred to profit or loss on derecognition of the equity investment nor in the event of an impairment;
- debt instruments where contractual cash flows are solely payments of principal and interest, and that are held both for sales and collecting contractual cash flows. Changes in their fair value other than impairment losses and foreign exchange gains and losses on monetary items are recognised directly within AOCI. Upon disposal of such financial assets, the cumulative gain or loss previously recognised in equity is recorded as part of other income (other expenses) from investments in the Consolidated Income Statement for the period. Interest earned on the investment are presented as interest income in the Consolidated Income Statement using the effective interest method. Dividends earned on investment were recognised as other income (other expenses) from investments in the Consolidated Income Statement when the right to the payment had been established.

Financial assets at fair value through profit or loss — This category comprises all other financial assets (e.g. derivative instruments) that are to be measured at fair value (including equity investments for which the Company did not elect to present changes in fair value in OCI).

The Company assigns its financial instruments into classes based on their balance sheet category.

The following table presents the carrying amounts and fair values of financial instruments by class and by IFRS 9 measurement category as of 31 December 2021:

(In € million)	Fair value through profit or loss	Fair value through OCI	Financial assets and liabilities at amortised cost		Financial instruments total	
			Amortised cost	Fair value	Book value	Fair value
Assets						
Other investments and other long-term financial assets						
Equity investments ⁽¹⁾	1,033	1,478	0	0	2,511	2,511
Customer financing	118	0	0	0	118	118
Other loans ⁽²⁾	0	0	1,909	1,909	1,909	1,909
Trade receivables	0	0	5,063	5,063	5,063	5,063
Contract assets	0	0	1,404	1,404	1,404	1,404
Other financial assets						
Derivative instruments	1,005	0	0	0	1,005	1,005
Non-derivative instruments	0	0	1,137	1,137	1,137	1,137
Securities	0	8,111	0	0	8,111	8,111
Cash and cash equivalents	12,075	533	1,964	1,964	14,572	14,572
Total	14,231	10,122	11,477	11,477	35,830	35,830
Liabilities						
Financing liabilities						
Bonds and commercial papers	0	0	(11,061)	(11,886)	(11,061)	(11,886)
Liabilities to financial institutions and others	0	0	(2,243)	(2,243)	(2,243)	(2,243)
Finance lease liabilities ⁽²⁾	0	0	(1,736)	(1,736)	(1,736)	(1,736)
Other financial liabilities						
Derivative instruments	(4,563)	0	0	0	(4,563)	(4,563)
European Governments' refundable advances ⁽³⁾	0	0	(3,861)	(3,861)	(3,861)	(3,861)

Trade receivables	0	(16)	(9,693)	(9,693)	(9,690)	(9,690)
Total	(4,563)	(16)	(29,248)	(30,073)	(33,827)	(34,652)

(1) Other than those accounted for under the equity method.

(2) The carrying amounts are used as reasonable fair value approximations.

(3) The European Governments' refundable advances of € -3,861 million are measured at amortised cost. Fair values cannot be reliably measured because their risk sharing nature and the uncertainty of the repayment dates give rise to a broad range of reasonable fair value estimates and make it impossible to reasonably assess the probabilities of the various estimates within the range. This may change and reliable fair value measures become available as the related programmes approach the end of production.

AIRBUS - FINANCIAL STATEMENTS 2021 - 60

The following table presents the carrying amounts and fair values of financial instruments by class and by IFRS 9 measurement category as of 31 December 2020:

(In € million)	Fair value through profit or loss	Fair value through OCI	Financial assets and liabilities at amortised cost		Financial instruments total	
			Amortised cost	Fair value	Book value	Fair value
Assets

Others	0	0	(697)	(697)	(697)	(697)
Trade liabilities	0	0	(8,722)	(8,722)	(8,722)	(8,722)
Total	(2,817)	0	(30,426)	(31,316)	(33,243)	(34,133)

(1) Other than those accounted for under the equity method.

(2) The carrying amounts are used as reasonable fair value approximations.

(3) The European Governments' refundable advances of € -3,912 million are measured at amortised cost. Fair values cannot be reliably measured because their risk sharing nature and the uncertainty of the repayment dates give rise to a broad range of reasonable fair value estimates and make it impossible to reasonably assess the probabilities of the various estimates within the range. This may change and reliable fair value measures become available as the related programmes approach the end of production.

Fair Value Hierarchy

Fair value of financial instruments — The fair value of quoted investments is based on current market prices. If the market for financial assets is not active, or in the case of unlisted financial instruments, the Company determines fair values by using generally accepted valuation techniques on the basis of market information available at the end of the reporting period. Derivative instruments are generally managed on the basis of the Company's net exposure to the credit risk of each particular counterparty and fair value information is provided to the Company's key management personnel on that basis. For these derivative instruments, the fair value is measured based on the price that would be received to sell a net long position, or transfer a net short position, for a particular credit risk exposure as further described below.

Depending on the extent the inputs used to measure fair values rely on observable market data, fair value measurements may be hierarchised according to the following levels of input:

- Level 1: quoted prices (unadjusted) in active markets for identical assets and liabilities;
- Level 2: inputs other than quoted prices that are observable for the asset or liability – fair values measured based on Level 2 input typically rely on observable market data such as interest rates, foreign exchange rates, credit spreads or volatilities;
- Level 3: inputs for the asset or liability that are not based on observable market data – fair values measured based on Level 3 input rely to a significant extent on estimates derived from the Company's own data and may require the use of assumptions that are inherently judgemental and involve various limitations.

The fair values disclosed for financial instruments accounted for at amortised cost reflect Level 2 input. Otherwise, the Company determines mostly fair values based on Level 1 and Level 2 inputs and to a lesser extent on Level 3 input.

AIRBUS - FINANCIAL STATEMENTS 2021 - 61

The following table presents the carrying amounts of the financial instruments held for the three levels of the **fair value hierarchy** as of 31 December 2021 and 2020, respectively:

(In € million)	2021				2020			
	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3	Total
Financial assets measured at fair value								
Equity Investments	1,808	0	703	2,511	1,780	0	465	2,245
Derivative instruments	0	1,005	0	1,005	0	4,424	0	4,424
Securities	8,111	0	0	8,111	6,968	0	0	6,968
Customer financing	0	0	118	118	0	0	237	237
Cash equivalents	12,075	533	0	12,608	9,654	512	0	10,166
Total	21,994	1,538	821	24,353	18,402	4,936	702	24,040
Financial liabilities measured at fair value								
Derivative instruments	0	(4,485)	(78)	(4,563)	0	(2,805)	(12)	(2,817)
Other financial liabilities	0	0	(16)	(16)	0	0	0	0
Total	0	(4,485)	(94)	(4,579)	0	(2,805)	(12)	(2,817)

The development of financial instruments of Level 3 is as follows:

(In € million)	Derivatives	Participations	Customer financing	Total	Written put	Commodity	Total
					options on NCI interests	swap agreements	
Balance at 1 January 2020	216	528	350	1,094	(1,014)	(20)	(1,034)
Business combination	0	0	0	0	0	0	0
Profit or loss	(216)	0	(113)	(329)	0	6	6
Equity	0	(63)	0	(63)	1,014	0	1,014
Settlements	0	0	0	0	0	2	2
Release	0	0	0	0	0	0	0
Balance at 31 December 2020	0	465	237	702	0	(12)	(12)
Business combination	0	0	0	0	0	0	0
Profit or loss	0	0	(119)	(119)	0	(95)	(95)
Equity	0	238	0	238	(16)	0	(16)
Settlements	0	0	0	0	0	29	29
Others	0	0	0	0	0	0	0
Balance at 31 December 2021	0	703	118	821	(16)	(78)	(94)

As at 31 December 2020, the fair value of the written put options on non-controlling interests ("NCI puts") relating to ACLP was nil, mainly reflecting the latest projections on funding needs, slower ramp-up phasing and market projections.

The Company has re-measured the written put options as at 31 December 2021 and the fair value amounts to € 16 million. The fair value of these NCI puts are derived from a discounted cash flow analysis using the latest operating plan and a projection over the lifetime of the A220 programme. In addition a post-tax WACC of 9.58% is used to discount the forecasted cash flows, taking into account the specificities of the programme (2020: 9.49%).

Financial Assets Designated at Fair Value through Profit or Loss

The following types of financial assets held at 31 December 2021 and 2020, respectively, are designated at fair value through profit or loss:

(In € million)	Nominal amount at initial recognition at	Fair value at	Nominal amount at initial recognition at	Fair value at
	31 December 2021	31 December 2021	31 December 2020	31 December 2020
Designated at fair value through profit or loss at recognition:				
Money market funds		12,075	9,654	9,654
Foreign currency funds of fixed income funds		2	2	2
Total		12,077	9,656	9,656

The Company manages these assets and measures their performance on a fair value basis.

Fair Value Measurement Method

The Company uses the following methods to measure fair values:

Equity instruments — The fair values of listed equity instruments reflect quoted market prices. For non-listed equity investments for which quoted market prices are not available, the Company determines the fair values using valuation methods such as net asset values, discounted cash flow method or a comparable valuation technique.

Customer financing assets and other loans — The carrying amounts reflected in the annual accounts are used as a proxy for fair value.

Contract assets, trade receivables and other receivables — The carrying amounts reflected in the annual accounts are used as reasonable estimates of fair value because of the relatively short period between the receivables' origination and their maturity.

Securities — The fair values of securities reflect their quoted market price at the end of the reporting period.

Cash and cash equivalents — include cash in hand, cash in banks, checks, fixed deposits as well as commercial papers and money market funds. The carrying amounts reflected in the annual accounts are used as reasonable estimates of fair value because of the relatively short period between the origination of the instrument and its maturity or due date. The fair value of commercial papers is determined based on Level 2 input by discounting future cash flows using appropriate interest rates. The fair values of money market funds are determined by reference to their quoted market price.

Derivatives — The fair value of derivatives with embedded options or floors (e.g. call or put) is calculated based on the discounted cash flow method. The valuation is based on observable market data such as currency rates, currency forward rates, interest rates and yield curves, commodity forward prices as well as price and rate volatilities obtained from recognised vendors of market data. Furthermore, to the extent that these instruments are subject to master netting arrangements and similar agreements and managed on the basis of net credit exposure, their fair values reflect credit and debit value adjustments based on the net long or net short position that the Company has with each counterparty. Except for certain short-term commodity contracts and derivatives presented in the Level 3 section above, derivative fair values are measured based on Level 2 input.

Financing liabilities — The fair values disclosed for financing liabilities, other than those of issued bonds and commercial papers, are determined based on Level 2 input by discounting scheduled or expected cash flows using appropriate market interest rates. The fair values disclosed for the issued EMTN and US dollar bonds reflect public price quotations that qualify as Level 1 input. For issued commercial papers, the carrying amounts reflected in the annual accounts are used as reasonable estimates of fair value because of the relatively short period between the origination of these instruments and their maturity.

Trade liabilities and current other financial liabilities — For the same reason as trade receivables, carrying amounts are used as reasonable fair value approximations for trade liabilities and current other financial liabilities.

The following interest rate curves are used in the determination of the fair value in respect of the derivative financial instruments as of 31 December 2021 and 2020:

	31 December					
	2021		2020		2021	
(Rate in %)	€		US\$		£	
6 months	(0.49)	(0.45)	0.29	0.22	0.52	0.15
1 year	(0.48)	(0.40)	0.53	0.28	0.80	0.20
5 years	0.01	(0.49)	1.35	0.43	1.13	0.19
10 years	0.30	(0.29)	1.56	0.93	1.07	0.40

37.3 Potential Effect of Set-Off Rights on Recognised Financial Assets and Liabilities

The Company reports all its financial assets and financial liabilities on a gross basis. With each derivative counterparty there are master netting agreements in place providing for the immediate close-out of all outstanding derivative transactions and payment of the net termination amount in the event a party to the agreement defaults or another defined termination event occurs. Furthermore, securities lending transactions are accounted for as collateralised borrowings. As a result, the securities pledged as collateral continue to be recognised on the balance sheet and the amount of cash received at the outset of the transaction is separately recognised as a financial liability. The following tables set out, on a counterparty specific basis, the potential effect of master netting agreements and collateralised borrowings on the Company's Financial Position, separately for financial assets and financial liabilities that were subject to such agreements as of 31 December 2021 and 2020, respectively:

(In € million)	Gross amounts recognised	Gross amounts recognised set off in the Financial Statements	Net amounts presented in the Financial Statements	Related amounts not set off in Statement of Financial Position		Net amount
				Financial instruments	Cash collateral received	
31 December 2021						
Financial asset	802	0	802	(788)	0	14
Financial liabilities	4,156	0	4,156	(788)	0	3,368
31 December 2020						
Financial asset	3,879	0	3,879	(1,519)	(77)	2,283
Financial liabilities	2,192	0	2,192	(1,519)	0	673

AIRBUS - FINANCIAL STATEMENTS 2021 - 63

37.4 Notional Amounts of Derivative Financial Instruments

The contract or notional amounts of derivative financial instruments shown below do not necessarily represent amounts exchanged by the parties and, thus, are not necessarily a measure for the exposure of the Company through its use of derivatives.

The notional amounts of **foreign exchange derivative financial instruments** are as follows, specified by year of expected maturity:

(In € million)	Remaining period						
	1 year	2 years	3 years	4 years	5 years	> 5 years	Total
31 December 2021							
Net forward and swap contracts	21,225	17,923	17,102	10,899	8,161	7,233	82,543
Foreign exchange options	0	0	0	0	0	0	0
31 December 2020							
Net forward sales contracts	15,609	12,308	10,427	8,716	6,685	14,791	68,536
Foreign exchange options	0	0	0	0	0	0	0

The following table sets out the notional amount of foreign exchange hedges in place as of 31 December 2021 relating to the commercial activities of Airbus, and the average euro converted rates applicable to corresponding EBIT.

(In \$ million)	2022	2023	2024	2025	2026+	Total
Total hedges	21,559	19,318	18,530	11,833	17,100	88,340
Forward rates						
€/US\$	1.22	1.23	1.24	1.26	1.32	1.25
£/US\$	1.36	-(1)	-(1)	-	-	1.36

(1) Related volumes for the years 2023 and 2024 are remote.

In 2021 new hedge contracts of US\$ 29.5 billion (2020: US\$ 4.5 billion) were added at an average rate of 1.21 US\$/€ (2020: 1.17 US\$/€).

As of 31 December 2021, the total hedge portfolio with maturities up to 2028 amounts to US\$ 88.3 billion (2020: US\$ 81.0 billion) and covers a major portion of the foreign exchange exposure expected over the hedging horizon. The average US\$/€ hedge rate of the US\$/€ hedge portfolio until 2028 amounts to 1.25 US\$/€ (2020: 1.26 US\$/€).

(In £ million)	2022	2023	2024	2025	2026+	Total
Total hedges	891	770	674	407	273	3,015
Forward rates						
€/£	0.87	0.88	0.89	0.90	0.91	0.88

During the course of the year 2021, €/£ hedges were implemented in order to cover the GBP exposure of the Company.

The notional amounts of **interest rate contracts** are as follows:

Remaining period

	1 year	2 years	3 years	4 years	5 years	6 years	7 years	> 7 years	Total
31 December 2021									
Interest rate contracts	12	0	1,000	750	1,850	1,324	750	4,650	10,336
Interest rate future contracts	0	0	0	0	0	0	0	0	0
31 December 2020									
Interest rate contracts	109	0	815	1,000	0	600	1,222	1,400	5,146
Interest rate future contracts	0	0	0	0	0	0	0	0	0

Please also refer to "– Note 36.3: Financing Liabilities".

The notional amounts of **commodity contracts** are as follows:

(In € million)	Remaining period					Total
	1 year	2 years	3 years	4 years	> 4 years	
31 December 2021	20	21	3	0	0	44
31 December 2020	25	22	11	3	0	61

The notional amounts of **equity swaps** are as follows:

(In € million)	Remaining period					Total
	1 year	2 years	3 years	4 years	> 4 years	
31 December 2021	18	17	18	10	0	63
31 December 2020	32	23	17	8	0	80

AIRBUS - FINANCIAL STATEMENTS 2021 - 64

37.5 Derivative Financial Instruments and Hedge Accounting Disclosure

The following table presents the **reconciliation of AOCI**, net of tax, resulting from cash flow hedge accounting as of 31 December 2021 and 31 December 2020:

(In € million)	31 December	
	2021	2020
	Hedge reserve	
Opening balance	(262)	2,521
Foreign exchange contracts	5,279	(3,161)
Others	12	(111)
Changes in fair values	5,291	(3,272)
Foreign exchange contracts	(64)	(484)
Others	(3)	6
Amount reclassified to profit or loss (matured hedges)	(67)	(478)
Foreign exchange contracts	(106)	55
Others	1	(4)
Amount classified to profit or loss (inefficiency)	(105)	51
Tax impact	(1,409)	916
Closing balance	3,448	(262)

The following table presents the amounts relating to **items designated as hedging instruments and hedge ineffectiveness** for cash-flow hedges as of 31 December 2021:

(In € million)	Carrying values		OCI		Hedge inefficiency recorded in financial result	Amounts reclassified from recorded in hedge reserve to profit or loss
	Asset	Liability	Changes in values of the hedging instrument	Other changes in value of the hedge reserve		
Foreign currency risk						
Net forward sales contracts	637	(4,092)	5,349	(72)	(106)	(64)

Total	3,870	(2,588)	(6,197)	2,925	51	(478)

37.6 Net Gains or Net Losses

The Company's net gains or net losses recognised in profit or loss in 2021 and 2020, respectively, are as follows:

(In € million)	2021	2020
Financial assets or financial liabilities at fair value through profit or loss		
Held for trading	404	(117)
Designated on initial recognition	188	(277)
Financial assets at amortised cost	283	(598)
Financial assets at fair value through OCI (previously available-for-sale)	20	75
Financial liabilities measured at amortised cost	(700)	266

Net losses of € -218 million (2020: € -194 million) are recognised directly in equity relating to financial assets at fair value.

Interest income from financial assets or financial liabilities through profit or loss is included in net gains or losses.

37.7 Impairment Losses

Loss allowances — For its portfolio of debt instruments including bonds, term deposits and commercial papers, the Company measures loss allowances at an amount that represents credit losses resulting from default events that are possible within the next 12 months, unless the credit risk on a financial instrument has increased significantly since initial recognition. In the event of such significant increase in credit risk the Company measures loss allowances for that financial instrument at an amount equal to its life-time expected losses, *i.e.* at an amount equal to the expected credit losses that result from all possible default events over the expected life of that financial instrument.

The Company applies the low credit risk exemption allowing the Company to assume that there is no significant increase in credit risk since initial recognition of a financial instrument, if the instrument is determined to have low credit risk at the reporting date. Similarly, the Company has determined that its trade receivables and contract assets generally have low credit risk. The Company applies the simplified approach permitted by IFRS 9 of measuring expected credit losses of trade receivables and contract assets on a lifetime basis from initial recognition.

Investment grade instruments — The Company considers a significant increase in credit risk to have occurred, if there is a downgrade by four notches such that the instrument moves into a high yield bucket as a direct result of the downgrade. With respect to instruments that were high yield at initial recognition, a downgrade by four notches is considered as a significant increase in credit risk.

(In € million)	Stage 1	Stage 2	Stage 3	Total
	12-month ECL	Life-time ECL	Credit impaired ECL	
At 1 January 2021	8.09	18.26	23.42	49.77
Change in financial assets	1.91	(2.17)	(1.77)	(2.03)
Change in risk parameters	2.08	4.65	(2.88)	3.85
At 31 December 2021	12.08	20.74	18.77	51.59

(In € million)	Stage 1	Stage 2	Stage 3	Total ⁽¹⁾
	12-month ECL ⁽¹⁾	Life-time ECL ⁽¹⁾	Credit impaired ECL ⁽¹⁾	
At 1 January 2020	5.25	2.86	9.14	17.25
Change in financial assets	3.09	87.40	14.28	104.77
Change in risk parameters	(0.25)	(72)	0	(72.25)
At 31 December 2020	8.09	18.26	23.42	49.77

(1) restated.

The following table breaks down the **gross carrying amount of loans and receivables** as of 31 December 2021 and 2020, separately showing those that are impaired, renegotiated or past due:

(In € million)	Not past due	Renegotiated/ not past due/ not impaired	Gross impaired	Past due ≤ 3 months	Past due > 3 and ≤ 6 months	Past due > 6 and ≤ 9 months	Past due > 9 and ≤ 12 months	Past due > 12 months	Impairment	Total
Trade receivables	3,518	3	356	485	135	220	72	635	(361)	5,063
Contract assets	1,406	0	0	0	0	0	0	0	(2)	1,404
Others	2,301	3	248	68	122	12	29	464	(187)	3,060
Total	7,225	6	604	553	257	232	101	1,101	(551)	9,528

31 December 2020										
Trade receivables	4,302	0	172	358	117	119	92	277	(305)	5,132
Contract assets	1,123	0	0	0	0	0	0	0	(1)	1,122
Others	2,396	4	431	302	130	23	10	366	(156)	3,506
Total	7,821	4	603	660	247	142	102	643	(462)	9,760

The management believes that the unimpaired amounts that are past due are still collectible in full, based on historic payment behaviour and analysis of customer credit risk, including underlying customers' credit ratings if they are available.

The following impairment losses on financial assets are recognised in profit or loss in 2021 and 2020, respectively: (In € million)	2021	2020
Other loans	0	(143)
Trade receivables	(83)	(71)
Contract assets	(1)	0
Total	(84)	(214)

2.8 Other Notes

38. Litigation and Claims

Litigation and claims — Various legal actions, governmental investigations, proceedings and other claims are pending or may be instituted or asserted in the future against the Company. Litigation is subject to many uncertainties, and the outcome of individual matters is not predictable with certainty. Provisions have been accounted for in accordance with IFRS criteria. It is reasonably possible that the final resolution of some of these matters may require the Company to make expenditures, in excess of established provisions over an extended period of time and in a range of amounts that cannot be reasonably estimated. The term "reasonably possible" is used herein to mean that the chance of a future transaction or event occurring is more than remote but less than likely.

The Company is involved from time to time in various governmental, legal and arbitration proceedings in the ordinary course of its business, the most significant of which are described below. Other than as described below, the Company is not aware of any material governmental, legal or arbitration proceedings (including any such proceedings which are pending or threatened) which may have or have had in the recent past significant effects on Airbus SE's or the Company's Financial Position or profitability.

If the Company concludes that the disclosures relative to contingent liabilities can be expected to prejudice seriously its position in a dispute with other parties, the Company limits its disclosures to the nature of the dispute.

Investigation by the UK SFO, France's PNF, US Departments of State and Justice and Related Commercial Litigation

The Company reached final agreements ("the agreements") with the French Parquet National Financier ("PNF"), the UK Serious Fraud Office ("SFO"), and the US Department of Justice ("DoJ") resolving the authorities' investigations into allegations of bribery and corruption, as well as with the US Department of State ("DoS") and the DoJ to resolve their investigations into inaccurate and misleading filings made with the DoS pursuant to the US International Traffic in Arms Regulations ("ITAR"). The agreements were approved and made public on 31 January 2020.

Under the terms of the agreements, the Company agreed to pay penalties of €3,597,766,766 plus interest and costs to the French, UK and US authorities. This was recognised in the Company's 2019 accounts. The settlements with each authority were as follows: PNF €2,083,137,455, the SFO €983,974,311, the DoJ €526,150,496 and the DoS €9,009,008 of which €4,504,504 may be used for approved remedial compliance measures. All penalties have been paid.

Under the terms of the Convention judiciaire d'intérêt public ("CJIP") with the PNF, the Company has an obligation to submit its compliance programme to targeted audits carried out by the Agence Française Anticorruption ("AFA") over a period of three years.

Under the terms of the Deferred Prosecution Agreement ("DPA") with the SFO, no independent compliance monitor will be imposed on the Company in light of the continuing mentorship to be conducted by the AFA.

Under the terms of the DPA with the DoJ, no independent compliance monitor will be imposed on Airbus under the agreement with the DoJ, but the Company will periodically report on its continuing compliance enhancement progress during the three year term of the DPA and carry out further reviews as required by the DoJ.

The agreements result in the suspension of prosecution for a duration of three years whereupon the prosecutions will be extinguished if the Company complies with their terms throughout the period.

AIRBUS - FINANCIAL STATEMENTS 2021 - 67

Under the terms of the Consent Agreement with the DoS, the DoS has agreed to settle all civil violations of the ITAR outlined in the Company's voluntary disclosures identified in the Consent Agreement, and the Company has agreed to retain an independent export control compliance officer, who will monitor the effectiveness of the Company's export control systems and its compliance with the ITAR for a duration of three years.

Any breach of the terms of the agreements by the Company could lead to rescission by the authorities of the terms of the agreements and reopening of the prosecutions. Prosecution could result in the imposition of further monetary penalties or other sanctions including additional tax liability and could have a material impact on the Financial Statements, business and operations of the Company.

In addition to any pending investigation in other jurisdictions, the factual disclosures made in the course of reaching the agreements may result in the commencement of additional investigations in other jurisdictions. Such investigations could also result in (i) civil claims or claims by shareholders against the Company, (ii) adverse consequences on the Company's ability to obtain or continue financing for current or future projects, (iii) limitations on the eligibility of group companies for certain public sector contracts, and/or (iv) damage to the Company's business or reputation via negative publicity adversely affecting the Company's prospects in the commercial market place.

Airbus will continue to cooperate with the authorities in the future, pursuant to the agreements and to enhance its strong Ethics & Compliance culture within the Company.

Several consultants and other third parties have initiated commercial litigation and arbitration against the Company seeking relief. The agreements reached with authorities may lead to additional commercial litigation and arbitration against the Company and tax liability in the future, which could have a material impact on the Financial Statements, business and operations of the Company.

Securities Litigation

In August 2020, a putative class action lawsuit was filed in US federal court in the state of New Jersey against Airbus SE and members of its current and former management. The Company was served with the complaint in the fourth quarter of 2021. The lawsuit was brought on behalf of alleged shareholders that purchased or otherwise acquired Airbus SE securities in the US between 24 February 2016 and 30 July 2020, and asserts violations of US securities laws. The complaint alleges that defendants made false and misleading statements or omissions concerning, among other things, the Company's agreements approved on 31 January 2020 with the French PNF, the UK SFO, the US DoJ and the US DoS as well as the Company's historic practices regarding the use of third party business partners and anti-corruption compliance. The lawsuit seeks unquantified damages.

In addition, the Company received notification in August 2021 of two separate claims alleging similar facts as the US class action. Two claims have been filed in the Netherlands purportedly on behalf of Airbus investors.

The first Dutch claim was filed in August 2021 by a special purpose vehicle incorporated under the laws of Guernsey, an assignee purportedly representing numerous private shareholders and institutional investors, seeking a declaratory judgment with damages to be assessed in follow on proceedings. This claim is now pending before the Amsterdam District Court.

The second Dutch claim was filed in December 2021 following a demand letter sent by a foundation incorporated under the laws of the Netherlands, a purported representative of unnamed institutional and retail investors worldwide, starting a class action against the Company before the Dutch courts. This second Dutch claim targets the Company, certain of the Company's current and former directors and officers, and the Company's current and former auditors. A procedural hearing is scheduled for the second quarter of 2022.

Both claims allege that the Company violated its reporting obligations by failing to adequately inform investors and providing false or misleading information about its use of intermediaries and alleged corrupt practices, its related financial exposure, internal investigations and subsequent measures taken by the Company, and related criminal investigations, which allegedly impacted the Company's share price.

The Company cannot exclude the possibility that additional claims are filed related to this subject matter attempting different theories of recovery in the same or different jurisdictions.

The Company believes it has solid grounds to defend itself against the allegations. The consequences of such litigation and the outcome of the proceedings cannot be fully assessed at this stage, but any judgment or decision unfavourable to the Company could have a material adverse impact on the Financial Statements, business and operations of the Company.

AIRBUS - FINANCIAL STATEMENTS 2021 - 68

Air France Flight 447 Trial

On 1 June 2009, an A330 operated by Air France flight AF447 from Rio de Janeiro to Paris disappeared over the Atlantic Ocean with 228 persons onboard. The wreckage was located in April 2011 after several search campaigns organised by the Bureau d'Enquêtes et d'Analyses (BEA), which published its final investigation report in July 2012. In the wake of the accident, the prosecutor in Paris opened an investigation for involuntary manslaughter and Airbus SAS was charged in March 2011. In September 2019, the investigating magistrates closed the investigation and dismissed all criminal charges after a thorough analysis of the technical and legal elements of the case. However, the Paris Court of Appeal overturned the magistrates' decision and ordered trial for involuntary manslaughter. The Company's appeal to the French Supreme Court has been dismissed. The trial is scheduled to take place in the fourth quarter of 2022. The criminal trial in the Paris Criminal Court and any judgment or decision unfavourable to the Company could result in damage to its business or reputation.

Qatar Airways Commercial Litigation

Citing surface degradation on some of its A350 fleet and alleging an underlying "design defect", Qatar Airways filed a legal claim against the Company in the London Commercial Court on 17 December 2021. The claim seeks (a) liquidated damages for aircraft grounded by the Qatar Civil Aviation Authority, (b) an order that Airbus must deliver a full root cause analysis for surface degradation issues, and (c) a declaration by the court that Airbus may not deliver any further A350 aircraft to Qatar Airways until alleged "design defects" are cured. The Company rejects Qatar Airways' mischaracterisation of the non-structural surface degradation and the attendant grounding of the aircraft, which underpin the claim. Accordingly, the Company will defend itself vigorously in the proceedings. The consequences of such litigation and the outcome of the proceedings cannot be fully assessed at this stage, but any judgment or decision unfavourable to the Company could have a material adverse impact on the Financial Statements, business and operations of the Company as well as its reputation.

Other Investigations

The Company is cooperating fully with the authorities in a judicial investigation in France related to Kazakhstan. In this spirit, the Company was interviewed by the investigating magistrates and has been granted the status of "assisted witness" in the investigation.

The Company is also cooperating fully with the authorities in a judicial investigation in France related to Libya. In this spirit, the Company has responded voluntarily to requests for information.

In 2019, the Company self-reported to German authorities potentially improper advance receipt and communication of confidential customer information by employees of Airbus Defence and Space GmbH. The information concerned relates to future German government procurement projects. The self-disclosure by the Company followed an internal review with the support of an external law firm. Both the German Ministry of Defence and the Munich public prosecutor opened an investigation into the matter. The investigation could have an impact on Airbus Defence and Space GmbH's and Airbus Secure Land Communications GmbH's ability to participate in future public procurement projects in Germany. In 2021 the Munich prosecution issued a penalty notice against Airbus Defence and Space GmbH for € 10 million for negligent violation of supervisory duties in connection with this matter. The Company continues to fully cooperate with relevant authorities.

39. Auditor Fees

With reference to Section 2:382a (1) and (2) of the Netherlands Civil Code, the following fees for the financial year 2021 have been charged by EY to the Company, its subsidiaries and other consolidated entities:

<i>(In € thousand)</i>	2021	2020
Audit of the Financial Statements	10,265	11,386
Other audit engagements	284	308
Tax services	497	445
Other non-audit services	257	447
Total	11,303	12,586

Other audit firms have audit fees related to audit process, certification and examination of individual and consolidated accounts of € 5 million in 2021 (2020: € 5 million).

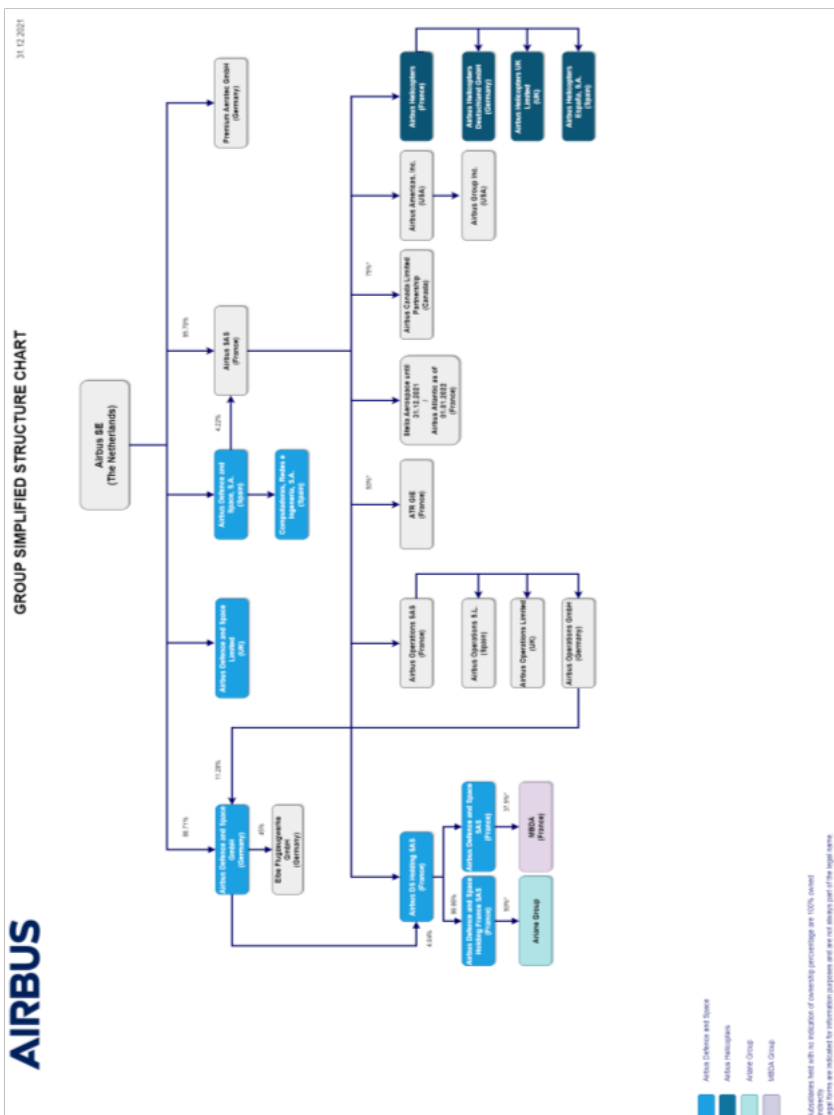

40. Events after the Reporting Date

Airbus Atlantic, a wholly-owned Airbus subsidiary, was officially established on 1 January 2022. The new company groups the strengths, resources and skills of Airbus's sites in Nantes and Montoir-de-Bretagne, the central functions associated with their activities, as well as the STELIA Aerospace sites worldwide.

This unification is part of the transformation project announced in April 2021, aimed at strengthening the value chain of aerospace assembly within Airbus's industrial setup.

In addition, the Company has now reached a preliminary understanding concerning the establishment of a new aerospace assembly company in Germany, as well as the future of the Detail Parts and sub-assembly activities at Premium AEROTEC. Some of the aerospace assembly of aircraft fuselages, currently spread across the company and subsidiaries, could be merged and fully integrated into the Company as a core activity on 1 July 2022.

Notes to the IFRS Company Financial Statements

4.1 Basis of Presentation

1. The Company

The Company's principal activity is acting as a holding and management company for the subsidiaries of **Airbus SE**, the "Company", a listed company in the form of a European public limited-liability company (Societas Europaea), legally seated in Amsterdam (current registered office at Mendelweg 30, 2333 CS Leiden, The Netherlands) and registered at the Dutch Commercial Register (Handelsregister) in The Hague under number 24288945. The Company is listed on the European stock exchanges in Paris, Frankfurt am Main, Madrid, Barcelona, Valencia and Bilbao. The IFRS Financial Statements were authorised for issue by the Company's Board of Directors on 16 February 2022.

2. Impact of the COVID-19 pandemic

Regarding the impact of the COVID-19 pandemic, please refer to Note 2 "Impact of the COVID-19 pandemic" of the Consolidated Financial Statements.

3. Significant Accounting Policies

Basis of preparation — The Company's Financial Statements are prepared in accordance with International Financial Reporting Standards ("IFRS"), issued by the International Accounting Standards Board ("IASB") as endorsed by the European Union ("EU") and with Part 9 of Book 2 of the Netherlands Civil Code. They are prepared and reported in euro ("€") and all values are rounded to the nearest million appropriately. Due to rounding, numbers presented may not add up precisely to the totals provided and percentages may not precisely reflect the absolute figures.

In the Company Financial Statements of Airbus SE, unless otherwise disclosed, the same accounting principles have been applied as set out in the Notes to the Consolidated Financial Statements, except for the valuation of the investments as presented under investments in subsidiaries and associates in the Company Financial Statements. These policies have been consistently applied to all years presented.

In the Company Financial Statements, the investments in subsidiaries and associates are recorded at acquisition cost. In the Company Income Statement, dividends received from investments are recorded as dividend income.

Due to this application, the Company equity and net result are not equal to the consolidated equity and net result. A reconciliation of the total shareholders' equity and profit for the period is presented in "– Note 13: Total Equity" to the Company Financial Statements.

The Company Financial Statements have been prepared on a historical cost basis, except for the equity instruments, securities and derivative instruments that have been measured at fair value.

Regarding the application of new, revised or amended IFRS issued and applying from 1 January 2021 and issued but not yet applied please refer to "– Note 5: Change in Accounting Policies and Disclosures" of the Consolidated Financial Statements.

In addition, no material changes are expected in the Company Financial Statements of Airbus SE from the implementation of the new standards not yet applied. Further information about Share-based payment and Employee Stock Ownership Plans (ESOP) is presented in Note 33 and information about Remuneration is presented in Note 34 of the Consolidated Financial Statements.

A number of new or revised standards, amendments and improvements to standards as well as interpretations are not yet effective for the year ended 31 December 2021 and have not been applied in preparing these Financial Statements and early adoption is not planned:

Standards and amendments	IASB effective date for annual reporting periods beginning on or after	Endorsement status
Amendments to IFRS 3: Reference to the Conceptual Framework	1 January 2022	Endorsed
Amendments to IAS 16: Property, Plant and Equipment – Proceeds before Intended Use	1 January 2022	Endorsed
Amendments to IAS 37: Onerous Contracts – Cost of Fulfilling a Contract	1 January 2022	Endorsed
Annual Improvements to IFRS Standards 2018–2020	1 January 2022	Endorsed
IFRS 17 “Insurance Contracts”	1 January 2023	Endorsed
Amendments to IAS 1: Classification of Liabilities as Current or Non-current	1 January 2023	Not yet endorsed
Amendments to IAS 8: Definition of Accounting Estimates	1 January 2023	Not yet endorsed
Amendments to IAS 1: Disclosure of Accounting Policies	1 January 2023	Not yet endorsed
Amendments to IAS 12: Deferred Tax related to Assets and Liabilities arising from a Single Transaction	1 January 2023	Not yet endorsed
Amendments to IFRS 17: Initial Application of IFRS 17 and IFRS 9 –Comparative Information	1 January 2023	Not yet endorsed

The information with regard to Capital Management is disclosed in Note 35, further information about Litigation and Claims refers to Note 38 and Events after the Reporting Date are disclosed in Note 40 of the Consolidated Financial Statements.

Unless reference is made to the accounting policies described in the Consolidated Financial Statements, the main accounting policies applied in the preparation of these Company Financial Statements are described in each accounting area. These accounting policies have been consistently applied to all financial years presented, unless otherwise stated.

4. Key Estimates and Judgements

The preparation of the Company Financial Statements requires the use of estimates and assumptions. In preparing these Financial Statements, management exercises its best judgement based upon its experience and the circumstances prevailing at that time. The estimates and assumptions are based on available information and conditions at the end of the financial period presented and are reviewed on an ongoing basis.

The details regarding the use of estimates and judgements are described in Note 4 “Key Estimates and Judgements” of the Consolidated Financial Statements.

Key accounting estimates and judgements affecting the assessment and measurement of impairment are included in Note 9 “Investments in Subsidiaries, Associates and Participations” of the Company Financial Statements.

5. Related Party Transactions

Key Management Personnel

The details regarding the compensation of key management personnel are described in Note 10 “Related Party Transactions” of the Consolidated Financial Statements.

Intercompany Transactions

A comprehensive exchange of internal services between the subsidiaries of a multinational corporation like Airbus SE is common practice. In its responsibility as holding company to manage its subsidiaries and to assist the business activities conducted by Airbus companies and its subsidiaries, Airbus SE applies transfer prices for its business activities in conformity with market levels and in accordance with national and international tax requirements (arm’s length principle).

The following table discloses the related party intercompany transactions in 2021 and 2020:

(In € million)	Sales of goods and services and other income	Purchases of goods and services and other expenses	Receivables at 31 December	Liabilities at 31 December	Loans granted / Other receivables due at 31 December	Loans received / Other liabilities due at 31 December	Hedge relationships receivables at 31 December	Hedge relationships payables at 31 December

2021								
Total transactions with subsidiaries	103	(314)	11,258	(29,369)	1,290	(591) ⁽¹⁾	4,140	(585)
Total transactions with associates	37	(1)	0	0	108	(1,410)	0	0
2020								
Total transactions with subsidiaries	3,825	(479)	11,617	(24,426)	1,366	(3,793)	945	(2,185)
Total transactions with associates	68	(1)	42	0	101	(1,144)	0	0

(1) due to the merge of Airbus Finance BV, the existing loans between Airbus SE and the subsidiary have been acquired and cancelled and the bonds of Airbus Finance BV from third parties have also been acquired (see "- Note 9: Investments in Subsidiaries, Associates and Participations")

For further information about granted guarantees to subsidiaries please refer to Note 11 "Commitments and Contingencies" of the Company Financial Statements.

For further information about the impairment and the expected credit losses on receivables, please refer to Note 15.7 "Impairment Losses" of the Company Financial Statements.

4.2 Company Performance

6. Total Operating Result

<i>(In € million)</i>	2021	2020
Operating income	53	3,757
Corporate services rendered to Airbus companies	53	3,757
Operating expenses	(113)	(159)
Service fees charged by Airbus companies	(50)	(50)
Administrative expenses	(63)	(109)
Income from investments	28	42
Dividends received from Airbus companies	17	42
Gain on disposal of investments	9	11
Expense from investments	(21)	(187)
Impairment	9	(187)
Total operating result	(53)	3,454

Corporate services rendered to Airbus companies decreased by € 3,704 million to € 53 million (2020: € 3,757 million), mainly due to the agreement in 2020 with Airbus companies regarding the recharge of the penalties due to the French, UK and US authorities.

AIRBUS - FINANCIAL STATEMENTS 2021 - 9

7. Total Financial Result

<i>(In € million)</i>	2021	2020
Interest result	(94)	(48)
Interest income from securities measured at fair value through OCI	28	53
Interest income (expenses) from securities measured at fair value through P&L	(20)	3
Interest income on financial assets measured at amortised cost	55	86
Interest expense on financial liabilities measured at amortised cost	(157)	(190)
Other financial result	32	(249)
Option liability exchangeable bond	0	77
Change in fair value measurement of financial assets	9	57
Impairment and Expected Credit Loss	79	(224)
Other ⁽¹⁾	(104)	72
Total financial result	(62)	(297)

(1) Other includes various amounts such as foreign exchange result and bank fees

The Company is acting as a financial market agent on behalf of its subsidiaries, therefore the fair value changes of derivatives are reported on a net basis.

In November 2019, Airbus SE made further capital contribution and loan into Proj BV. Based on the latest developments, a re-assessment of the Proj BV financial assets was performed in December 2020 leading to a decrease in the fair value of the equity investment by € 187 million recorded through Profit and Loss, and an impairment of the loan by € 127 million recorded through financial result.

In February 2021, a debt forgiveness has been signed with Proj BV and a loss of € 164 million has been recorded through Financial Result. The impairment of the loan has been released for € 158 million.

8. Income Taxes

The Company is tax registered in the Netherlands. The Company is heading a fiscal unity, which also includes Airbus Group Finance B.V. until 31 December 2021 (see "- Note 9: Investments in Subsidiaries, Associates and Participations), Airbus Defence and Space Netherlands B.V. and therefore the Company is severally and jointly liable for income tax liabilities of the fiscal unity as a whole.

Income taxes — The tax expense for the year comprises deferred tax. Tax is recognised in the Income Statement, except to the extent that it relates to items recognised directly in Other Comprehensive Income.

The amount of income tax included in the Income Statement is determined in accordance with the rules established by the tax authorities in the Netherlands, based on which income taxes are payable or recoverable.

Deferred tax assets and/or liabilities, arising from temporary differences between the carrying amounts of assets and liabilities and the tax base of assets and liabilities, are calculated using the substantively enacted tax rates expected to apply when they are realised or settled. Deferred tax assets are recognised if it is probable that they will be realised.

The expense for income taxes is comprised of the following:

(In € million)	2021	2020
Current tax income (expense)	0	0
Deferred tax income (expense)	1	(3)
Total	1	(3)

AIRBUS - FINANCIAL STATEMENTS 2021 - 10

The following table shows reconciliation from the theoretical income tax (expense) using the Dutch corporate tax rate to the reported income tax (expense):

(In € million)	2021	2020
Profit (loss) before income taxes	(115)	3,157
Corporate income tax rate	25.0%	25.0%
Expected income (expense) for income taxes	29	(789)
Effects from tax rate differentials / Change of tax rate	3	0
Non-taxable agreements reached with Airbus companies	0	901
Non-taxable income from investment and associates	18	(33)
Option liability exchangeable bond	0	19
Income from other companies within the fiscal unity	0	0
Impairment on investment and associates	34	(79)
Other non-deductible expenses and tax-free income	22	(22)
Changes in valuation allowances ⁽¹⁾	(105)	0
Reported income (expense) for income taxes	1	(3)

(1) Reassessment of recoverability of deferred tax assets based on future taxable profits

Deferred income taxes as of 31 December 2021 are related to the following assets and liabilities:

(In € million)	1 January 2021		Other movements		Movement through income statement	31 December 2021	
	Deferred tax assets	Deferred tax liabilities	OCI	Others	Deferred tax benefit (expense)	Deferred tax assets	Deferred tax liabilities
Securities	0	(41)	26	0	0	0	(15)
Financial instruments	4	0	0	0	11	15	
Net operating loss and tax loss carry forwards	10	0	0	0	(10)	0	0
Deferred tax assets (liabilities) before offsetting	14	(41)	26	0	1	15	(15)
Set-off	(14)	14	0	0	0	(15)	15
Net deferred tax assets (liabilities)	0	(27)	26	0	1	0	0

Deferred income taxes as of 31 December 2020 are related to the following assets and liabilities:

(In € million)	1 January 2020		Other movements		Movement through income statement	31 December 2020	
	Deferred tax assets	Deferred tax liabilities	OCI	Others	Deferred tax benefit (expense)	Deferred tax assets	Deferred tax liabilities
Securities	0	(50)	9	0	0	0	(41)
Financial instruments	0	(6)	0	0	10	4	0
Net operating loss and tax loss carry forwards	22	0	0	0	(12)	10	0
Deferred tax assets (liabilities) before offsetting	22	(56)	9	0	(2)	14	(41)

Net deferred tax assets (liabilities)	(22)	(34)	9	0	(2)	(14)	(24)
--	-------------	-------------	----------	----------	------------	-------------	-------------

Details of deferred taxes recognised cumulatively in equity are as follows:

<i>(In € million)</i>	31 December	
	2021	2020
Financial instrument at fair value through OCI	(15)	(41)
Total	(15)	(41)

AIRBUS - FINANCIAL STATEMENTS 2021 - 11

Deferred taxes on net operating losses ("NOLs"), trade tax loss carry forwards and tax credit carry forwards are:

<i>(In € million)</i>	31 December 31	
	2021	2020
NOL	292	38
Tax credit carry forwards	0	0
Tax effect	75	10
Valuation allowances	(75)	0
Deferred tax assets on NOLs and tax credit carry forwards	0	10

As of 1 January 2022, tax losses can be carried forward indefinitely but profits in one year which exceed € 1 million will only be offsettable for up to 50 per cent of that higher taxable profit against losses, minus an amount of € 1 million.

4.3 Operational Assets and Liabilities

9. Investments in Subsidiaries, Associates and Participations

<i>(In € million)</i>	Subsidiaries	Associates	Participations	Total
Balance at 1 January 2020	15,845	21	1,094	16,960
Additions	28	28	0	56
Disposals	(7)	0	0	(7)

Share-based payment (IFRS 2)	42	0	0	42
Fair value changes through Profit or Loss	0	0	(174)	(174)
Balance at 31 December 2020	15,721	49	920	16,690
Additions	550	0	0	550
Disposals	(3)	0	0	(3)
Impairment	(21)	0	0	(21)
Share-based payment (IFRS 2)	62	0	0	62
Fair value changes through Profit or Loss	0	0	57	57
Balance at 31 December 2021	16,309	49	977	17,334

Investments in Subsidiaries, Associated Companies and Participations

Investments in subsidiaries and associated companies are stated at cost, less impairment. Dividend income from the Company's subsidiaries and associated companies is recognised when the right to receive payment is established.

The participations are stated at fair value with changes in fair value recognised in Profit and Loss.

For the purpose of impairment testing all consolidated subsidiaries are allocated to cash generating units ("CGU") in a way they are monitored for internal management purposes. At each balance sheet date, the Company reviews whether there is an indication that a CGU to which its investments in subsidiaries and associated companies belong to are impaired.

An indication for impairment of the investments in subsidiaries and associated companies may include, respectively, management's downward adjustment of the strategic plan, a significant decrease in the share price of a publicly listed company or a significant decrease in future sales. Further indications for impairment of its investments may include other areas where observable data indicates that there is a measurable decrease in the estimated future cash flows. These determinations require significant judgement. In making this judgement, management evaluates, among other factors, the financial performance of and business outlook for its investments, including factors such as industry and sector performance, changes in technology and operational and financing cash flow.

If any indication for impairment exists, the recoverable amount of the investments is estimated in order to determine the amount, if any, of the impairment loss. An investment is impaired if its recoverable amount is lower than its carrying value. The recoverable amount is defined as the higher of an investment's fair value less costs of disposal and its value in use.

AIRBUS - FINANCIAL STATEMENTS 2021 - 12

The determination of the investment's value in use is based on calculations using pre-tax cash flow projections based on financial budgets approved by management covering a five-year period. Cash flows beyond the five-year period are extrapolated using estimated growth rates. The discounted cash flow method is used to determine the recoverable amount of a CGU to which its investments in subsidiaries and associated companies belong. The discounted cash flow method is particularly sensitive to the selected discount rates and estimates of future cash flows by management. Key assumptions used to determine the recoverable value of the CGU are the expected future labour expenses, future interest rates, future exchange rates to translate into euro the portion of future US dollar and pound sterling which are not hedged and the estimated growth rate of terminal values.

If the recoverable amount of an investment is estimated to be less than its carrying amount, the carrying amount of the investment is reduced to its recoverable amount. Any impairment loss is recognised immediately in the Income Statement.

Impairment losses recognised in prior periods shall be reversed only if there has been a change in the estimates or external market information used to determine the investment's recoverable amount since the last impairment loss was recognised. The recoverable amount shall not exceed the carrying amount that would have been determined had no impairment loss been recognised in prior years.

The annual impairment test performed in 2021 led to an impairment charge of € 21 million (2020: € 187 million).

Change of Investments in Subsidiaries and Associates

On 31 December 2021, Airbus SE merged with its wholly owned subsidiary Airbus Finance BV, under a universal title of succession. As a consequence, all assets and liabilities of the former Airbus Finance BV have been acquired by Airbus SE and recognized at book value, and a gain on the merger of € 10 million has been recorded through Profit and Loss.

On 16 December 2021, Airbus SE made a further capital contribution of € 500 million into Airbus Defence and Space GmbH.

On 21 September 2021, Airbus SE made a further capital contribution of € 21 million into Skytra Ltd.

During the year 2021, Airbus SE made further capital contributions into Airbus Ventures Fund II for a total amount of € 10 million (2020: € 15 million).

During the year 2021, Airbus SE made further capital contributions into Airbus Ventures Fund III for a total amount of € 18 million (2020: € 13 million). During the year 2021, new partner had invested into Airbus Venture Fund III for a total commitments of US\$ 10 million. Consequently, Airbus SE now holds 61.5% of Airbus Venture Fund.

In November 2020, Cobham plc / Advent International sold its part in Air Tanker consortium to the other investors who jointly exercise their pre-emption right on a pro-rata basis (€ 28 million). Consequently, Airbus SE now holds 46% in Air Tanker Holdings and 29% in Air Tanker Services.

During the year 2020, Airbus SE made further capital contributions into Airbus Ventures Fund II for a total amount of € 15 million (2019: € 26 million).

During the year 2020, Airbus SE made further capital contributions into Airbus Ventures Fund III for a total amount of € 13 million (2019: € 23 million). During the year 2020, new partner had invested into Airbus Venture Fund III for total commitments of US\$ 50 million. Consequently, Airbus SE now holds 66% of Airbus Venture Fund III (€ 7 million).

Current accounts Airbus companies ⁽¹⁾	11,239	11,167
Current financial assets	13,229	12,425
Total	17,549	16,194

(1) The receivables from subsidiaries include mainly transactions in connection with the cash pooling in Airbus SE. Terms and conditions are in agreement with the prevailing market environment.

31 December

<i>(In € million)</i>	2021	2020
Negative fair values of derivative financial instruments	2,836	2,023
Non-current financial liabilities	2,836	2,023
Negative fair values of derivative financial instruments	1,982	1,143
Current accounts Airbus companies ⁽¹⁾	30,756	25,527
Current financial liabilities	32,738	26,670
Total	35,574	28,693

(1) The liabilities to subsidiaries include mainly transactions in connection with the cash pooling in Airbus SE. Terms and conditions are in agreement with the prevailing market environment.

11. Commitments and Contingencies

Off-Balance Sheet Commitments

Airbus SE issued guarantees on behalf of Airbus companies in the amount of € 10,858 million (2020: € 8,181 million). The commitments of these companies to third parties mainly relate to their operating business as described in Note 20 "Property, Plant and Equipment", Note 27 "Sales Financing Transactions" and Note 37 "Financial Instruments" of the Group's Consolidated Financial Statements.

On 8 December 2015, Airbus SE entered into a partnership agreement to establish a corporate venture capital fund, dubbed Airbus Group Ventures, as well as a technology and business innovation center in Silicon Valley with a total commitment amount of US\$ 150 million. The remaining commitment is US\$ 10 million at 31 December 2021.

On 1 April 2019, Airbus SE entered into a partnership agreement with effective date 1 July 2019 to establish a venture capital fund, dubbed Airbus Ventures Fund III, with a total commitment amount of US\$ 100 million. The remaining commitment is US\$ 49 million at 31 December 2021.

In addition, the Company has two guarantees to cover its obligation towards the Scheme and the BAE Systems pension schemes. To mitigate its exposure, the first guarantee covers an amount up to GBP 1.25 billion for an unlimited period of time while the second one covers an uncapped amount terminating in 2046, respectively for the Scheme and the BAE Systems Pension Schemes.

AIRBUS - FINANCIAL STATEMENTS 2021 - 14

4.4 Employees

12. Number of Employees

The average number of the persons employed by the Company in 2021 was 1 (2020: 1). The employee is situated in the Netherlands.

4.5 Capital Structure and Financial Instruments

13. Total Equity

Airbus SE's shares are exclusively ordinary shares with a par value of € 1.00. The following table shows the development of the number of shares issued and fully paid:

<i>(In number of shares)</i>	2021	2020
Issued as at 1 January	784,149,270	783,173,115
Issued for ESOP	1,934,420	976,155
Issued as at 31 December	786,083,690	784,149,270
Treasury shares	(454,735)	(432,875)
Outstanding at 31 December	785,628,955	783,716,395
Authorised shares	3,000,000,000	3,000,000,000

Holders of ordinary shares are entitled to dividends and are entitled to one vote per share at general meetings of the Company.

Capital stock comprises the nominal amount of shares outstanding. The addition to capital stock represents the contribution for exercised options by employees of € 1,934,420 (in 2020: € 976,155) in compliance with the implemented Stock Option Plans and the Employee Stock Ownership Plans ("ESOP").

Share premium mainly results from contributions in kind in the course of the creation of the Company, cash contributions from the Initial Public Offering, capital increases and reductions due to the issuance and cancellation of shares.

Retained earnings include mainly the profit of the period and cash dividend payments to Airbus SE shareholders.

On 23 March 2020, the Company has decided the withdrawal of 2019 dividend proposal with cash value of € 1.4 billion in response to the COVID-19 pandemic (see "– Note 2: Impact of the COVID-19 pandemic"). For the fiscal year 2021, the Company's Board of Directors proposes a cash distribution payment of € 1.50 per share.

Legal reserves include:

- change from **financial assets at fair value** (see Note 15.2 "Carrying Amounts and Fair Values of Financial Instruments");
- change in fair value of derivatives designated as **cash flow hedges** (see Note 15.2 "Carrying Amounts and Fair Values of Financial Instruments").

According to Dutch law, the OCI is considered to be a Legal Reserve and therefore distribution is restricted.

Treasury shares represent the amount paid or payable for own shares held in treasury. During 2021, the number of treasury stock held by the Company increased to 454,735 compared to 432,875 as of 31 December 2020, mainly due to the share buybacks partly offset by vested shares in 2021 under LTIP 2017 (see "– Note 33: Share-based Payment" of the Consolidated Financial Statements). No shares were sold back to the market nor cancelled in 2021 (2020: 0 shares).

AIRBUS - FINANCIAL STATEMENTS 2021 - 15

Authorisations Granted by the Annual' General Meeting of Airbus SE Held on 14 April 2021

On 14 April 2021, the Annual General Meeting ("AGM") of the Company authorised the Board of Directors, for a period expiring at the AGM to be held in 2021, to issue shares and to grant rights to subscribe for shares in the Company's share capital for the purpose of:

- ESOPs and share-related LTIPs, provided that such powers shall be limited to an aggregate of 0.14% of the Company's authorised share capital (see "– Note 33: Share-Based Payment");
- funding the Company and its subsidiaries, provided that such powers shall be limited to an aggregate of 0.3% of the Company's authorised share capital (see "– Note 37.3: Financing Liabilities").

For each operation, such powers shall not extend to issuing shares or granting rights to subscribe for shares if there is no preferential subscription right and for an aggregate issue price in excess of € 500 million per share issuance.

Also on 14 April 2021, the AGM authorised the Board of Directors for an 18 months period to repurchase up to 10% of the Company's issued share capital at a price per share not less than the nominal value and not more than the higher of the price of the last independent trade and the highest current independent bid on the trading venues of the regulated market of the country in which the purchase is carried out.

Furthermore, the AGM authorised both the Board of Directors and the CEO, with powers of substitution, to establish the exact number of the relevant shares to be cancelled.

Reconciliation Consolidated to Company Equity and Net Income

The difference between the total shareholders' equity according to the Consolidated Financial Statements and Company's Financial Statements as at 31 December 2021 and 2020 is as follows:

<i>(In € million)</i>	2021	2020
Consolidated equity	9,466	6,445
OCI - Restatement of investments from Consolidated to Company Financial Statements	1,864	(1,731)
Retained Earnings - Restatement of investments from Consolidated to Company Financial Statements	(2,610)	4,683
Retained Earnings - Valuation investments at historical cost	1,487	1,487
Retained Earnings - Impairment of financial assets	(1,029)	(1,685)
Company's equity	9,178	9,199

The difference between the net income according to the Consolidated Financial Statements and Company's Financial Statements for the year ended 31 December 2021 and 2020 is as follows:

<i>(In € million)</i>	2021	2020
Consolidated net income	4,213	(1,133)
Income from investments according to Consolidated Financial Statements	(4,571)	4,668
Income from investments according to Company Financial Statements	17	42

AIRBUS - FINANCIAL STATEMENTS 2021 - 16

14. Cash, Securities and Financing Liabilities

14.1 Net Cash

<i>(In € million)</i>	31 December	
	2021	2020
Cash and cash equivalents	13,145	10,671
Current securities	1,245	1,592
Non-current securities	6,477	5,021
Gross cash position	20,867	17,284
Short-term financing liabilities	(591)	(1,156)
Long-term financing liabilities	(10,328)	(11,356)
Total	9,948	4,772

The net cash position on 31 December 2021 amounted to € 9,948 million (2020: € 4,772 million), with a gross cash position of € 20,867 million (2020: € 17,284 million).

14.2 Cash and Cash Equivalents

Cash and cash equivalents are composed of the following elements:

<i>(In € million)</i>	31 December	
	2021	2020
Bank account and petty cash	537	405
Short-term securities (at fair value through profit or loss)	12,075	9,654
Short-term securities (at fair value through OCI)	533	512
Short-term investment (at amortised cost)	0	100
Total cash and cash equivalents	13,145	10,671

Only securities with a maturity of three months or less from the date of the acquisition, that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value are recognised in cash equivalents.

The main variations are as follows:

Cash provided by operating activities amounted to € -119 million in 2021. See IFRS Company Statement of Cash Flows for the years ended 31 December 2021 and 2020.

Cash used for investing activities amounted to € -1,317 million, mainly reflecting the net investment in securities € 1,160 million.

Cash used for financing activities amounted to € 3,929 million and reflects the pre-payment of a US\$ 1 billion bond issued on 9 April 2013 and the repayment of the exchangeable bonds convertible into Dassault Aviation shares for an amount of € 1.0 billion. See “– Note 14.4 Financing Liabilities”.

14.3 Securities

<i>(In € million)</i>	31 December	
	2021	2020
Current securities at fair value through OCI	1,245	1,592
Non-current securities at fair value through OCI	6,477	5,021
Total securities	7,721	6,613

AIRBUS - FINANCIAL STATEMENTS 2021 - 17

The majority of the Company's securities consists of debt securities and are classified at fair value through OCI (see “– Note 37.2: Carrying Amounts and Fair Values of Financial Instruments” of the Consolidated Financial Statements).

The Company's securities portfolio amounts to € 7,721 million and € 6,613 million as of 31 December 2021 and 2020, respectively. The security portfolio contains a non-current portion of € 6,477 million (2020: € 5,021 million), and a current portion of € 1,245 million (2020: € 1,592 million).

Included in the securities portfolio as of 31 December 2021 and 2020, respectively, are corporate and government bonds bearing either fixed rate coupons (€ 7,497 million nominal value; 2020: € 6,357 million) or floating rate coupons (€ 50 million nominal value; 2020: € 50 million).

When the Company enters into securities lending or other financing activities that involve the pledging of securities as collateral, the securities pledged continue to be recognised on the balance sheet. As of 31 December 2021, securities for an amount of € 0 million were pledged as collateral for borrowings from banks (2020: € 99 million).

14.4 Financing Liabilities

Current and non-current classification – A financial asset or liability is classified as current if it is settled within 12 months after the reporting date, and as non-current otherwise.

Financing liabilities comprise obligations towards financial institutions, issued corporate bonds, and borrowing received from joint ventures and other parties.

Total		10,919	12,512				
Thereof non-current financing liabilities		10,328	11,356				
Thereof current financing liabilities		591	1,156				

(1) due to the merge of Airbus Finance BV, the existing loans between Airbus SE and the subsidiary have been acquired and cancelled and the bonds of Airbus Finance BV from third parties have also been acquired (see “- Note 9: Investments in Subsidiaries, Associates and Participations”)

Long-term financing liabilities, mainly comprising bonds and liabilities to financial institutions, decreased by € 1,028 million to € 10,328 million (2020: € 11,356 million), mainly due to pre-payment of a US\$1 billion bond issued on 9 April 2013 in the US institutional market with an original maturity of ten years.

Short-term financing liabilities decreased by € 565 million to € 591 million (2020: € 1,156 million), mainly due to the repayment of the exchangeable bonds to be convertible into Dassault Aviation shares issued on 14 June 2016 for an amount of € 1.0 billion and the repayment of the DBJ loan for an amount of US\$ 100 million. As part of Group-wide liquidity management, Airbus SE agreed on a repo transaction (€ 591 million) with Airbus Bank to increase flexibility and short-term borrowing capacity over year-end. Additionally, the transaction supports the lending capacity of Airbus Bank to the economy. This particularly benefits the Airbus ecosystem through increased lending to Airbus customers and suppliers.

Prior to 2021, the Company issued several euro-denominated bonds under its EMTN programme and three stand-alone US dollar-denominated bonds on the US institutional market under Rule 144A.

The Company can issue commercial papers under its € 11 billion Negotiable European Commercial Paper ("NEuCP") programme, its €4 billion Euro Commercial Paper ("ECP") programme and its \$ 3 billion US Commercial Paper programme.

AIRBUS - FINANCIAL STATEMENTS 2021 - 19

15. Information about Financial Instruments

15.1 Financial Risk Management

The Company acts as an intermediary for its subsidiaries when they wish to enter into derivative contracts to hedge against foreign exchange risk or other market risks such as interest rate risk, commodity price risk or equity price risk. The Company's practice is to set up a derivative contract with a subsidiary and at the same time enter into a back-to-back derivative transaction with a bank. Contracts with subsidiaries being thus mirrored (on a one-to-one basis) by contracts with banks, the Company's net exposure is virtually zero. There are, however, a few derivative contracts the Company holds in order to hedge its own market risk exposure.

As the Company's back-to-back hedge contracts are entered into with different counterparties, their fair values are reflected separately in the statement of Financial Position and recognised as other financial assets and financial liabilities as disclosed in Note 10 "Financial assets and liabilities" of the Company Financial Statements.

In the Income Statement, the results of the back-to-back hedge transactions, both realised and unrealised, are presented on a net basis as the Company acts as an agent for its subsidiaries.

The Company's overall financial risk management activities and their objectives are described in detail in section 37.1 "Financial Risk Management" of the Consolidated Financial Statements.

Market Risk

Foreign exchange risk — The Company manages a long-term hedge portfolio with maturities of several years for its subsidiaries, mainly Airbus, and to a small extent for its joint ventures or associates. This hedge portfolio covers a large portion of Airbus' firm commitments and highly probable forecast transactions. As explained above, owing to the Company's back-to-back approach, its own exposure to foreign exchange risk is very limited.

Interest rate risk — The Company uses an asset-liability management approach with the objective to limit its interest rate risk. It undertakes to match the risk profile of its interest-bearing assets with those of its interest-bearing liabilities. The remaining net interest rate exposure is managed through several types of interest rate derivatives, such as interest rate swaps and interest rate futures contracts, in order to minimise risks and financial impacts.

The vast majority of related interest rate hedges qualify for hedge accounting, and most of them are accounted for under the fair value hedge model. As a result, both the fair value changes of these derivatives and the portion of the hedged items' fair value change that is attributable to the hedged interest rate risk are recognised in Profit and Loss, where they offset to the extent the hedge is effective.

AIRBUS - FINANCIAL STATEMENTS 2021 - 20

A few interest rate swaps that have been entered into as a hedge of certain of the Company variable rate debt (see Note 37.3: "Financing Liabilities") are accounted for under the cash flow hedge model. Related fair value gains are recognised in OCI and reclassified to profit or loss when the hedged interest payments affect profit or loss. The Company has applied the relief introduced by the amendments made to IFRS 9 in September 2019 on hedge accounting, having the effect that the IBOR reform should not cause hedge accounting to terminate.

The Company invests in financial instruments such as overnight deposits, certificates of deposits, commercial papers, other money market instruments and short-term as well as medium-term bonds. For its financial instruments portfolio, the Company has an Asset Liability Management Committee in place that meets regularly and aims to limit the interest rate risk on a fair value basis through a value-at-risk approach, from which results a hedge ratio that is however not actively steered.

Commodity price risk — The Company is exposed to risk relating to fluctuations in the prices of commodities used in the supply chain. It manages these risks in the procurement process and to a certain extent uses derivative instruments in order to mitigate the risks associated with the purchase of raw materials. To the extent that the gains or losses of the derivative and those of the hedged item or transaction do not match in terms of profit or loss.

Equity price risk — The Company is to a small extent invested in equity securities mainly for operational reasons. Its exposure to equity price risk is hence limited. Furthermore, it is exposed under its LTIP to the risk of the Company share price increases. The Company limits these risks through the use of equity derivatives that qualify for hedge accounting and have been designated as hedging instruments in cash flow hedges, with a hedge ratio of 1:1.

Sensitivities of market risks — The approach used to measure and control market risk exposure within the Group's financial instrument portfolio is amongst other key indicators the value-at-risk ("VaR"). For information about VaR and the approach used by the Company to assess and monitor sensitivities of market risks please refer to Note 38.1 "Financial Risk Management" of the Consolidated Financial Statements.

The Company is part of the Group risk management process, which is more fully described in Note 37.1 "Financial Risk Management" of the Consolidated Financial Statements.

A summary of the VaR position of the Company's financial instruments portfolio at 31 December 2021 and 31 December 2020 is as follows:

<i>(In € million)</i>	Total VaR	Equity price VaR	Currency VaR	Interest rate VaR
31 December 2021				
Foreign exchange hedges	8	0	8	1
Financing liabilities, financial assets (including cash, cash equivalents, securities and related hedges)	67	58	4	51
Equity swaps	5	5	0	0
Diversification effect	(12)	(2)	(8)	(1)
All financial instruments	68	61	4	51
31 December 2020				
Foreign exchange hedges	20	0	20	0
Financing liabilities, financial assets (including cash, cash equivalents, securities and related hedges)	88	63	17	43
Equity swaps	4	4	0	0
Diversification effect	(25)	0	(35)	0
All financial instruments	87	67	2	43

The decrease in the total VaR of €19 million (2020: € 87 million) is mainly attributable to the fall of FX treasury swap at Airbus SE level. The derivative instruments entered into with external counterparties are passed on a 1:1 basis to Airbus entities. As a result, the respective market risks of the external derivative instruments are offset by corresponding opposite market risks of intragroup transactions.

Liquidity Risk

The Company's policy is to maintain sufficient cash and cash equivalents at any time to meet its present and future commitments as they fall due. It manages its liquidity by holding adequate volumes of liquid assets and maintains a committed revolving credit facility (€ 6.0 billion as of 31 December 2021), the maturity of which has been extended to 21 October 2024, in addition to the cash inflow generated by its operating business. For information on how the Group monitors and manages liquidity risk, please refer to Note 37.1 "Financial Risk Management" of the Consolidated Financial Statements.

AIRBUS - FINANCIAL STATEMENTS 2021 - 21

The contractual maturities of the Company financial liabilities, based on undiscounted cash flows and including interest payments, if applicable, are as follows:

<i>(In € million)</i>	Carrying amount	Contractual cash flows	< 1 year	1 year- 2 years	2 years- 3 years	3 years- 4 years	4 years- 5 years	More than 5 years
31 December 2021								
Non-derivative financial liabilities	(10,919)	(13,162)	(803)	(211)	(1,211)	(937)	(2,025)	(7,975)

31 December 2020								
Non-derivative financial liabilities	(12,512)	(14,656)	(1,390)	(230)	(1,045)	(1,208)	(934)	(9,847)
Derivative financial liabilities	(3,166)	(1,869)	(638)	(537)	(605)	(75)	(10)	(4)
Total	(15,678)	(16,525)	(2,028)	(767)	(1,650)	(1,283)	(944)	(9,851)

Credit Risk

The Company is exposed to credit risk to the extent of non-performance by its counterparts with regard to financial instruments or issuers of financial instruments for gross cash investments. However, it has policies in place to avoid concentrations of credit risk and to ensure that credit risk is limited.

As far as central treasury activities are concerned, credit risk resulting from financial instruments is managed by the Company. In order to ensure sufficient diversification, a credit limit system is used.

The Company monitors the performance of the individual financial instruments and the impact of market developments on their performance and takes appropriate action on foreseeable adverse development based on pre-defined procedures and escalation levels.

Sales of products and services are made to customers after having conducted appropriate internal credit risk assessment.

The booked amount of financial assets represents the maximum credit exposure. The credit quality of financial assets can be assessed by reference to external credit rating (if available) or internal assessment of customers' creditworthiness by way of internal risk pricing methods.

In 2021, the trade receivables, neither past due nor impaired amount to € 19 million (in 2020: € 492 million).

The Company measures loss allowances at an amount that represents credit losses resulting from default events that are possible within the next 12 months, unless the credit risk on a financial instrument has increased significantly since initial recognition, as described in Note 37.7 "Impairment losses" of the Consolidated Financial Statements. In 2021, an amount of € -1 million of impairment losses on financial assets is recognised in Profit and Loss (2020: € 224 million).

For further information relating to gross credit risk and impairment see "– Note 15.7: Impairment Losses".

15.2 Carrying Amounts and Fair Values of Financial Instruments

Financial instruments – The Company's financial assets mainly consist of cash, short to medium-term deposits and securities. The Company's financial liabilities include intragroup liabilities, obligations towards financial institutions and issued bonds. The Company has the same classification and accounting policies as the Group. Please refer to Note 37.1 "Financial Risk Management" of the Consolidated Financial Statements for more information.

The Company classifies its financial assets in one of the following categories: (i) at fair value through OCI, (ii) at fair value through profit and loss and (iii) at amortised cost. Classification depends on the Company's business model for managing the financial assets and the contractual terms of the cash flows.

The Company assigns its financial instruments (excluding its at-cost investments, which are outside the scope of IFRS 9 "Financial Instruments") into classes based on their category in the Statement of Financial Position.

AIRBUS - FINANCIAL STATEMENTS 2021 - 22

The following table presents the carrying amounts and fair values of financial instruments by class and by IFRS 9 measurement category as of 31 December 2021:

Fair Value Hierarchy

For further details please refer to Note 37.2 "Carrying Amounts and Fair Values of Financial Instruments" of the Consolidated Financial Statements.

The fair values disclosed for financial instruments accounted for at amortised cost reflect Level 2 input.

The following table presents the carrying amounts of the financial instruments held at fair value across the three levels of the **fair value hierarchy** as of 31 December 2021 and 2020, respectively:

(In € million)	2021			2020		
	Level 1	Level 2	Total	Level 1	Level 2	Total

AIRBUS - FINANCIAL STATEMENTS 2021 - 24

Financial Assets Designated at Fair Value through Profit or Loss

The following types of financial assets held at 31 December 2021 and 2020, respectively, are designated at fair value through profit or loss:

<i>(In € million)</i>	Nominal amount at initial recognition at	
	31 December 2021	31 December 2020
Designated at fair value through profit or loss at recognition:		
Money market funds (accumulating)	12,075	9,654
Securities	0	0
Total	12,075	9,654

The Company manages these assets and measures their performance on a fair value basis.

15.3 Potential Effect of Set-Off Rights on Recognised Financial Assets and Liabilities

The Company reports all its financial assets and financial liabilities on a gross basis. With each derivative counterparty there are master netting agreements in place providing for the immediate close-out of all outstanding derivative transactions and payment of the net termination amount in the event a party to the agreement defaults or another defined termination event occurs. The following tables set out, on a counterparty specific basis, the potential effect of master netting agreements on the Company's financial position, separately for financial assets and financial liabilities that were subject to such agreements as of 31 December 2021 and 31 December 2020, respectively:

<i>(In € million)</i>	Gross amounts recognised	Gross amounts recognised set off in the Financial Statements	Net amounts presented in the Financial Statements	Related amounts not set off in the Statement of Financial Position		Net amount
				Financial instruments	Cash collateral received	
31 December 2021						
Financial assets	1,060	0	1,060	(835)	0	225
Financial liabilities	4,230	0	4,230	(835)	0	3,395
31 December 2020						
Financial assets	3,895	0	3,895	(1,520)	(77)	(2,298)
Financial liabilities	2,305	0	2,305	(1,520)	0	785

15.4 Notional Amounts of Derivative Financial Instruments

The notional amount of **interest rate contracts** are as follows, specified by year of expected maturity:

<i>(In € million)</i>	Remaining period								Total
	1 year	2 years	3 years	4 years	5 years	6 years	7 years	> 7 years	
31 December 2021									
Interest rate contracts	0	0	1,000	750	1,850	1,324	750	4,650	10,324
Interest rate future contracts	0	0	0	0	0	0	0	0	0
31 December 2020									
Interest rate contracts	0	0	815	1,000	0	600	1,222	1,400	5,037
Interest rate future contracts	0	0	0	0	0	0	0	0	0

The notional amounts of **equity swaps** are as follows:

<i>(In € million)</i>	Remaining period					Total
	1 year	2 years	3 years	4 years	> 4 years	
31 December 2021						
	18	17	18	10	0	63
31 December 2020						
	32	23	17	8	0	80

AIRBUS - FINANCIAL STATEMENTS 2021 - 25

15.5 Derivative Financial Instruments and Hedge Accounting Disclosure

The following table presents the amounts relating to items designated as hedging instruments, no hedge ineffectiveness as of 31 December 2021 under IFRS 9:

<i>(In € million)</i>	31 December			
	2021		2020	
	Carrying values	Carrying values	Carrying values	Carrying values
	Asset	Liability	Asset	Liability
Foreign currency risk:				
Net forward sales contracts	0	0	0	0
Foreign exchange options	0	0	0	0
Interest rate risk	190	93	412	0
Commodity swap risk	0	0	0	0
Equity swap risk	0	0	0	0
Total	190	93	412	0

15.6 Net Gains or Net Losses

The Company's net gains or net losses recognised in profit or loss in 2021 and 2020, respectively are as follows:

<i>(In € million)</i>	31 December	
	2021	2020
Financial assets or financial liabilities at fair value through profit or loss:		
Held for trading	29	94
Designated on initial recognition	318	(306)
Financial assets at amortised cost ⁽¹⁾	268	(330)
Financial assets at fair value through OCI	20	75
Financial assets at fair value through profit or loss	57	(174)
Financial liabilities measured at amortised cost	(737)	423
Total	(45)	(218)

(1) Including impairment and Expected Credit Losses on Financial assets at amortised cost

15.7 Impairment Losses

Loss allowances — For its portfolio of debt instruments including bonds, term deposits and commercial papers, the Company measures loss allowances at an amount that represents credit losses resulting from default events that are possible within the next 12 months, unless the credit risk on a financial instrument has increased significantly since initial recognition. In the event of such significant increase in credit risk the Company measures loss allowances for that financial instrument at an amount equal to its life-time expected losses, *i.e.* at an amount equal to the expected credit losses that result from all possible default events over the expected life of that financial instrument.

The Company applies the low credit risk exemption allowing the Company to assume that there is no significant increase in credit risk since initial recognition of a financial instrument, if the instrument is determined to have low credit risk at the reporting date. Similarly, the Company has determined that its trade receivables and contract assets generally have low credit risk. The Company applies the simplified approach permitted by IFRS 9 of measuring expected credit losses of trade receivables and contract assets on a lifetime basis from initial recognition.

Investment grade instruments — The Company considers a significant increase in credit risk to have occurred, if there is a downgrade by four notches such that the instrument moves into a high yield bucket as a direct result of the downgrade. With respect to instruments that were high yield at initial recognition, a downgrade by four notches is considered as a significant increase in credit risk.

AIRBUS - FINANCIAL STATEMENTS 2021 - 26

<i>(In € million)</i>	Stage 1	Stage 2	Stage 3	Total
	12-month ECL	Life-time ECL	Credit impaired ECL	
At 1 January 2021	3.6	93.9	0.0	97.5

The following **impairment losses** on financial assets are recognised in profit or loss in 2021 and 2020, respectively:

<i>(In € million)</i>	2021	2020
Loans	0	(158)

Trade Receivables	0	(158)
Total		

For further information about the impairment on financial assets, please refer to Note 9 "Investments in Subsidiaries, Associates and Participations" of the Company Financial Statements.

4.6 Other Notes

16. Auditor Fees

Fees related to professional services rendered by the Company's auditor, Ernst & Young Accountants LLP, for the fiscal year 2020 were € 2,521 thousand (in 2020: € 2,198 thousand). These fees relate to audit services only.

17. Events after the Reporting Date

No events after Reporting Date.

AIRBUS - FINANCIAL STATEMENTS 2021 - 27

5

Other supplementary Information including the Independent Auditor's Report

1. Appropriation of Result

Articles 30 and 31 of the Articles of Association provide that the Board of Directors shall determine which part of the result shall be attributed to the reserves. The General Meeting of Shareholders may dispose of a reserve only upon a proposal of the Board of Directors and to the extent it is permitted by law and the Articles of Association. Dividends may only be paid after adoption of the annual accounts from which it appears that the shareholders' equity of the Company is more than the amount of the issued and paid-in part of the capital increased by the reserves that must be maintained by law.

It will be proposed at the Annual General Meeting of Shareholders that the loss for the period of € -114 million as shown in the income statements for the financial year 2021 is to be added to retained earnings. For the fiscal year 2021, the Company's Board of Directors proposes a cash distribution payment of € 1.50 per share.

Independent auditor's report

To: the shareholders and Board of Directors of Airbus SE

Report on the audit of the financial statements 2021 included in the annual report

Our opinion

We have audited the financial statements 2021 of Airbus SE (the Company) based in Amsterdam.

In our opinion the accompanying financial statements give a true and fair view of the financial position of Airbus SE as at 31 December 2021 and of its result and its cash flows for 2021 in accordance with International Financial Reporting Standards as adopted by the European Union (EU-IFRS) and with Part 9 of Book 2 of the Dutch Civil Code.

The financial statements comprise:

- The consolidated and company statement of financial position as at 31 December 2021
- The following statements for 2021: the consolidated and company income statement, the consolidated and company statements of comprehensive income, changes in equity and cash flows
- The notes comprising a summary of the significant accounting policies and other explanatory information

Basis for our opinion

We conducted our audit in accordance with Dutch law, including the Dutch Standards on Auditing. Our responsibilities under those standards are further described in the *Our responsibilities for the audit of the financial statements* section of our report.

We are independent of Airbus SE in accordance with the EU Regulation on specific requirements regarding statutory audit of public-interest entities, the "Wet toezicht accountantsorganisaties" (Wta, Audit firms supervision act), the "Verordening inzake de onafhankelijkheid van accountants bij assurance-opdrachten" (ViO, Code of Ethics for Professional Accountants, a regulation with respect to independence) and other relevant independence regulations in the Netherlands. Furthermore, we have complied with the "Verordening gedrags- en beroepsregels accountants" (VGBA, Dutch Code of Ethics).

We believe the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Information in support of our opinion

We designed our audit procedures in the context of our audit of the financial statements as a whole and in forming our opinion thereon. The following information in support of our opinion and any findings were addressed in this context, and we do not provide a separate opinion or conclusion on these matters.

Our understanding of the business

The Company is globally active in developing, producing and delivering aeronautics and aerospace products and related services. The Company is structured in segments and we tailored our group audit approach accordingly. We paid specific attention in our audit to a number of areas driven by the operations of the group and our risk assessment. We refer to the key audit matters for those areas.

We start by determining materiality and identifying and assessing the risks of material misstatement of the financial statements, whether due to fraud or error, in order to design audit procedures responsive to those risks and to obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is inherently higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

Materiality

Materiality	€261 million (2020: € 250 million)
Benchmark applied	5% of "normalized" EBIT Adjusted. (2020: 5% of "normalized" EBIT Adjusted)
Explanation	<p>We consider normalized EBIT Adjusted as the most appropriate benchmark as it best aligns with the expectations of those charged with governance at Airbus SE and in our assessment of users of the Company's financial statements.</p> <p>In determining this year's materiality, we have considered the unique combination of macro-economic factors that led to disruption in demand as a result of the COVID-19 pandemic. We believe that in order to set materiality in the current uncertain economic times, we should account for what is expected to be a relatively temporary phenomenon. Whilst we considered alternative benchmarks to normalized EBIT Adjusted including revenue and total assets, we believe that a normalized EBIT Adjusted approach to materiality remains appropriate. This addresses the analysts' consensus that the Company's industry economics including demand will return to previous levels over time. The normalized EBIT Adjusted is based on an historic ratio between EBIT Adjusted and revenue.</p>

We have also taken into account misstatements and/or possible misstatements that in our opinion are material for the users of the financial statements for qualitative reasons.

We agreed with the Audit Committee of the Board of Directors (the Audit Committee) that misstatements in excess of € 13 million, that are identified during the audit if any, would be reported to them, as well as smaller misstatements that in our view must be reported on qualitative grounds.

Scope of the group audit

Airbus SE is at the head of a group of entities. The financial information of this group is included in the consolidated financial statements.

Because we are ultimately responsible for the opinion, we are also responsible for directing, supervising and performing the group audit. In this respect we have determined the nature and extent of the audit procedures to be carried out for group entities. Decisive were the size and/or the risk profile of the group entities or operations. On this basis, we selected group entities for which an audit or review had to be carried out on the complete set of financial information or on specific items.

The entities are grouped by the Company into three business segments: Airbus, Airbus Helicopters and Airbus Defence and Space. The audit of the three segments is performed jointly by EY and KPMG.

The audits of the entities in scope are performed by either EY or KPMG network firms or by both in the countries the entities involved are located.

Because of the continuing (international) travel restrictions and social distancing due to the COVID-19 pandemic, we needed to restrict or have been unable to visit the company and component auditors to discuss, amongst others, the business activities and the identified significant risks or to review and evaluate relevant parts of the component auditor's audit documentation and to discuss significant matters arising from that evaluation on site. Furthermore, we were forced to perform our procedures to an extent remotely due to the COVID-19 measures. In order to compensate for the limitations related to the absence of physical meetings and direct observation, we used predominantly communication technology and written information exchange, attended calls and video conferences with (local) management and local auditors throughout the audit and closing meetings, and reviewed partly remotely the

component teams' working papers in order to obtain sufficient and appropriate audit evidence to provide a basis for our opinion.

In total the scope of our audit procedures covered 93% of total consolidated revenue, 92% of total consolidated assets and 86% of total consolidated EBIT and all adjustments to EBIT. The remaining 7% of revenues, 8% of total assets and 14% of total EBIT result from entities, none of which individually represents more than 1% of revenues or EBIT. For those entities, we performed, amongst others, analytical procedures to corroborate our assessment that the financial statements are free from material misstatements.

We executed an audit plan that includes participation in risk assessment and planning discussions, setting the direction of the group audit work (including instructions to the divisional and entity auditors), reviewing and discussing the planned audit approach, obtaining an understanding of the financial reporting process and performing procedures on the group consolidation, participating in the evaluation of key accounting topics, reviewing the financial statements and participating in meetings with the management of the Company and its divisions. In our audit instructions, we also included targeted audit procedures regarding the risks of material misstatement associated with the key programmes as well as targeted audit procedures regarding the risk of material misstatement due to non-compliance with laws and regulations. We assessed that the audit teams both at group and at component levels included the appropriate skills and competences which are needed for the audit of a listed client in the aerospace industry. We furthermore executed file reviews at division level.

By performing the procedures mentioned above at components of the group, together with additional procedures at group level, we have been able to obtain sufficient and appropriate audit evidence about the group's financial information to provide an opinion about the consolidated financial statements.

Teaming and use of specialists

We ensured that the audit team both at group level and at component levels included the appropriate skills and competences which are needed for the audit of a listed client in the aviation industry. We involved several EY specialists to assist the audit team, including specialists from our tax, actuarial, treasury, valuation and forensic departments.

Our focus on climate risks and the energy transition

Climate objectives will be high on the public agenda in the next decades. Issues such as CO2 reduction (potentially impact financial reporting, as these issues entail risks for the business operation, the valuation of assets ('stranded assets') and provisions or the sustainability of the business model and access to financial markets of companies with a larger CO2 footprint.

As part of our audit of the financial statements, we evaluated the extent to which climate-related risks and the possible effects of the energy transition are taken into account in estimates and significant assumptions as well as in the design of internal controls related to relevant estimates and assumptions by Airbus SE. Furthermore, we read the report of the Board of Directors and considered whether there is any material inconsistency between the non-financial information in section 4.6.4 and the financial statements.

Our audit procedures to address the assessed climate-related risks and the possible effects of the energy transition did not result in a key audit matter. However, we describe the audit procedures responsive to the assessed risk such as the valuation of long-lived assets in the description of our audit approach for the key audit matter "Recoverability of key programme assets".

Our focus on fraud and non-compliance with laws and regulations

Our responsibility

Although we are not responsible for preventing fraud or non-compliance and we cannot be expected to detect all fraud and/or non-compliance with all laws and regulations, it is our responsibility to obtain reasonable assurance that the financial statements, taken as a whole, are free from material misstatement, whether caused by fraud or error.

Our audit response related to fraud risks

We identify and assess the risks of material misstatements of the financial statements due to fraud (also referred to as 'fraud risks' or 'risks of fraud' hereafter). During our audit we obtained an understanding of the company and its environment and the components of the system of internal control, including the risk assessment process and process for responding to the risks of fraud and monitoring the system of internal control and how the Audit Committee and the Ethics, Compliance and Sustainability Committee exercise oversight, as well as the outcomes. We refer to section 4.6 of the report of the Board of Directors for the risk assessment including the risk of fraud that might result in non-compliance with anti-corruption laws and regulation.

We evaluated the design and relevant aspects of the system of internal control and in particular the fraud risk assessment, as well as the code of conduct, whistle blower procedures and incident registration. We evaluated the design and the implementation and, where considered appropriate, tested the operating effectiveness of internal controls designed to mitigate fraud risks.

As part of our process of identifying fraud risks, we evaluated fraud risk factors with respect to financial reporting fraud, misappropriation of assets and bribery and corruption in close co-operation with our forensic and legal specialists. We evaluated whether these factors indicate that a risk of material misstatement due to fraud or non-compliance with laws and regulations is present. For our audit response related to the risk of non-compliance with laws and regulations, including bribery and corruption, please refer to the next section.

We incorporated elements of unpredictability in our audit. We also considered the outcome of our other audit procedures and evaluated whether any findings were indicative of fraud or non-compliance.

As in all of our audits, we addressed the risks related to management override of controls and when identifying and assessing fraud risks we presumed that there are risks of fraud in revenue recognition. For the risk related to management override of controls we performed procedures to evaluate key accounting estimates for management override in particular relating to important judgment areas and significant accounting estimates as disclosed in Note 4 "Key Estimates and Judgements" to the financial statements. We have also used data analytics to identify and address high-risk journal entries. This risk did however not require significant auditor's attention in addition to the following fraud risks identified during our audit:

Risks related to management override in the determination of margin at completion and recoverability of key program assets	
Fraud risk	In our audit we gave significant attention to the judgments and assumptions in the determination of the provision for onerous contracts, specifically the contract margin, the impairment of assets

Risks related to management override in the determination of margin at completion and recoverability of key program assets	
	especially related to the recoverability of key program assets and the program-related provisions and depreciations and considered whether the judgments and assumptions indicated a management override that may represent a risk of material misstatement due to fraud.
Our audit approach	We describe the audit procedures responsive to the assessed risk of fraud in the description of our audit approach for the key audit matters: <ul style="list-style-type: none"> • "Estimations related to contract margin for the accounting of onerous contracts", and • "Recoverability of key programme assets - long-lived assets and inventory".

Risks of fraud in revenue recognition	
Fraud risk	When identifying and assessing fraud risks, we presume that there are risks of fraud in revenue recognition. In our audit we gave significant attention to the cut-off risk of cost incurred for performance obligation satisfied overtime and the cut-off risk on transfer of control for performance obligations satisfied at a point in time.
Our audit approach	We describe the audit procedures responsive to the risks of fraud in revenue recognition in the description of our audit approach for the key audit matter "Revenue recognition".

We considered available information and made enquiries of relevant executives, directors (including internal audit, legal, compliance, human resources and divisional directors) and the Board of Directors.

The fraud risks we identified, enquiries and other available information did not lead to specific indications for fraud or suspected fraud potentially material to the financial statements.

Our audit response related to risks of non-compliance with laws and regulations

We assessed factors related to the risks of non-compliance with laws and regulations that could reasonably be expected to have a material effect on the financial statements from our general industry experience, through discussions with the Board of Directors, reading minutes, inspection of internal audit and compliance reports, and performing substantive tests of details of classes of transactions, account balances or disclosures.

We identified the following risk of non-compliance and performed the following specific procedures:

Risk of non-compliance with anti-bribery and anti-corruption in connection with sales contracts	
Risk	A part of the Company's business is characterized by competition for contracts with customers in high-risk countries and which are often directly or indirectly associated with governments. In obtaining these contracts the Company uses commercial intermediaries in a number of territories. In identifying and assessing fraud risks, we considered the risks of non-compliance with anti-bribery and anti-corruption legislation in high-risk countries, including the use of commercial intermediaries. We refer to the discussion of legal risks in section 4.6.3 'Anti-Corruption Laws and Regulations' of the report of the Board of Directors.
Our audit approach	We performed amongst others the following audit procedures, directed specifically this fraud risk and designed and performed in conjunction with our in-house forensic specialists: <ul style="list-style-type: none"> • We evaluated the tone set by management and the Board of Directors as well as the Company's

- We evaluated the risk environment and evaluated and tested the Company's policies and anti-bribery and anti-corruption procedures.

Risk of non-compliance with anti-bribery and anti-corruption in connection with sales contracts	
	<ul style="list-style-type: none"> • We tested the selection process of commercial intermediaries, related contractual arrangements and payments to intermediaries. • We maintained a high level of vigilance to possible indications of bribery and corruption whilst carrying out our other audit procedures. • We tested journal entries and other transactions with unusual characteristics using amongst other data-analytics tools. • We evaluated the activities and reporting of the monitor and assessed the incident reporting system of Airbus and follow up of material incidents.

We also read and evaluated lawyers' letters and correspondence with regulatory authorities and remained alert to any indication of (suspected) non-compliance throughout the audit. Finally we obtained written representations that all known instances of non-compliance with laws and regulations have been disclosed to us.

We assessed that the disclosures in note 38 of the financial statements reflect the current status of the most significant investigations regarding suspected breaches of law and regulations in accordance with accounting standards. We also evaluated the appropriateness of the contingent liability disclosure (note 24) in the financial statements.

Our audit response related to going concern

As disclosed in section in Note 2 "Impact of the COVID-19 pandemic" to the financial statement, the Board of Directors made a specific assessment of the company's ability to continue as a going concern and to continue its operations for at least the next 12 months. We discussed and evaluated the specific assessment with management exercising professional judgment and maintaining professional scepticism. We considered whether the Board's going concern assessment, based on our knowledge and understanding obtained through our audit of the financial statements or otherwise, contains all events or conditions that may cast significant doubt on the company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Based on our procedures performed, we did not identify significant doubts on the company's ability to continue as a going concern for the next 12 months. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause a company to cease to continue as a going concern.

Our key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements. We have communicated the key audit matters to the Board of Directors. The key audit matters are not a comprehensive reflection of all matters discussed.

The key audit matter "Litigation and claims and risk of non-compliance with laws and regulations" which was included in our last year's auditor's report, is not considered a key audit matter for 2021 as the deferred prosecution agreement was signed in 2020.

Revenue recognition (Reference is made to the disclosures on Note 3 "Significant Accounting Policies", Note 4 "Key estimates and judgements", Note 11 "Segment Information" and Note 12 "Revenues and gross margin" of the financial statements)	
Risk	The Group revenue recognition is complex due to its wide range of activities (including the sale of commercial aircraft and helicopters, sale of military aircraft and helicopters, sale of space systems and services), its various types of contracts including non-standard clauses and the duration of some contracts including long-term development activities.

Revenue recognition (Reference is made to the disclosures on Note 3 "Significant Accounting Policies", Note 4 "Key estimates and judgements", Note 11 "Segment Information" and Note 12 "Revenues and gross margin" of the financial statements)	

	<p>When identifying and assessing fraud risks, we presume that there are risks of fraud in revenue recognition relating to the estimates of margin at completion and cut-off of costs incurred related to over time contracts as well as the cut-off risk on deliveries related to point in time contracts.</p> <p>Furthermore, recognition of revenue includes significant judgements and estimates including whether or not the contracts contain multiple performance obligations which should be accounted for separately and including the determination of the most appropriate method for revenue recognition of these performance obligations. This comprises the identification of potential variable considerations reducing the consideration received, allocation of this consideration to the different performance obligations and assessing if the performance obligations are satisfied over time or at a point in time.</p> <p>In particular the amount of revenue and profit recognized in a year for performance obligations satisfied at a point in time is dependent on the transfer of control. For performance obligations satisfied over time this is dependent on the assessment of the stage of completion of performance obligations as well as estimated total revenues and estimated total costs. The Company uses costs incurred as the method for determining stage of completion.</p>
Our audit approach	<p>Our audit procedures included, amongst others, assessing the appropriateness of the Company's accounting policies related to revenue recognition according to IFRS15 "Revenue from contracts with customers" and whether the accounting policies have been applied consistently or whether changes, if any, are appropriate in the circumstances. In addition, we evaluated the design and implementation and, where considered appropriate, tested the operating effectiveness of internal controls related to the completeness, accuracy and timing of the revenue recognized. We selected individual revenue transactions to assess proper identification of the performance obligations in the contracts and allocation of the consideration amongst the performance obligation (such as the A400M contract and space contracts), the completeness and valuation of the variable considerations included in the transaction price (notably for A400M contract) and the timing of transfer of control.</p> <p>In order to evaluate the significant judgements and estimates made by management, we read supporting contractual agreements, met with sales representatives and programme teams to understand the nature of the various obligations to be rendered under the contract and discuss specific clauses that could prevent transfer of control (mostly for the sales of commercial aircrafts), obtained evidence of transfer of control such as proof of delivery, tested the costs incurred, examined computation of costs progression and assessed the reasonableness of the estimated cost to complete included in the cost-to-cost method for performance obligation recognized over time (notably for A400M development).</p> <p>Finally, we determined that appropriate disclosures were made in the financial statements.</p>

<p>Estimations related to contract margin for the accounting of onerous contracts (Reference is made to the disclosure on Note 3 "Significant Accounting Policies", Note 4 "Key estimates and judgements", Note 12 "Revenues and gross margin" and Note 25 "Provisions, contingent assets and contingent liabilities" of the financial statements)</p>	
Risk	<p>The Group owns a large portfolio of long-term contracts for which it needs to assess the contract margin in order to recognise a provision for onerous contract.</p> <p>Provisions for onerous contracts such as for the A400M contract are recognized when it becomes probable that the present value of unavoidable costs of fulfilling the obligations under the contract exceeds the present value of economic benefits expected to be received under the contract.</p> <p>The identification and determination of these contract margins and provisions for onerous contracts requires management's significant judgement and assumptions associated with estimated revenue and costs at completion of the programme, the achievement of technical milestones, production plan, performance guarantees as well as key risks such as expected outcome from ongoing negotiations with customers, penalties for delay or technical non-compliance. We considered whether the judgments and assumptions indicated a management override that may represent a risk of material misstatement due to fraud.</p>
Our audit approach	<p>Our audit procedures included, amongst others, assessing the appropriateness of the Company's accounting policies related to estimations for onerous contracts according to IAS 37 "Provisions, contingent liabilities and contingent assets" and whether the accounting policies</p>

have been applied consistently or whether changes, if any, are appropriate in the

We evaluated the design and implementation and where considered appropriate tested the operating effectiveness of internal controls for accounting for onerous contracts and for the assessment of the contract margin.

We also performed substantive procedures on individually significant programmes. We evaluated management’s assumptions in the identification and determination of amongst others the stage of completion of a project and estimates to complete for both revenue and costs. We tested the costs incurred to date and the accuracy and completeness of the data used in developing these key estimates.

We also evaluated management’s assessment of key contract risks and opportunities to determine whether or not these are appropriately reflected in the cost to complete forecasts, paid specific attention to technical and market developments and ongoing negotiations with customers. We performed inquiries with the programme team and the Head of Programme in order to confirm our understanding on the programme status and associated risks which may affect total estimated costs to complete.

We challenged management’s assumptions by discussing and reviewing correspondence with customers, considered the accuracy and consistency of similar estimates made in previous years and corroborated the assumptions with the latest contractual information.

Finally, we determined that appropriate disclosures were made in the financial statements.

Recoverability of key programme assets - long-lived assets and inventory (Reference is made to the disclosures on Note 3 "Significant Accounting Policies", Note 19 "Intangible Assets" and Note 21 "Property, Plant and Equipment" of the financial statements)	
Risk	<p>Recoverability of finished aircraft and work in progress inventory, capitalized program development costs, other intangible assets and jigs and tools, needs to be tested if there is an indicator of impairment or the reversal thereof.</p> <p>The main estimates to determine if an impairment of long-lived assets such as capitalized development costs, other intangible assets and jigs and tools has to be recognized are the future cash flows and the appropriate discount rates.</p> <p>In case of order cancellation, some work in progress and finished aircraft may no longer be fully recoverable. Associated depreciations depend on the estimate of the selling price, remarketing costs and other costs.</p> <p>Owing to the inherent uncertainty involved in forecasting future revenues and costs and interpreting contractual and commercial positions in determining impairments, especially in the COVID-19 context, this is a key audit area. We considered whether the judgments and assumptions indicated a management override that may represent a risk of material misstatement due to fraud.</p> <p>Inherent uncertainties also include that new or amended climate change related laws and regulations, political decisions and/or social context may result in the need to revise existing estimates. Climate change related estimation processes, measurement systems and reporting standards are expected to further develop and improve over time, which might result in changes of estimates.</p>
Our audit approach	<p>Our audit procedures included, amongst others, assessing the appropriateness of the Company’s accounting policies related to estimations for recoverability of assets according to IAS 36 "Impairment of assets" and IAS 2 "Inventories" and whether the accounting policies have been applied consistently or whether changes, if any, are appropriate in the circumstances.</p> <p>We evaluated the design and implementation and where considered appropriate tested the operating effectiveness of internal controls for identifying and recording impairments of long-lived assets and depreciations of work-in-progress and finished aircrafts.</p> <p>We evaluated the analysis performed by management regarding the indicators of impairment, considering future expected orders and deliveries. If indicators of impairment were identified, we tested the impairment tests performed by management by reviewing the integrity of the management’s impairment model. We assessed management’s assumptions for the discount rate, the determination of the forecasted revenue to be realized (including the timing of expected deliveries or services and estimated selling price), cost to be incurred (including any contractual penalties), the expected gross margin, including performing sensitivity analysis to evaluate the impact of changing some assumptions such as the discount rate or key business</p>

parameters (price, growth rate for instance), and for the assumptions related to useful life of the program in the context of climate change. We also performed inquiry of the Programme Controller and Head of Programmes to confirm our understanding of the status of the programme.

We tested the valuation of work-in-progress and finished goods by evaluating management's assumptions in the determination of likelihood of cancellation, future selling price, remarketing and other costs. We challenged management's assumptions by discussing and reviewing correspondence with customers and comparing them with historical data, appraisers' market value and agreements with customers.

Recoverability of key programme assets - long-lived assets and inventory (Reference is made to the disclosures on Note 3 "Significant Accounting Policies", Note 19 "Intangible Assets" and Note 21 "Property, Plant and Equipment" of the financial statements)

Finally, we determined that appropriate disclosures were made in the financial statements.

Accounting for derivative financial instruments and hedge ineffectiveness
(Reference is made to Note 38 "Financial Instruments" of the financial statements)

Risk	<p>The Company operates in a business environment that is exposed to currency volatility. A significant portion of the Company's revenue is denominated in US dollars, while a major part of its costs is incurred in Euro and, to a lesser extent, in Pound Sterling. In response to these risks the Company uses financial instruments (mainly currency forwards) to mitigate the exposure to changes in market rates.</p> <p>The Company applies cash flow hedge accounting. The accounting policy allows the Company to re-position the foreign currency hedges and avoid hedge disqualification when a hedged aircraft is postponed. This is conditioned by the Company's ability to demonstrate the absence of a reduction in the number of hedged aircrafts over the Foreign Exchange management hedging horizon.</p> <p>The magnitude of the Company's hedge portfolio entails a significant "mark to market" valuation risk. Furthermore, in the COVID-19 context, potential changes in the delivery assumptions related to aircraft cancellations, customer defaults and aircraft postponement beyond the Foreign exchange management hedging horizon could lead to disqualification of the associated cash-flow hedges and incorrect accounting.</p>
Our audit approach	<p>Our audit procedures included, amongst others, assessing the appropriateness of the Company's accounting policies related to valuation of financial instruments and hedge accounting according to IFRS 9 "Financial Instruments" and IFRS 13 "Fair Value Measurement" and whether the accounting policies have been applied consistently or whether changes, if any, are appropriate in the circumstances.</p> <p>For the audit of the foreign currency hedge portfolio, we used specialists who evaluated the design and implementation and where considered appropriate tested the operating effectiveness of controls around the Company's central treasury system, independently calculated the valuation of the treasury portfolio by sample and evaluated the application of the cash flow hedge accounting rules.</p> <p>We obtained counterparty confirmation of the outstanding financial instruments to verify the existence and ownership of the hedge portfolio. Based on a sample of financial derivative instruments we assessed that the fair value of the financial instruments was correctly determined and no material exceptions were noted.</p> <p>We verified the documentation of the hedged items supported by both the recoverable backlog and production rate over the Foreign Exchange management hedging horizon. We tested the highly probable assessment of future aircraft delivery performed by the Company and challenged key management assumptions pertaining to order cancellation, airline default and aircraft rescheduling risks.</p> <p>Finally, we determined that appropriate disclosures were made in the financial statements.</p>

Report on other information included in the annual report

The annual report contains other information in addition to the financial statements and our auditor's report thereon.

Based on the following procedures performed, we conclude that the other information:

- Is consistent with the financial statements and does not contain material misstatements
- Contains the information as required by Part 9 of Book 2 for the management report and the other information as required by Part 9 of Book 2 of the Dutch Civil Code and as required by Sections 2:135b and 2:145 sub-section 2 of the Dutch Civil Code for the remuneration report

We have read the other information. Based on our knowledge and understanding obtained through our audit of the financial statements or otherwise, we have considered whether the other information contains material misstatements. By performing these procedures, we comply with the requirements of Part 9 of Book 2 and Section 2:135b sub-Section 7 of the Dutch Civil Code and the Dutch Standard 720. The scope of the procedures performed is substantially less than the scope of those performed in our audit of the financial statements.

The Board of Directors is responsible for the preparation of the other information, including the management report in accordance with Part 9 of Book 2 of the Dutch Civil Code, other information as required by Part 9 of Book 2 of the Dutch Civil Code and for ensuring that the remuneration report is drawn up and published in accordance with Sections 2:135b and 2:145 sub-section 2 of the Dutch Civil Code.

Report on other legal and regulatory requirements and ESEF

Engagement

We were engaged by the general meeting as auditor of Airbus SE on 28 April 2016, as of the audit for the year 2016 and have operated as statutory auditor ever since that date.

No prohibited non-audit services

We have not provided prohibited non-audit services as referred to in Article 5(1) of the EU Regulation on specific requirements regarding statutory audit of public-interest entities.

European Single Electronic Reporting Format (ESEF)

Airbus SE has prepared the annual report in ESEF. The requirements for this are set out in the Delegated Regulation (EU) 2019/815 with regard to regulatory technical standards on the specification of a single electronic reporting format (hereinafter: the RTS on ESEF).

In our opinion, the annual report, prepared in the XHTML format, including the partially marked -up consolidated financial statements, as included in the reporting package by Airbus SE, complies in all material respects with the RTS on ESEF.

The Board of Directors is responsible for preparing the annual report, including the financial statements, in accordance with the RTS on ESEF, whereby the Board of Directors combines the various components into a single reporting package.

Our responsibility is to obtain reasonable assurance for our opinion whether the annual report in this reporting package complies with the RTS on ESEF.

Our procedures, taking into account Alert 43 of the NBA (the Netherlands Institute of Chartered Accountants),

included amongst others:

- Obtaining an understanding of the Company's financial reporting process, including the preparation of the reporting package
- Obtaining the reporting package and performing validations to determine whether the reporting package containing the Inline XBRL instance document and the XBRL extension taxonomy files has been prepared in accordance with the technical specifications as included in the RTS on ESEF
- Examining the information related to the consolidated financial statements in the reporting package to determine whether all required mark-ups have been applied and whether these are in accordance with the RTS on ESEF

Description of responsibilities regarding the financial statements

Responsibilities of the Board of Directors and the Audit Committee for the financial statements

The Board of Directors is responsible for the preparation and fair presentation of the financial statements in accordance with EU-IFRS and Part 9 of Book 2 of the Dutch Civil Code. Furthermore, the Board of Directors is responsible for such internal control as it determines is necessary to enable the preparation of the financial statements that are free from material misstatement, whether due to fraud or error.

As part of the preparation of the financial statements, the Board of Directors is responsible for assessing the Company's ability to continue as a going concern. Based on the financial reporting frameworks mentioned, the Board of Directors should prepare the financial statements using the going concern basis of accounting unless the Board of Directors either intends to liquidate the Company or to cease operations or has no realistic alternative but to do so. The Board of Directors should disclose events and circumstances that may cast significant doubt on the Company's ability to continue as a going concern in the financial statements.

The Audit Committee is responsible for overseeing the Company's financial reporting process.

Our responsibilities for the audit of the financial statements

Our objective is to plan and perform the audit engagement in a manner that allows us to obtain sufficient and appropriate audit evidence for our opinion.

Our audit has been performed with a high, but not absolute, level of assurance, which means we may not detect all material errors and fraud during our audit.

Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements. The materiality affects the nature, timing and extent of our audit procedures and the evaluation of the effect of identified misstatements on our opinion.

We have exercised professional judgment and have maintained professional scepticism throughout the audit, in accordance with Dutch Standards on Auditing, ethical requirements and independence requirements. The 'Information in support of our opinion' section above includes an informative summary of our responsibilities and the work performed as the basis for our opinion.

Our audit further included amongst others:

- Performing audit procedures responsive to the risks identified, and obtaining audit evidence that is sufficient and appropriate to provide a basis for our opinion
- Obtaining an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control
- Evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors
- Evaluating the overall presentation, structure and content of the financial statements, including the disclosures
- Evaluating whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation

Communication

We communicate with the Audit Committee regarding, amongst other matters, the planned scope and timing of the audit and significant audit findings, including any significant findings in internal control that we identify during our audit.

In this respect we also submit an additional report to the Audit Committee in accordance with Article 11 of the EU Regulation on specific requirements regarding statutory audit of public-interest entities. The information included in this additional report is consistent with our audit opinion in this auditor's report.

We provide the Audit Committee with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with the Audit Committee, we determine the key audit matters: those matters that were of most significance in the audit of the financial statements. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, not communicating the matter is in the public interest.

Amsterdam, 16 February 2022

Dear Shareholders,

This is the Report of the Board of Directors (the "**Board Report**") on the activities of Airbus SE (together with its subsidiaries referred to as the "**Company**") during the 2021 financial year, prepared in accordance with Dutch law. For further information regarding the Company's business, finances, risk factors and corporate governance, please refer to the Company's website: www.airbus.com.

1. General Overview

Airbus pioneers sustainable aerospace for a safe and united world. The Company constantly innovates to provide efficient and technologically-advanced solutions in aerospace, defence, and connected services. In commercial aircraft, Airbus offers modern and fuel-efficient airliners and associated services. Airbus is also a European leader in defence and security and one of the world's leading space businesses. In helicopters, Airbus provides the most efficient civil and military rotorcraft solutions and services worldwide.

2. Summary 2021

2021 was a year of transition, with the focus shifting from navigating the pandemic towards recovery and growth. The Company achieved a great deal despite all the complexities it faced. Its accomplishments ranged from major new orders and the resumption of the single-aisle commercial aircraft ramp-up, to launching the A350 freighter, preparing the defence programmes of tomorrow and pioneering sustainable aerospace.

A selection of key announcements follows (the full list of announcements is available at: <https://www.airbus.com/en/newsroom>):

Airbus

- Airbus delivered 611 commercial aircraft to 88 customers in 2021. It recorded a total of 771 new orders (507 net orders) from 27 customers in all market segments. The A220 won 38 new orders, confirming it as the leading aircraft in its category. The A320 Family won 437 new orders including 37 A321XLR. In the widebody segment, Airbus won 46 new net orders including 30 A330s and 16 A350s.
- After receiving Board of Directors approval during the year, orders and commitments for the A350 Freighter were received from customers CMA CGM, Air Lease Corporation, Air France and Singapore Airlines.
- Airbus delivered the first A350 from its widebody completion & delivery centre in Tianjin (C&DC), China, taking additional steps in the expansion of its global footprint and long-term strategic partnership with China.
- Airbus resumed work on the modernisation of its A320 Family industrial capabilities in Toulouse. They will provide Airbus with increased flexibility throughout its global industrial production system to respond to market recovery and future demand.
- The ACJ TwoTwenty, launched in 2020, successfully completed its first flight from Canada's Mirabel airport in December 2021. The aircraft is a new value proposition to business aviation buyers.
- Airbus, Dassault Aviation, ONERA, the French Ministry of Transports and Safran launched the first in-flight study of a single-aisle aircraft running on unblended sustainable aviation fuel (SAF). During the flight test over the Toulouse region, one CFM LEAP-1A engine of an Airbus A319neo test aircraft operated on 100% SAF. Initial results from the ground and flight tests are expected in 2022.
- Airbus performed the first long-haul demonstration of formation flight in general air traffic (GAT) regulated transatlantic airspace with two A350 aircraft flying at three kilometres apart from Toulouse, France to Montreal, Canada. Over 6 tons of CO2 emissions were saved on the trip, confirming the potential for more than a 5% fuel saving on long-haul flights.

Airbus Helicopters

- Airbus Helicopters logged 419 gross orders (414 net orders), showing solid signs of recovery from the 2020 market situation which was heavily impacted by the economic consequences of the COVID-19 pandemic. It saw strong momentum from its home countries, with France ordering 40 H160s (civil and military versions), eight H225Ms, and two H145s, Spain ordering 36 H135s, and Germany procuring eight H145s for the Bavarian police force. Deliveries increased from 300 in 2020 to 338 in 2021.
- Airbus Helicopters delivered the first ever H160 to Japanese operator All Nippon Helicopter (ANH), heralding a new chapter for this next generation twin-engine helicopter. The multi-role H160 was delivered from Airbus' helicopter facility in Kobe, Japan, where flight training and specialised equipment installation for electronic news gathering will be performed before the helicopter's entry into service.
- The French Armament General Directorate (DGA) signed a contract with Airbus Helicopters for the development and procurement of the H160M in the frame of the Light Joint Helicopter programme (HIL). The contract includes the development of several prototypes and the delivery of a first batch of 30 aircraft (21 for the army, eight for the navy and one for the air force). The French Ministry for the Armed Forces plans to order a total of 169 H160M helicopters, or Guépard as it will be known in the French armed forces.
- Airbus Helicopters received EASA and FAA certification for the power upgrade of its single-engine H125 helicopter.

use of the available power of the existing engines to increase the Airbus A320 power by up to 10% by making full

- An H225 performed the first ever helicopter flight with 100% sustainable aviation fuel (SAF) powering one of the Safran Makila 2 engines. The flight, which took place in Marignane, marks the start of a flight campaign aiming to assess the impact of unblended SAF on helicopter systems, with a view to certifying the use of SAF blends that exceed today's 50% limit.
- Airbus announced plans for a new CityAirbus at the Company's first AirbusSummit on "Pioneering Sustainable Aerospace" as the emerging Urban Air Mobility market begins to firm up. Ushering in the next generation of CityAirbus, the fully electric vehicle is equipped with fixed wings, a V-shaped tail, and eight electrically powered propellers as part of its uniquely designed distributed propulsion system. It is designed to carry up to four passengers in a zero emissions flight in multiple applications.

Airbus Defence and Space

- India formalised the acquisition of 56 Airbus C295 aircraft to replace the Indian Air Force (IAF) legacy AVRO fleet. It is the first 'Make in India' aerospace programme in the private sector, involving the full development of a complete industrial ecosystem: from the manufacture to assembly, test and qualification, to delivery and maintenance of the complete lifecycle of the aircraft.
- The Republic of Kazakhstan placed an order for two Airbus A400M aircraft, becoming the ninth operator together with Germany, France, United Kingdom, Spain, Turkey, Belgium, Malaysia and Luxembourg. Separately, the Indonesia Ministry of Defence placed an order for two Airbus A400M aircraft in multirole tanker and transport configuration, with the contract due to become effective in 2022.
- A330 Multi Role Tanker Transport (MRTT) aircraft orders: the United Arab Emirates Air Force & Air Defence formally ordered two additional A330 MRTT aircraft, increasing the country's MRTT fleet to five aircraft. Separately, the Spanish Ministry of Defence signed a formal order for the acquisition of three A330 MRTTs.
- Two satellites of the Pléiades Neo Earth observation constellation were successfully launched by Arianespace's European launcher Vega from French Guiana. Entirely funded, designed, manufactured, owned and operated by Airbus, Pléiades Neo will provide commercial and institutional customers with high-level insights for the next decade.

3. Share Capital and Stock Price Evolution

3.1 Shareholding and voting rights

Issued share capital

As of 31 December 2021, Airbus SE's issued share capital amounted to €786,083,690, divided into €786,083,690 shares of a nominal value of € 1 each. The issued share capital of Airbus SE as of such date represents 26.20% of the authorised share capital of € 3 billion, comprising three billion shares. The holder of one issued share has one vote and is entitled to profit in proportion to his/her participation in the issued share capital¹.

Modification of share capital or rights attached to shares

The shareholders' meeting has the power to authorise the issuance of shares. The shareholders' meeting may also authorise the Board of Directors, for a period of no more than five years, to issue shares and to determine the terms and conditions of share issuances.

Holders of shares have a pre-emptive right to subscribe for any newly issued shares in proportion to the aggregate nominal value of shares held by them, except for: (i) shares issued for consideration other than cash, (ii) shares issued to employees of the Company and (iii) shares issued pursuant to a previously granted right to subscribe for those shares. For the contractual position as to pre-emption rights, see "3.2: Relationship with Principal Shareholders".

The shareholders' meeting also has the power to limit or to exclude pre-emption rights in connection with new issuances of shares, and may authorise the Board of Directors, for a period of no more than five years, to limit or to exclude pre-emption rights. All resolutions in this context must be approved by a two-thirds majority of the votes cast during the shareholders' meeting, in the case where less than half of the capital issued is present or represented at said meeting.

However, the articles of association of Airbus SE ("**Articles of Association**") provide that the shareholders' meeting is not authorised to pass any shareholders' resolution to issue shares, or to grant rights to subscribe for shares, if the aggregate issue price is in excess of € 500 million, per share issuance, and no preferential subscription rights exist in respect thereof (by virtue of Dutch law, or because they have been excluded by the competent corporate body). The same limitation applies if the shareholders' meeting wishes to designate the Board of Directors to have the authority to resolve on such share issuance or granting of rights. These limitations in the Articles of Association can only be changed by the shareholders' meeting with a 75% voting majority.

Pursuant to the shareholders' resolutions adopted at the Annual General Meeting ("**AGM**") held on 14 April 2021, the powers to issue shares and to grant rights to subscribe for shares and to limit or exclude preferential subscription rights for existing shareholders, have been delegated to the Board of Directors for the purpose of:

1. employee share ownership plans and share-related long-term incentive plans, provided that such powers shall be limited to 0.14% of Airbus SE's authorised share capital; and
2. funding Airbus SE and any of its subsidiaries, provided that such powers shall be limited to 0.3% of Airbus SE's authorised share capital.

Such powers have been granted for a period expiring at the AGM to be held in 2022, and shall not extend to issuing shares or granting rights to subscribe for shares if: (i) there is no preferential subscription right (by virtue of Dutch law, or because it has been excluded by means of a resolution of the competent corporate body) and (ii) it concerns an aggregate issue price in excess of € 500 million per share issuance.

At the AGM held on 14 April 2021, the Board of Directors was authorised for a period of 18 months from the date of such AGM to repurchase shares of Airbus SE, by any means, including derivative products, on any stock exchange or otherwise, as long as, upon such repurchase, Airbus SE would not hold more than 10% of Airbus SE's issued share capital, and at a price per share not less than the nominal value, and not more than the higher of the price of the independent trade and the highest current independent bid on the trading venues of the regulated market of the country in which the purchase is carried out.

¹ Except for the shares held by Airbus SE itself and subject to certain other exceptions under Dutch law.

The shareholders' meeting may reduce the issued share capital by cancellation of shares or by reducing the nominal value of the shares by means of an amendment to the Articles of Association. The cancellation of shares requires the approval of a two-thirds majority of the votes cast during the shareholders' meeting in the case where less than half of the capital issued is present or represented at the meeting; the reduction of nominal value by means of an amendment to the Articles of Association requires the approval of a two-thirds majority of the votes cast during the shareholders' meeting (unless the amendment to the Articles of Association also concerns an amendment which under the Articles of Association requires a 75% voting majority).

At the AGM held on 14 April 2021, the Board of Directors and the Chief Executive Officer ("**CEO**") were authorised, with powers of substitution, to implement a cancellation of shares held or repurchased by Airbus SE, including the authorisation to establish the exact number of the relevant shares thus repurchased to be cancelled.

Securities granting access to Airbus SE's capital

There are no securities that give access, immediately or over time, to the share capital of Airbus SE (see "Notes to the IFRS Consolidated Financial Statements — Note 36.3: Financing Liabilities").

Changes in the issued share capital in 2021

In the course of 2021, a total number of 1,934,420 new shares were issued, all of which were issued in the framework of the 2021 Employee Share Ownership Plan ("**ESOP**").

Repurchases and cancellations of shares in 2021

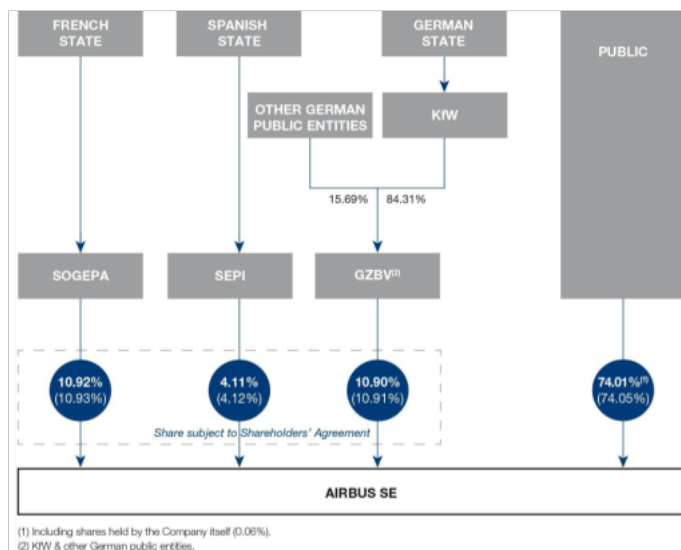

During 2021 (i) Airbus SE repurchased 220,000 shares and (ii) none of the treasury shares were cancelled. As of 31 December 2021, Airbus SE held 454,735 treasury shares.

Shareholding structure at the end of 2021

As of 31 December 2021, the French State held 10.92% of the outstanding Airbus SE shares through Société de Gestion de Participations Aéronautiques ("Sogepa"), the German State held 10.90% through Gesellschaft zur Beteiligungsverwaltung GZBV mbH & Co. KG ("GZBV"), and the Spanish State held 4.11% through Sociedad Estatal de Participaciones Industriales ("SEPI"). The public (including the Company's employees) and Airbus SE held, respectively, 74.01% and 0.06% of Airbus SE's share capital.

Airbus SE / 2021 Board Report 8

The diagram below shows the ownership structure of Airbus SE as of 31 December 2021 (% of capital and of voting rights (in parentheses) before exercise of the convertible bonds).

Shareholders may have disclosure obligations under Dutch law. These apply to any person or entity that acquires, holds or disposes of an interest in the Airbus SE's voting rights and/or capital. Disclosure is required when the percentage of (actual or deemed) voting rights, capital interest or gross short position reaches, exceeds or falls below 3%, 5%, 10%, 15%, 20%, 25%, 30%, 40%, 50%, 60%, 75% or 95% (whether because of an acquisition or disposal of shares or other instruments, or because of a change in the total voting rights or capital issued). Disclosures must be made to the Netherlands Authority for the Financial Markets ("AFM") immediately. Additional disclosure and/or publication obligations apply under European regulations for net short positions in respect of Airbus SE.

In 2021, the below listed entity notified the AFM of its substantial interest in Airbus SE. For further details, please refer to the website of the AFM at: www.afm.nl.

- a) Notification made to the AFM because the capital interest exceeded the above mentioned thresholds:
 - Blackrock, Inc. owns 3,85% of the voting rights in Airbus SE (3.76% directly and 0.09% indirectly owned by Blackrock, Inc.).
- b) Notification made to the AFM because the capital interest fell below the above mentioned thresholds:
 - Goldman Sachs (owns 2.92% and 2.92% voting rights), EuroPacific Growth Fund (owns 2.91% and 0% voting rights)

Right to attend shareholders' meetings

Each holder of one or more shares may attend shareholders' meetings, either in person or by written proxy, speak and vote according to the Articles of Association. However, under and subject to the terms of the Articles of Association, these rights may be suspended under certain circumstances. A shareholder, or another person who has the right to attend a shareholders' meeting, can be represented by more than one proxy holder, provided that only one proxy holder can exercise the rights attached to each share.

The persons who have the right to attend and vote at shareholders' meetings are those who are on record in a register designated for that purpose by the Board of Directors on the 28th day prior to the day of the shareholders' meeting (the "Registration Date"), irrespective of who may be entitled to the shares at the time of that meeting.

Airbus SE / 2021 Board Report 9

As a prerequisite to attending the shareholders' meeting and to casting votes, Airbus SE, or alternatively an entity or person so designated by Airbus SE, should be notified in writing by each holder of one or more shares and those who derive the aforementioned rights from these shares, not earlier than the Registration Date, of the intention to attend the meeting in accordance with the relevant convening notice.

Shareholders holding their Airbus SE shares through Euroclear France S.A. who wish to attend general meetings will have to request from their financial intermediary or acountholder an admission card and be given a proxy to this effect from Euroclear France S.A. in accordance with the relevant convening notice. For this purpose, a shareholder will also be able to request that its shares be registered directly (and not through Euroclear France S.A.) in the register of Airbus SE. However, only shares registered in the name of Euroclear France S.A. may be traded on stock exchanges.

In order to exercise their voting rights, the shareholders will also be able, by contacting their financial intermediary or acountholder, to give their voting instructions to Euroclear France or to any other person designated for this purpose, as specified in the relevant convening notice.

Pursuant to its Articles of Association, Airbus SE may provide for electronic means of attendance, speaking and voting at the shareholders' meetings in such circumstances, and subject to such conditions as determined by the Board of Directors.

Notification Requirements and Mandatory Disposal Threshold Restricting Ownership to 15%

Under the Articles of Association, each shareholder must notify Airbus SE when it (or another party in respect of its interest in Airbus SE) must make a notification to the AFM of a substantial interest or short position with respect to Airbus SE, when its interest (alone or with concert parties) reaches or crosses the Mandatory Disposal Threshold (as defined below) or, subject to certain conditions and exemptions, when changes occur in the composition, nature and/or size of any interest held by it or by its concert parties in excess of the Mandatory Disposal Threshold (as defined below). Failure to comply with these obligations may, subject to a prior notification by Airbus SE, result in the suspension of voting and attendance rights until the shareholder has complied with its obligations.

The Articles of Association prohibit any shareholder from holding an interest of more than 15% of the share capital or voting rights of Airbus SE, acting alone or in concert with others (the "Mandatory Disposal Threshold"). An interest ("Interest") includes not only shares and voting rights, but also other instruments that cause shares or voting rights to be deemed to be at someone's disposal pursuant to the Dutch Financial Supervision Act, and must be notified to the Dutch regulator, the AFM, if certain thresholds are reached or crossed. Any shareholder having an interest of more than the Mandatory Disposal Threshold must reduce its interest below the Mandatory Disposal Threshold, for instance by disposing of its Excess Shares, within two weeks after such notification by Airbus SE. Upon receipt of such notification, the voting, attendance and dividend rights attached to the Excess Shares shall be suspended. The same applies to concerts of shareholders and other persons who together hold an interest exceeding the Mandatory Disposal Threshold. Should such shareholder or concert not comply with not exceeding the 15% Mandatory Disposal Threshold by the end of such two-week period, the voting, attendance and dividend rights attached to all shares held by such shareholder or concert shall be suspended, and their Excess Shares would be transferred to a Dutch law foundation ("Stichting"), which can, and eventually must, dispose of them. The suspension of shareholder rights described above shall be lifted once a shareholder or concert complies with its obligations under the Articles of Association.

The Dutch law foundation would issue depositary receipts to the relevant shareholder in return for the Excess Shares transferred to the foundation, which would entitle the relevant shareholder to the economic rights, but not the voting rights, attached to such Airbus SE shares. The foundation's Articles of Association and the terms of administration governing the relationship between the foundation and the depositary receipt holders provide, *inter alia*, that:

- ▶ the Board members of the foundation must be independent from Airbus SE, any grandfathered persons and their affiliates (see "3.1: Exemptions from Mandatory Disposal Threshold") and any holder of depositary receipts and their affiliates (there is an agreement under which Airbus SE will, *inter alia*, cover the foundation's expenses and indemnify the Board members against liability);
- ▶ the Board members are appointed (except for the initial Board Members who were appointed at incorporation) and dismissed by the Management Board of the foundation (Airbus SE may however appoint one Board member in a situation where there are no foundation Board members);
- ▶ the foundation has no discretion as to the exercise of voting rights attached to any of the Airbus SE shares held by it and will in a mechanical manner vote to reflect the outcome of the votes cast (or not cast) by the other shareholders, and the foundation will distribute any dividends or other distributions it receives from Airbus SE to the holders of depositary receipts; and
- ▶ no transfer of a depositary receipt can be made without the prior written approval of the foundation's Board.

Airbus SE / 2021 Board Report 10

For any shareholder or concert, the term "**Excess Shares**", as used above, refers to such number of shares comprised in the interest of such shareholder or concert exceeding the Mandatory Disposal Threshold, which is the lesser of: (i) the shares held by such shareholder or concert which represent a percentage of the Company's issued share capital that is equal to the percentage with which the foregoing interest exceeds the Mandatory Disposal Threshold; and (ii) all shares held by such person or concert.

This restriction is included in the Articles of Association to reflect Airbus SE's further normalised governance going forward, aiming at a substantial increase of the free float and to safeguard the interests of Airbus SE and its stakeholders (including all its shareholders), by limiting the possibilities of influence above the level of the Mandatory Disposal Threshold or takeovers other than a public takeover offer resulting in a minimum acceptance of 80% of the share capital referred to below.

Exemptions from Mandatory Disposal Threshold

The restrictions pursuant to the Mandatory Disposal Threshold under the Articles of Association do not apply to a person who has made a public offer with at least an 80% acceptance (including any Airbus SE shares already held by such person). These restrictions also have certain grandfathering exemptions for the benefit of shareholders and concerts holding interests exceeding the Mandatory Disposal Threshold on 2 April 2013 (the "**Exemption Date**"), which is the date of first implementation of the Mandatory Disposal Threshold.

Different grandfathering regimes apply to such shareholders and concerts, depending on the interests and the nature thereof held by each such shareholder or concert on the Exemption Date.

Airbus SE has confirmed that: (i) the specific exemption in article 16.1.b of the Articles of Association applies to Sogepa, as it held more than 15% of the outstanding Airbus SE's voting rights and shares including the legal and economic ownership thereof on the Exemption Date; and (ii) the specific exemption in article 16.1.c of the Articles of Association applies to the concert among Sogepa, GZBV and SEPI, as they held more than 15% of the outstanding Airbus SE's voting rights and shares including the legal and economic ownership thereof on the Exemption Date.

Mandatory public offer under Dutch law

In accordance with Dutch law, shareholders are required to make a public offer for all issued and outstanding shares in Airbus SE's share capital if they – individually or acting in concert (as such terms are defined under Dutch law summarised below), directly or indirectly – have 30% or more of the voting rights (significant control) in Airbus SE. In addition to the other available exemptions that are provided under Dutch law, the requirement to make a public offer does not apply to persons, who at the time the takeover provisions under Dutch law came into force, already held – individually or acting in concert – 30% or more of the voting rights in Airbus SE. In the case of such a concert, a new member of the concert can be exempted if it satisfies certain conditions.

Amendments to the Articles of Association

According to the Articles of Association, resolutions to amend the Articles of Association require a two-thirds majority of the votes validly cast at a general meeting of shareholders, unless they concern amendments to a limited number of provisions thereof, in which case a 75% voting majority will be required. The proposal containing the literal text of a proposed amendment must be available for inspection by shareholders at Airbus SE's headquarters, from the day the meeting is convened until after the end of the meeting.

3.2 Relationship with Principal Shareholders

In 2013, GZBV, a subsidiary of Kreditanstalt für Wiederaufbau ("**KfW**"), a public law institution serving domestic and international policy objectives of the Government of the Federal Republic of Germany, Sogepa and SEPI, entered into a shareholders' agreement (the "**Shareholders' Agreement**"). The Shareholders' Agreement, further details of which are set out below, does not give the parties to it any rights to designate members of the Board of Directors or management team or to participate in the governance of Airbus SE. Airbus SE has also entered into state security agreements with each of the French State and German State, which are also described in more detail below.

Airbus SE / 2021 Board Report 11

3.2.1 CORPORATE GOVERNANCE ARRANGEMENTS

The corporate governance arrangements of Airbus SE were substantially changed in 2013, resulting in changes in the composition of the Board of Directors and its internal rules, as well as amendments to the Articles of Association of Airbus SE. These changes were intended to further normalise and simplify Airbus SE's corporate governance, reflecting an emphasis on best corporate governance practices and the absence of a controlling shareholder group. Changes to Airbus SE's corporate governance arrangements in the Articles of Association, included: (i) disclosure obligations for shareholders that apply when their interests in Airbus SE reach or cross certain thresholds and (ii) ownership restrictions prohibiting any shareholder from holding an interest of more than 15% of the share capital or voting rights of Airbus SE, acting alone or in concert with others (see "- 3.1: Exemptions from Mandatory Disposal Threshold").

3.2.2 SHAREHOLDER ARRANGEMENTS

Grandfathering Agreement

The French State, Sogepa, the German State, KfW and GZBV (all parties together the "**Parties**" and each, individually, as a "**Party**") entered into an agreement with respect to certain grandfathering rights under the Articles of Association. Below is

a summary of such agreement.

Individual Grandfathering Rights

A Party that is individually grandfathered pursuant to Article 16.1.b of the Articles of Association (such Party holding "Individual Grandfathering Rights") shall remain individually grandfathered in accordance with the Articles of Association if the concert with respect to Airbus SE (the "Concert") is subsequently terminated (for instance by terminating the Shareholders' Agreement) or if it exits the Concert.

Loss of Individual Grandfathering Rights

A Party holding Individual Grandfathering Rights as well as any of its affiliates who are grandfathered pursuant to Article 16.1.b in conjunction with Article 16.3 of the Articles of Association (such affiliates holding "Derived Grandfathering Rights", and the Individual Grandfathering Rights and the Derived Grandfathering Rights, together, the "Grandfathering Rights") shall no longer be entitled to exercise their Grandfathering Rights in the event:

- the Concert is terminated as a result of it or any of its affiliates having actually or constructively terminated such Concert;
- or
- it or its relevant affiliate(s) exit(s) the Concert,

and such termination or exit is not for good cause and is not based on material and ongoing violations of the Concert arrangements, including, without limitation, of the Shareholders' Agreement, by the other principal member of the Concert. In the event that in the future the voting rights in the Company of the other principal member of the Concert, together with those of its affiliates, would for an uninterrupted period of three months represent less than 3% of the outstanding aggregate voting rights of Airbus SE, the Grandfathering Rights of the Party, including its affiliates which were no longer entitled to use their Grandfathering Rights, shall from then on revive and Sogepa and GZBV shall jointly notify Airbus SE to that effect.

Notification to the Company

Airbus SE will not be required to take any of the actions provided for in Article 15 of the Articles of Association pursuant to the post-Concert Grandfathering Agreement unless and until it receives: (i) a joint written instruction from Sogepa and GZBV with respect to the taking of any of the actions provided for in Article 15 of the Articles of Association pursuant to the post-Concert Grandfathering Agreement, or (ii) a copy of a binding advice rendered by three independent, impartial and neutral Expert Adjudicators in order to settle any dispute between the Parties arising out of or in connection with the post-Concert Grandfathering Agreement.

Airbus SE will not incur any liability to any of the Parties by taking such actions following receipt of any such joint instruction or binding advice and the Company will not be required to interpret the post-Concert Grandfathering Agreement or any such joint instruction or binding advice. Notwithstanding the description under "Various provisions – Jurisdiction" below, the courts of the Netherlands will have exclusive jurisdiction to resolve any dispute, controversy or claim affecting the rights or obligations of the Company under the post-Concert Grandfathering Agreement.

Airbus SE / 2021 Board Report 12

Various provisions

Termination. The post-Concert Grandfathering Agreement terminates only if either the French State and its affiliates or the German State and its affiliates no longer hold shares in the Company.

Governing law. Laws of the Netherlands.

Jurisdiction. The courts of the Netherlands shall have exclusive jurisdiction. This is binding advice for any dispute, controversy or claim arising out of or in connection with the post-Concert Grandfathering Agreement, in accordance with the procedure set forth in the post-Concert Grandfathering Agreement; provided, however, that application to the courts is permitted to resolve any such dispute controversy or claim.

Governance of the Company

Below is a further description of the Shareholders' Agreement, based solely on a written summary of the main provisions of the Shareholders' Agreement that has been provided to Airbus SE by Sogepa, GZBV and SEPI (all parties together the "Shareholders").

Appointment of the Directors: The Shareholders shall vote in favour of any draft resolution relating to the appointment of Directors submitted to the shareholders' meeting of Airbus SE in accordance with the terms and conditions of the German State Security Agreement and the French State Security Agreement (as described below). If, for whatever reason, any person to be appointed as a Director pursuant to the German State Security Agreement or the French State Security Agreement is not nominated, the Shareholders shall use their best endeavours so that such person is appointed as a Director. Sogepa and GZBV shall support the appointment of one Spanish national that SEPI may present to them as member of the Board of Directors of Airbus SE, provided such person qualifies as an independent Director pursuant to the conditions set forth in the rules governing the internal affairs of the Board of Directors (the "Board Rules"), and shall vote as Shareholders in any Shareholders' meeting in favour of such appointment and against the appointment of any other person for such position. If, for whatever reason, the French State Security Agreement and/or the German State Security Agreement has/have been terminated, KfW or Sogepa, as the case might be, shall propose two persons, and the Shareholders shall exercise their best endeavours so that these persons are appointed as Directors. Directors can be dismissed by the General Meeting at all times.

Modification of the Articles of Association: Sogepa and GZBV shall consult each other on any draft resolution intending to modify the Board Rules and/or the Articles of Association. Unless Sogepa and GZBV agree to vote in favour together of such draft resolution, the Shareholders shall vote against such draft resolution. If Sogepa and GZBV reach a mutual agreement on such draft resolution, the Shareholders shall vote in favour of such draft resolution.

Reserved Matters: With respect to the matters requiring the approval of a Qualified Majority at the Board level ("Reserved Matters"), all the Directors shall be free to express their own views. If the implementation of a Reserved Matter would require a decision of the Shareholders' meeting of Airbus SE, Sogepa and GZBV shall consult each other with a view to reaching a common position. Should Sogepa and GZBV fail to reach a common position, Sogepa and GZBV shall remain free to exercise on a discretionary basis their votes.

Prior consultation: Sogepa and GZBV shall consult each other on any draft resolution submitted to the Shareholders' meeting

other than related to Reserved Matters and the Board Rules.

Balance of interests

The Shareholders agree to pursue their common objective to seek a balance between themselves and their respective interests in Airbus SE as follows:

- ▶ to hold as closely as reasonably possible to 12% of the voting rights for Sogepa, together with any voting rights attributable to Sogepa and/or to the French State, pursuant to Dutch takeover rules except for voting rights attributable due to acting in concert with the other parties;
- ▶ to hold as closely as reasonably possible to 12% of the voting rights for GZBV, together with any voting rights attributable to GZBV and/or to the German State, pursuant to Dutch takeover rules except for voting rights attributable due to acting in concert with the other parties; and
- ▶ to hold as closely as reasonably possible to 4% of the voting rights for SEPI, together with any voting rights attributable to SEPI and/or to the Spanish State, pursuant to Dutch takeover rules except for voting rights attributable due to acting in concert with the other parties.

Airbus SE / 2021 Board Report 13

Mandatory Takeover Threshold

The total aggregate voting rights of the Shareholders shall always represent less than 30% of the voting rights of the Company, or less than any other threshold the crossing of which would trigger for any Shareholder a mandatory takeover obligation (the "MTO Threshold"). In the event that the total aggregate voting rights of the Shareholders exceed the MTO Threshold, the Shareholders shall take all appropriate actions as soon as reasonably practicable, but in any event within 30 days, to fall below the MTO Threshold.

Transfer of Securities

Permitted transfer. Transfer of securities by any Shareholder to one of its affiliates.

Pre-emption right. Pro rata pre-emption rights of the Shareholders in the event any Shareholder intends to transfer any of its securities to a third party directly or on the market.

Call option right. Call option right for the benefit of the Shareholders in the event that the share capital or the voting rights of any Shareholders cease to be majority owned directly or indirectly by the French State, the German State or the Spanish State as applicable.

Tag-along right. Tag-along right for the benefit of SEPI in the event that Sogepa, the French State or any of their affiliates and any French public entity and GZBV, the German State or any of their affiliates and any public entity propose together to transfer all of their entire voting rights interests.

Various provisions

Termination. The Shareholders' Agreement may cease to apply in respect of one or more Shareholders and/or their affiliates, subject to the occurrence of certain changes in its or their shareholding interest in Airbus SE, or in its or their shareholders.

Governing law. Laws of the Netherlands.

Jurisdiction. Arbitration in accordance with the Rules of Arbitration of the International Chamber of Commerce, with the seat of arbitration in The Hague (the Netherlands).

3.2.3 UNDERTAKINGS WITH RESPECT TO CERTAIN INTERESTS OF CERTAIN STAKEHOLDERS

Airbus SE has made certain undertakings and entered into certain agreements in connection with certain interests of its former core shareholders and the German State.

State Security Agreements and Related Undertakings

Airbus SE and the French State have entered into an amendment to the existing convention between them relating to the Company's ballistic missiles business (as so amended, the "**French State Security Agreement**"). Under the French State Security Agreement, certain sensitive French military assets are held by a Airbus SE subsidiary (the "**French Defence Holding Company**"). The French State has the right to approve or disapprove of – but not to propose or appoint – three outside Directors on the Board of Directors of the French Defence Holding Company (the "**French Defence Outside Directors**"), at least two of whom must qualify as Independent Directors under the Board Rules if they are members of the Board of Directors. Two of the French Defence Outside Directors are required also to be members of the Board of Directors of Airbus SE. French Defence Outside Directors may neither (i) be employees, managers or corporate officers of a company belonging to Airbus SE (although they may be members of the Board of Directors of Airbus SE) nor (ii) have material ongoing professional relationships with Airbus SE.

Airbus SE and the German State have entered into an agreement relating to the protection of essential interests to the German State's security (the "**German State Security Agreement**"). Under the German State Security Agreement, certain sensitive German military activities are pursued directly or indirectly by a Airbus SE subsidiary (the "**German Defence Holding Company**"). The German State has the right to approve or disapprove of – but not to propose or appoint – three outside Directors to the Supervisory Board of the German Defence Holding Company (the "**German Defence Outside Directors**"), at least two of whom must qualify as Independent Directors under the Board Rules if they are members of the Board of Directors. Two of the German Defence Outside Directors are required to also be members of the Board of Directors. The qualifications to serve as a German Defence Outside Director are comparable to those to serve as a French Defence Outside Director.

Airbus SE / 2021 Board Report 14

In February 2021, Airbus SE and the Spanish State entered into an agreement relating to the protection of essential security interests to the Spanish State (the "**Spanish State Security Agreement**"). Under the Spanish State Security Agreement, certain sensitive Spanish military assets are held by a Company's subsidiary (the "**Spanish Defence Holding Company**"). Pursuant to the Spanish State Security Agreement, Airbus SE granted the Spanish State a pre-emption right to acquire the sensitive assets as defined under the Spanish State Security Agreement. The pre-emption right applies in case the Spanish Defence Holding Company wishes to sell the sensitive assets to an entity outside Airbus or outside Spain's territory. In such a case, the Spanish State has the right to acquire the sensitive assets.

Dassault Aviation

Airbus SE entered into an agreement with the French State pursuant to which Airbus SE:

- ▶ grants the French State a right of first offer in case of the sale of all or part of its shareholding in Dassault Aviation; and
 - ▶ commits to consult with the French State prior to making any decision at any shareholders' meeting of Dassault Aviation.
- ▶ Airbus SE holds 9.90% of Dassault Aviation's share capital and 6.12% of its voting rights.

Stock Exchange Listings

Airbus SE has undertaken to the parties to the Shareholders' Agreement that, for the duration of the Shareholders' Agreement, Airbus SE's shares will remain listed exclusively in France, Germany and Spain.

Specific Rights

French State: Pursuant to the "French State Security Agreement", Airbus SE has granted to the French State: (a) a veto right, and subsequently, a call option on the shares of Airbus SE performing the ballistic missiles activity exercisable under certain circumstances, including if (i) a third party acquires, directly or indirectly, either alone or in concert, more than 15% or any multiple thereof of the share capital or voting rights of Airbus SE, or (ii) the sale of the shares of such companies carrying out such activity is considered, and (b) a right to oppose the transfer of any such shares.

German State: Pursuant to the "German State Security Agreement", Airbus SE and the German Defence Holding Company have granted to the German State a pre-emption right to acquire the sensitive activities, as defined under the German State Security Agreement. The pre-emption right applies in case the German Defence Holding Company wishes to sell the sensitive activities to an entity outside Airbus SE, or outside the German territory, or the shares of a controlled entity which hosts sensitive activities. In such a case, the German State may acquire the shares of such a controlled entity. Furthermore, the German State has the right to acquire the sensitive activities in case Airbus SE intends to allocate the sensitive activities outside Germany or to give up the sensitive activities.

3.3 Share price performance 2021

In 2021, the Airbus SE share price increased throughout the year to close at € 112.36, up +25%.

After opening at € 92.84 in January, the Airbus SE share price started the year in positive territory and benefited, as for other aerospace and defence stocks, from the recovery of value stocks severely impacted by the COVID-19 crisis. Airbus SE share price was further supported by strong Q4'20 results and by optimism on fewer travel restrictions.

While global equity markets were volatile throughout Q2, due to concern around inflation and the pace of economic recovery, Airbus SE's share price reacted positively to the production plans update on May 27th where it soared +11%.

In Q3, markets remained volatile amid fears of prolonged inflation, central banks' signals they would start reducing bond repurchases and the emergence of supply chain strains. Airbus SE's share price was, however, supported by updated 2021 guidance, announced at the end of July, and reached its highest closing point for 2021 at € 118.00 on the 1st September.

Volatility persisted throughout Q4 as the new COVID-19 Omicron variant emerged in November. This new COVID-19 variant causing milder symptoms than previous variants.

With a 2021 performance of +25%, Airbus SE shares outperformed the Eurostoxx 600 (+22%) and the DAX40 (+16%), as well as aerospace and defence sector (MSCI World Aerospace & Defence +9%) but underperformed the CAC40 (+29%).

3.4 Dividend policy

In December 2013, Airbus formalised a dividend policy demonstrating a strong commitment to shareholder returns. This policy targets sustainable growth in the dividend within a pay-out ratio of 30%-40%.

However, in 2020, the COVID-19 pandemic has severely disrupted the Company's business operations and financial performance. As a result, no dividend was proposed for 2020.

Based on the strong 2021 financial performance, the Board of Directors proposes to reintroduce a dividend payment and will propose to the Annual General Meeting the payment to shareholders on 21 April 2022 of a dividend of € 1.50 per share.

This dividend proposal reflects our Net Income of € 4.2 billion together with our strengthening Net Cash position of € 7.6 billion.

It highlights our ongoing commitment towards sustained dividend growth and increasing shareholder returns. The record date should be 20 April 2022.

4. Corporate Governance

4.1 Management and Control

4.1.1 COMPOSITION, POWERS AND RULES

Under the Articles of Association, the Board of Directors consists of 12 Directors, who each retire at the close of the AGM held three years following their appointment. Under the Board Rules, at least a majority of the members of the Board of Directors (i.e., 7/12) must be European Union nationals ("EU"; any reference in the Board Rules to the EU includes the United Kingdom ("UK") and its constituent countries, notwithstanding a withdrawal of the UK from the EU) (including the Chairman of the Board of Directors) and a majority of such majority (i.e., 4/7) must be both EU nationals and residents. No Director may be an active civil servant. The Board of Directors has one Executive Director and 11 non-Executive Directors. While the Board of Directors appoints the CEO, the CEO is required to be an Executive Director and must be an EU national and resident; therefore it is anticipated that the Board of Directors will appoint as CEO the person appointed by the shareholders as an Executive Director. At least nine of the non-Executive Directors must be "Independent Directors" (including the Chairman of the Board of Directors).

Under the Board Rules, an "Independent Director" is a non-Executive Director who is independent within the meaning of the Dutch Corporate Governance Code (the "Dutch Code") and meets additional independence standards. Specifically, where the Dutch Code would determine non-independence, in part, by reference to a Director's relationships with shareholders who own at least 10% of the Company, the Board Rules determine such Director's non-independence, in relevant part, by reference to such Director's relationships with shareholders who own at least 5% of the Company. According to the criteria of the Dutch Code and the Board Rules, all non-Executive Directors (including the Chairman) presently qualify as an "Independent Director".

The Remuneration, Nomination and Governance Committee (the "RNGC") of the Board of Directors is charged with recommending to the Board of Directors the names of candidates to succeed active Board members after consultation with the Chairman of the Board of Directors and the CEO.

The Board of Directors, deciding by simple majority vote, proposes individuals to the shareholders' meeting of the Company for appointment as Directors by the shareholders' meeting. No shareholder or group of shareholders, or any other entity, has the right to propose, nominate or appoint any Directors other than the rights available to all shareholders under general Dutch corporate law.

In addition to the membership and composition rules described above, the RNGC, in recommending candidates for the Board of Directors, and the Board of Directors in its resolutions proposed to the shareholders' meeting regarding the renewal or appointment of Directors, are both required to apply the following principles:

- ▶ the preference for the best candidate for the position;
- ▶ the preference for gender diversity between equal profiles;
- ▶ the maintenance of an appropriate skills mix and geographical experience;
- ▶ the maintenance, in respect of the number of members of the Board of Directors, of the observed balance among the nationalities of the candidates in respect of the location of the main industrial centres of the Company (in particular among the nationals of France, Germany, Spain and the United Kingdom, where these main industrial centres are located); and
- ▶ at least a majority of the members of the Board of Directors (i.e., 7/12) shall be EU nationals (including the Chairman), and a majority of such majority (i.e., 4/7) shall be both EU nationals and residents (including the UK and its constituent countries, notwithstanding a withdrawal of the UK from the EU).

In accordance with these principles, the Board of Directors shall continue to seek greater diversity with respect to gender, age, geography, education, profession and background.

No changes were made to the membership of the Board of Directors in 2021.

At the end of 2021, the average age of the members of the Board of Directors was 60. The proportion of female representatives is today at 25%. The Board of Directors composition shows a balanced mix of experience with, for example, six members having aerospace industry skills, six having geopolitical skills, nine having finance skills, four having information or data management skills, four having manufacturing and production skills and five having sustainability skills. More details about the diversity of the members of the Board of Directors are available in the table shown on page [20] (*Airbus SE Board of Directors until AGM 2022*).

Airbus SE / 2021 Board Report 17

The Board of Directors is required to take into account, in the resolutions proposed in respect of the renewal or nomination of Directors presented to the shareholders' meeting, the undertakings of the Company to the French State, pursuant to the amendment to the French State Security Agreement, and to the German State, pursuant to the German State Security Agreement, in each case as described more fully above. In practice, this means that at all times the Board of Directors needs to have: (i) two Directors who should also be French Defence Outside Directors (as defined above) of the French Defence Holding Company (as defined above) who have been proposed by the Company and consented to by the French State and (ii) two Directors who should also be German Defence Outside Directors (as defined above) of the German Defence Holding Company (as defined above) who have been proposed by the Company and consented to by the German State.

The RNGC endeavours to avoid a complete replacement of outgoing Directors by new candidates, and draws up an appointment and reappointment schedule for the Directors after consultation with the Chairman and the CEO. In drawing up such a schedule, the RNGC considers the continuity of company-specific knowledge and experience within the Board of Directors, also taking into account that a Director should at the time of his/her appointment or re-appointment not be older than 75 years and ensuring that at least one third of Directors' positions are either renewed or replaced every year for a term of three years. This is to avoid large block replacements of Directors at one single AGM, with the corresponding loss of experience and integration challenges, provided that exceptions to these rules may be agreed by the Board of Directors if specific circumstances provide an appropriate justification for such exceptions.

Voting and rules

Most Board of Directors' decisions can be made by a simple majority of the votes cast by Directors (a "**Simple Majority**"), but certain decisions must be made by a two-thirds majority (i.e., eight favourable votes) of votes cast by the Directors regardless of whether they are present or represented in respect of the decision (a "**Qualified Majority**"). In addition, amendments to certain provisions of the Board Rules require the unanimous approval of the Board of Directors, with no more than one Director not being present or represented (including provisions relating to nationality and residence requirements with respect to members of the Board of Directors and the Executive Committee). However, no individual Director or class of Directors has a veto right with respect to any Board of Directors' decisions.

Powers of the members of the Board of Directors

The Board Rules specify that in addition to the Board of Directors' responsibilities under applicable law and the Articles of Association, the Board of Directors is responsible for certain enumerated categories of decisions. Under the Articles of Association, the Board of Directors is responsible for the management of the Company. Under the Board Rules, the Board of Directors delegates the execution of the strategy as approved by the Board of Directors and the day-to-day management of the Company to the CEO, who, supported by the Executive Committee and its executive leadership team, makes decisions with respect to the management of the Company. However, the CEO should not enter into transactions that form part of the key responsibilities of the Board of Directors, unless these transactions have been approved by the Board of Directors. Matters that require Board of Directors' approval include among others, the following items (by Simple Majority unless otherwise noted):

- ▶ approving any change in the nature and scope of the business of the Company;
- ▶ debating and approving the overall strategy and the strategic plan of the Company;
- ▶ approving the operational business plan of the Company (the "**Business Plan**") and the yearly budget of the Company (the "**Yearly Budget**"), including the plans for investment, Research and Development ("**R&D**"), Employment, Finance and, as far as applicable, major programmes;
- ▶ nominating, suspending or revoking the Chairman of the Board of Directors and the CEO (Qualified Majority);
- ▶ approving of all of the members of the Executive Committee as proposed by the CEO and their service contracts and other contractual matters in relation to the Executive Committee and deciding upon the appointment and removal of the Secretary to the Board of Directors on the basis of the recommendation of the RNGC;
- ▶ approving the relocation of the headquarters of the principal companies of the Company and of the operational headquarters of the Company (Qualified Majority);
- ▶ approving decisions in connection with the location of new industrial sites material to the Company or the change of the location of existing activities that are material to the Company;
- ▶ approving decisions to invest and initiate programmes financed by the Company, acquisition, divestment or sale decisions, in each case for an amount in excess of € 300 million;
- ▶ approving decisions to invest and initiate programmes financed by the Company, acquisition, divestment or sale decisions, in each case for an amount in excess of € 800 million (Qualified Majority);

- ▶ approving decisions to enter into and terminate strategic alliances at the level of the Company or at the level of one of its principal subsidiaries (Qualified Majority);
- ▶ approving matters of shareholder policy, major actions or major announcements to the capital markets; and
- ▶ approving decisions in respect of other measures and business of fundamental significance for the Company or which involves an abnormal level of risk.

Airbus SE / 2021 Board Report 18

The Board of Directors must have a certain number of Directors present or represented at a meeting to take action. This quorum requirement depends on the action to be taken. For the Board of Directors to make a decision on a Simple Majority matter, a majority of the Directors must be present or represented. For the Board of Directors to make a decision on a Qualified Majority matter, at least ten of the Directors must be present or represented. If the Board of Directors cannot act on a Qualified Majority Matter because this quorum is not satisfied, the quorum would decrease to eight of the Directors at a new duly called meeting.

In addition, the Board Rules detail the rights and duties of the members of the Board of Directors and set out the core principles which each member of the Board of Directors shall comply with and shall be bound by, such as acting in the best interest of the Company and its stakeholders, devoting necessary time and attention to the carrying out of his/her duties and avoiding any and all conflicts of interest.

 Sustainability

The Board of Directors makes sure it has the required mix of experience, qualifications, skills and industrial knowledge necessary to assist the Company in formulating and achieving its overall strategy, together with the specific expertise required to fulfil the duties assigned to him or her as member of one of the Board of Directors' committees. The Board of Directors also believes that a diverse composition among its members with respect to gender, experience, national origin, etc. is valuable for the quality and efficiency of its work.

Changes in the composition of the committees in the course of 2021

4.1.2 OPERATION OF THE BOARD OF DIRECTORS IN 2021

Board of Directors meetings

Seven Board of Directors (the "Board") meetings were held in 2021. The average attendance rate at these meetings was 98%. In addition, informal meetings and ad hoc calls took place on specific matters, such as Enterprise Risk Management ("ERM") and certain programmes and the Board was regularly informed of developments through reports from the CEO, including the evolution of the COVID-19 situation at Airbus, the impact of the geopolitical developments and the progress made on major projects, strategic plan implementation and operational activities.

In 2021, an important part of the Board's activities remained directly or indirectly related to the COVID-19 crisis, notably

looking into the definition of the net COVID-19 initiative. The Board continued to review and discuss the operational and necessary financial flexibility in view of potential and significant cash requirements related to the COVID-19 crisis, the Board decided that no dividend proposal would be submitted to the 2021 AGM as it was the case in 2020.

In relation to Commercial Aircraft, the Board's activities comprised inter alia regular reviews of market developments, sales, supply chain matters, production status and ramp-up planning, as well as discussions and decisions concerning the launch of the new A350 Freighter derivative in July 2021. In addition, a particular focus was put on the aerostructure assembly industrial restructuring initiative.

For Defence and Space, the Board activities concerned notably the progress of the Future Combat Air System and Eurodrone programmes, and the challenges and opportunities of the Company in the Space businesses.

With regards to Helicopters, the Board focused its review on the overall market situation, the developments in military projects and on urban air mobility.

The Board dedicated a full session in 2021 to the reviewing of key aspects of the Company's strategy, (and decided to carry out additional and focused strategy sessions for the Defence and Space division in 2022). During this strategy off-site Board meeting, held in Airbus Helicopters' premises in Donauwörth, the Board also visited the industrial site including the Urban Air Mobility development centre, the H135 and H145 assembly lines, and the aircraft doors production site.

Throughout the year, the Board reviewed the Company's financial results and, its forecasts, as well as maintaining an emphasis on both ERM and internal controls.

The Board also reviewed and discussed a number of sustainability matters of major importance to the Company such as safety, notably with the formalisation of a protocol for the sharing of product safety-related information with the Board. Another example is the Greenhouse Gas Scope 3 emissions disclosure which was included, for the first time, in the 2020 Non-Financial Statements.

Human capital matters such as required skills and competences, remuneration and retention schemes, employer attractiveness etc. were frequently addressed or discussed. The Board worked on succession planning of Board members in general, prepared specifically for the appointment of a new non-Executive Director in 2022 and discussed a talent pipeline for future changes within the Board with a strong focus on improving (gender) diversity. In 2021, the Board of Directors also played a key role in management succession planning resulting in the implementation of a number of changes within the Executive Committee of the Company, including the nomination of Sabine Klauke, Chief Technical Officer, Catherine Jestin, EVP Digital and Transformation Management and Alberto Gutierrez, Chief Operating Officer for the Commercial Aircraft business. Following these changes three of the Executive Committee's 12 members are female. In parallel, the Board

Airbus SE / 2021 Board Report 21

performed regular talent reviews, including in person meetings with a number of talents identified as part of the top management succession planning.

Following the settlements reached with the French, UK and US authorities in January 2020 in relation to the Serious Fraud Office / Parquet National Financier / US Department of Justice / US Department of State investigations, the Board of Directors and its Ethics, Compliance and Sustainability Committee remained fully committed and provided full support throughout the year to the post-settlement activities. The Board continued (and will continue) to pay close attention to the Company's active engagement with its shareholders, so that Airbus' approach to governance, compliance and sustainability is well understood and reflects shareholders' expectations to the extent possible.

Board evaluation 2021

The Board of Directors implemented a continuous evaluation process based on a three-year cycle. As part of this process, every three years, a formal evaluation of the functioning of the Board of Directors and its Committees is conducted with the assistance of a third-party expert. In the year succeeding such an outside evaluation, the Board of Directors performs a self-evaluation and focuses on the implementation of the improvement action plan resulting from the third-party assessment. In the intervening second year, the General Counsel, being also the Secretary of the Board, issues a questionnaire and consults with Board members to establish an internal evaluation which is then discussed with them.

Following the decision in 2020 to extend the Board Review cycle for one more year, due to the changes to the Board during 2019 and 2020, the year 2021 was the beginning of a new three-year cycle. The review was carried out between September and December 2021 by an external advisor, Korn Ferry, based on an extensive questionnaire and detailed interviews with each Director. The questionnaire covered Board and Committee processes, Board composition and structure, culture and dynamics, the relationship between the Board and Management, the role of the Chairman, the contribution of the Directors, the strategic alignment of the Board and the value it adds.

The review confirmed the Board's overall strong performance. Directors were found to be committed, experienced and of high calibre, and the Board to be well supported by the Corporate Secretary. Furthermore, the Board is continuing to develop and enhance its capabilities. Its membership offers a diverse mix of experience, business leadership, functional and technical experience, and nationality. The relationships between the Directors themselves and between the Directors and Management have created an environment of constructive challenge as well as direct and straightforward interaction and debate, and the culture is collegiate and collaborative. The Chairman is proactively leading the strategic agenda of the Board and promoting a collaborative culture. He has developed an open, transparent and effective working relationship with the CEO that has been instrumental in improving the impact of the Board. All the Committees are operating well, integrate properly with the governance accountability of the Board, and are led by effective and experienced Committee Chairs.

Notwithstanding this favourable feedback, the review identified some opportunities for the Board to further improve its effectiveness and contribution. These were primarily in the areas of rebalancing the agenda to provide greater scope for strategic debate, improving analysis provided to the Board in support of strategic decision making and portfolio management, including meeting materials, and maximising the value contributed by the Board through deeper engagement and alignment with Management. Also highlighted was the value of providing the Board with access to deeper insights across a range of topics, including geopolitics, technological developments, energy transition and industrial transformation, environmental, social and governance ("ESG") issues, the competitive environment and management succession planning. Finally, continuous efforts should be made to enhance the diversity of the Board across multiple perspectives in order to embrace the challenges of the future.

4.1.3 BOARD COMMITTEES

The Audit Committee

Pursuant to the Board Rules, the Audit Committee, which is required to meet at least four times a year, makes recommendations to the Board of Directors on the approval of the annual financial statements and the interim accounts (Q1, H1, Q3), as well as the appointment of external auditors and the determination of their remuneration. Moreover, the Audit Committee has responsibility for verifying and making recommendations to the effect that the internal and external audit activities are correctly directed, that internal controls are duly exercised and that these matters are given due importance at meetings of the Board of Directors. Thus, it discusses with the auditors their audit programme and the results of the audit of the financial statements, and it monitors the adequacy of the Company's internal controls, accounting policies and financial reporting. It also oversees the operation of the Company's ERM system and keeps a strong link to the Ethics, Compliance and Sustainability Committee. For further details in this regard, see "4.5: Enterprise Risk Management System". Please refer to Annex E of the Board Rules for a complete list of responsibilities of the Audit Committee.

Airbus SE / 2021 Board Report 22

The Chairman of the Board of Directors and the CEO are invited to the Audit Committee meetings. The CFO and the Head of Accounting Record to Report are requested to attend meetings to present management proposals and to answer questions. Furthermore, the Head of Corporate Audit & Forensic and the Chief Ethics & Compliance Officer are requested to report to the Audit Committee on a regular basis.

In 2021, this Committee met five times with an average attendance rate of 95%. It fully performed all of the duties and discussed all of the items described above. In particular, it performed reviews of internal controls, corporate audit (including major findings and audit plan for 2021), accounts (i.e. 2020 full year accounts, 2021 Q1, H1 and Q3 accounts, specific provisions and accounting items, operative planning and forecasts) and independence of external auditors. In addition, regular ERM, legal and compliance updates were presented to the Audit Committee and discussed in meetings. The inclusion of Airbus within the German DAX 40 was also addressed.

The Ethics, Compliance and Sustainability Committee

To reinforce the role and involvement of the Board of Directors on sustainability-related topics, the remit of the former Ethics & Compliance Committee established in 2017 was extended to sustainability matters in July 2020. The Committee was renamed the Ethics, Compliance and Sustainability Committee ("EC&S Committee" or "ECSC") and the Board Rules have been amended accordingly. The main mission of the EC&S Committee is to assist the Board of Directors in overseeing the Company's culture and commitment to ethical business, integrity and sustainability. The EC&S Committee is empowered to monitor the Company's Ethics & Compliance programme, organisation and framework in order to make sure that the Company's Ethics & Compliance governance is effective (including all associated internal policies, procedures and controls). This includes the areas of money laundering and terrorist financing, fraud, bribery and corruption, trade sanctions and export control, data privacy, procurement and supply chain compliance and anti-competitive practices.

The EC&S Committee is also empowered to oversee the Company's sustainability strategy and effective governance and ensure that sustainability related topics are taken into account in the Company's objectives and strategy.

The EC&S Committee makes recommendations to the Board of Directors and its Committees on all Ethics, Compliance or Sustainability-related matters, and is responsible for providing to the Audit Committee any necessary disclosures on issues or alleged ethical and compliance breaches that are financial and accounting-related. The EC&S Committee maintains a reporting line with the Chief Ethics & Compliance Officer, who is requested to provide periodic reports on its activities.

The Chairman of the Audit Committee and the Chairman of the RNGC are members of the EC&S Committee. Unless otherwise decided by the EC&S Committee, the CEO and the Chairman of the Board of Directors are invited to attend the meetings. From time to time, independent external experts are also invited to attend EC&S Committee meetings.

The EC&S Committee is required to meet at least four times a year. In 2021, the EC&S Committee met in total six times with an average attendance rate of 89%. All of the above described items were discussed during the meetings and the EC&S Committee fully performed all the above described duties. In particular, following the settlements reached with the French, UK and US authorities in January 2020 in relation to the Serious Fraud Office / Parquet National Financier / US Department of Justice / US Department of State investigations, the Committee performed regular reviews of the post settlements activities (including compliance and export control updates). Notably, regular updates on the activities of the ITAR Special Compliance Officer, appointed in 2020 under the Consent Agreement with the US State Department and on the monitoring of the Agence Française Anti-Corruption (AFA) were provided. The Committee also held discussions on the management of data privacy at Airbus. Regarding Sustainability, the EC&S Committee discussed the Scope 3 disclosure included for the first time in the 2020 Non-Financial Statement and reviewed the 2021 key priorities, Sustainability roadmaps, dashboard and KPIs. In addition, the EC&S Committee reviewed stakeholders' expectations on Sustainability issues including climate and reporting standards.

The Remuneration, Nomination and Governance Committee

Pursuant to the Board rules, besides its role described in section 4.1.1 above, the RNGC consults with the Chairman and the CEO with respect to proposals for the appointment of the members of the Executive Committee, and makes recommendations to the Board of Directors regarding the appointment of the Secretary to the Board of Directors. The RNGC also makes recommendations to the Board of Directors regarding succession planning (at Board of Directors, Executive Committee and Senior Management levels), remuneration strategies and long-term remuneration plans. Furthermore, the RNGC oversees contractual matters in relation to the members of the Board and the Executive Committee, including the terms and conditions of the relevant contracts, and the preparation of the remuneration policy for approval by the Board. The rules and responsibilities of the RNGC have been set out in the Board rules.

In addition, the RNGC reviews the Company's top talent, discusses measures to improve engagement and to promote diversity, as well as reviewing the remuneration of the Executive Committee members, the Long-Term Incentive Plans ("LTIP"), and the variable pay for the previous year.

Airbus SE / 2021 Board Report 23

Finally, the RNGC performs regular evaluations of the Company's corporate governance and makes proposals for changes to the Board Rules or the Articles of Association.

Unless otherwise decided, the Chairman of the Board of Directors and the CEO are invited to attend meetings of the RNGC. The Chief Human Resources Officer ("**CHRO**") is requested to attend meetings to present management proposals and to answer questions. The CEO leaves the meetings when the RNGC discusses his / her remuneration or personal situation. Pursuant to the Board Rules, the Chair of the RNGC automatically fulfils the function of "**Lead Independent Director**". In this role he / she is responsible for (i) replacing the Chairman in his / her absence at meetings of the Board of Directors, (ii) organising the annual appraisal of the Chairman's performance by the Board of Directors and (iii) acting as an intermediary for and between the other Directors when necessary.

The RNGC is required to meet at least four times a year. In 2021, it met five times with an attendance rate of 100%. It discussed all of the above described items during the meetings and it fully performed all of the above described duties. In particular, the RNGC further discussed the adaptation of the remuneration strategy to properly address the emerging risks of attracting and retaining key talent. The RNGC also continued to work on a 360 feedback exercise for the CEO and to perform reviews of the top management succession plan and, more generally, of key talents. Changes within the Executive Committee were discussed in meetings and implemented in 2021 (see above in the Board of Directors operations section). The Committee held regular discussions on diversity, including gender diversity, in particular at Board and top management levels. The RNGC also worked on the Board of Directors succession plan, with a strong focus on gender diversity.

4.1.4 EXECUTIVE COMMITTEE NOMINATION AND COMPOSITION

The CEO proposes all the members of the Executive Committee of the Company (the "**Executive Committee**") for approval by the Board of Directors, after consultation with (i) the Chairman of the RNGC and (ii) the Chairman of the Board of Directors, applying the following principles:

- ▶ the preference for the best candidate for the position;
- ▶ the maintenance, in respect of the number of members of the Executive Committee, of the observed balance among the nationalities of the candidates in respect of the location of the main industrial centres of the Company (in particular among the nationals of France, Germany, Spain and the United Kingdom, where these main industrial centres are located); and
- ▶ at least two-thirds of the members of the Executive Committee, including the CEO and the CFO, being EU nationals and residents.

Role of CEO and Executive Committee

The CEO is responsible for executing the strategy, as approved by the Board of Directors, and for managing the day-to-day operations of the Company's business with the support of the Executive Committee ("**EC**") and its executive leadership team through Executive Leadership Meetings ("**ELM**") in which the EC members participate. The CEO shall be accountable for the proper execution of the day-to-day operations of the Company's business.

ELMs are held on a regular basis and aim at advising the CEO on his day-to-day role, as well as ensuring that EC members report back on business progress, updates and concerns, addressing Company-wide topics including corporate matters, approving all vacancies and promotions above certain levels.

The EC further supports the CEO in performing these tasks. Under the leadership of the CEO, the EC is responsible for business strategy as well as organisational matters and management of the business, monitoring key projects/ products and major investments, overseeing performance targets, whether it be financial, individual, programmes or support functions, outlining policies to motivate, recruit and retain employees. It is also accountable for regulatory and statutory obligations along with policy matters, communications and market disclosures. It is also the forum where the information or requests for approval destined for the Board of Directors are discussed and approved. The EC members shall jointly contribute to the overall interests of the Company, in addition to each member's individual operational or functional responsibility within the Company.

The EC comprises the heads of the Divisions and key functions of the Company.

The CEO is the only Executive Director within the Board of Directors and represents the Company on the Board of Directors. But, depending on the topic, he usually asks the responsible EC member to join him at Board meetings to present the financials (CFO), programme/product topics (Division heads), HR matters (CHRO) or any other topic where a specialist is needed. This approach allows the Board members to get to know the EC members and equips them to make judgements when it comes to decisions about key positions.

4.2 Conflict of interest

Conflict of interest

The Company has a conflict of interest policy, which sets out that any potential or actual conflict of interest between the Company and any member of the Board of Directors shall be disclosed and, where possible, avoided (please refer to the "Board Rules (Annex D – Article 8: Conflicts of interest)"). This policy is available on the Company's website: www.airbus.com (Company / Corporate Governance / Governance Framework and Documents), as is the related best principle 2.7 of the Dutch Code (as such term is defined in section 4.3 "Dutch Corporate Governance Code" below), which the Company complied with during 2021. Pursuant to the Articles of Association and the Board Rules, a conflicted member of the Board of Directors should abstain from participating in the deliberation and decision-making process relating to the matters concerned. The Board of Directors must approve any decision to enter a transaction where a Director has conflicts of interest that are material to the Company or the individual Director.

In 2021, no transactions were reported. There were, however, related-party transactions: for an overview, please refer to "Notes to the IFRS Consolidated Financial Statements – Note 10: Related Party Transactions".

4.3 Dutch Corporate Governance Code

In accordance with Dutch law and with the provisions of the Dutch Code, which includes a number of non-mandatory recommendations, the Company either applies the provisions of the Dutch Code or, if applicable, explains and gives sound reasons for why they have not been applied.

On 8 December 2016, the Dutch Code was revised; its updated recommendations apply to financial years starting on or after 1 January 2017. The Company welcomed the updates to the Dutch Code and continues supporting its emphasis on topics such as long-term value creation and the importance of culture.

While the Company, in its continuous efforts to adhere to the highest standards, applies nearly all of the current recommendations of the Dutch Code, it must, in accordance with the "comply or explain" principle, provide the explanations below.

For the full text of the Dutch Code, please refer to: www.commissiecorporategovernance.nl.

For the financial year 2021, and in respect of compliance with the Dutch Code, the Company states the following:

1. Securities in the Company as long-term investment

Provision 3.3.3 of the Dutch Code recommends that non-Executive Directors who hold securities in the Company should keep them as a long-term investment.

The Company considers it is altogether unclear whether share ownership by non-Executive Directors constitutes a factor of virtuous alignment with stakeholder interest or may be a source of bias against objective decisions. For this reason, it is at the discretion of the non-Executive Directors to own shares and the Company does not require the non-Executive Directors who hold shares to keep them as a long-term investment.

Provision of 3.1.2 vi of the Dutch Code recommends that the shares awarded to the CEO are held for at least five years after they are awarded. The rules applicable within the Company (as described in section 4.4.2 B e) below) do not impose a minimum of five year holding period for awarded shares; however, the Company believes that potential deviations from this recommendation are significantly limited by the share ownership guideline (set forth in section 4.4.2 B f), under which the CEO is expected to hold throughout his / her tenure Airbus SE shares with a value equal to 200% of his / her Base Salary.

2. Dealings with analysts

Provision 4.2.3 of the Dutch Code recommends meetings with analysts, presentations to analysts, presentations to investors and institutional investors and press conferences shall be announced in advance on the Company's website and by means of press releases. In addition, it recommends that provisions shall be made for all shareholders to follow these meetings and presentations in real time, and that after the meetings the presentations shall be posted on the Company's website.

For practical reasons, the Company does not always allow shareholders to follow meetings with analysts in real time. However, the Company ensures that all shareholders and other parties in the financial markets are provided with equal and simultaneous information about matters that may influence the share price.

Airbus SE / 2021 Board Report 25

3. Gender diversity

On 1 January 2022, new diversity measures entered into force in the Netherlands. Under these new measures, the Company is required to set an appropriate and ambitious target to promote gender diversity on the Board of Directors, among senior management, as well as a plan to achieve that target. Annually, within ten months from the close of the financial year, the Company will be required to report to the Dutch Social Economic Council (Sociaal Economische Raad) on the number of men and women on the Board of Directors and in senior management at the end of the prior financial year, its diversity target, the plan to reach such target and, should the target not have been achieved, the reasons for not meeting such target. The proportion of female representation on the Board of Directors is currently at 25% and the Company targets to increase it to 33% in 2022. Such a proposal is in line with Airbus' willingness to promote gender diversity within its Board of Directors and the Company intends to continue to do so in accordance with the principles mentioned in section 4.1.1 above. The Company will continue to give due consideration to the applicable gender target in its search to find suitable Board candidates and to actively seek female candidates. However, the Company believes that the importance of diversity, in and of itself, should not set aside the overriding principle that someone should be recommended, nominated and appointed for being "the right person for the job".

The Company values diversity in the broadest sense, ranging from gender to ethnicity. To this end, the Company is committed to promoting, supporting and leveraging initiatives to increase the diversity within its workforce, as well as at top management and Board levels. With the support of stakeholder input, the Company is diligently working on building a pipeline of suitable candidates. Through these dedicated programmes, the Company is confident of notably improving gender diversity within a reasonable timeframe. Although the Company has not set specific targets with respect to particular elements of diversity, except for the principles described in 4.1.1 - "Composition, powers and rules" and those targets which apply by law, the Company considers attributes such as personal background, age, gender, national origin, experience, capabilities and skills when evaluating new candidates in the best interests of the Company and its stakeholders.

For information on the operation of the Shareholders' Meeting, its key powers, the shareholders' rights and how such powers and rights can be exercised, see " - 3.1: Shareholding and voting rights – right to attend Shareholders' Meetings".

For information on the composition and operation of the Board of Directors and its respective committees, see " - 4.1.1: Composition, power and rules", " - 4.1.2: Operation of the Board of Directors in 2021", and " - 4.1.3: Board Committees".

For information on (i) significant direct and indirect shareholdings, (ii) holders of shares with special control rights, (iii) rules governing appointment and dismissal of Directors, (iv) amendments to the Articles of Association, and (v) the delegation to the Board of Directors of the power to issue or buy back shares, see " - 3.1: Shareholding and voting rights – Shareholding structure at the end of 2021", " - 3.2: Relationships with Principal Shareholders", " - 4.1.1: Composition, powers and rules", " - 3.1: Shareholding and voting rights – Amendments to the Articles of Association" and " - 3.1: Shareholding and voting rights – Modification of share capital or rights attached to shares".

4.4 Remuneration Report

4.4.1 INTRODUCTION

The RNGC, comprised solely of independent non-executive members of the Board of Directors, is pleased to present the Remuneration Report which comprises the following sections:

Paragraph 4.4.2 presents the Company's remuneration policy ("**Remuneration Policy**") as adopted by the AGM held in 2020 and applicable from 1 January 2020.

Paragraphs 4.4.3 and 4.4.4 respectively describe how the Remuneration Policy was implemented in 2021 in respect of the CEO and of the Non-Executive Members of the Board of Directors.

As a reminder, shareholders endorsed at the 2021 AGM the implementation of the Remuneration Policy during the financial year 2020 through the approval of resolution 5 with a very high level of votes casted in favour. Therefore, the RNGC did not propose any specific changes based on this shareholders' vote.

Note: Whilst this chapter 4.4 is presented as the Company's Remuneration Report, only the disclosure included in (or expressly incorporated by reference into) this paragraph 4.4.1 and paragraphs 4.4.3 and 4.4.4 constitute the remuneration report

Airbus SE / 2021 Board Report 26

(bezoldigingsverslag) for purposes of Section 2:135b of the Dutch Civil Code and will be included as a separate agenda item for an advisory vote at the AGM 2022.

The cumulated remuneration of all Executive Committee Members is presented in the "Notes to the IFRS Consolidated Financial Statements – Note 34: Remuneration". To the extent that any information presented in this note relates to matters referred to in Sections 2:383c through 2:383e of the Dutch Civil Code and is not also described in paragraph 4.4.3, such information is incorporated by reference into this Remuneration Report in order to satisfy the requirements of the Dutch Civil Code.

4.4.2 REMUNERATION POLICY

A – General

The Remuneration Policy covers all members of the Board of Directors: the CEO (who is the only Executive Director) and the other members of the Board of Directors (who are the Non-Executive Directors).

Pursuant to a resolution to that effect, the general meeting may (re)adopt, amend or supplement the Remuneration Policy on the basis of a proposal by the Board of Directors at the recommendation of the RNGC.

The Board of Directors, at the recommendation of the RNGC, may decide to deviate temporarily (and ultimately until the General Meeting adopts an amended version of the Remuneration Policy following the occurrence of such deviation) from any element of the Remuneration Policy as outlined below, if this is necessary to serve the long-term interests and sustainability of the Company or to assure its viability.

The Remuneration Policy in the form set out below in this chapter 4.4.2 has been adopted by the AGM held in 2020 with effect as of 1 January 2020.

Given the positive outcome (with a very high score) of the most recent vote of the Company's general meeting on the current Remuneration Policy, as well as the feedback received from shareholders during dedicated engagements notably on sustainability matters, the Board of Directors does not believe that any amendment to the Remuneration Policy is required this year. The Board of Directors believes that the Remuneration Policy is robust and drives the desired outcome. The Remuneration Policy shall be posted on the Company's website as part of the Company's annual report of the Board of Directors.

B – Executive remuneration – Applicable to the CEO

a) Remuneration philosophy

The Company's remuneration philosophy aims to provide remuneration that will attract, retain and motivate high-calibre executives, whose contribution will ensure that the Company achieves its strategic and operational objectives, thereby delivering long-term sustainable returns for all shareholders and other stakeholders in a manner consistent with the Company's identity, mission and corporate values.

The Board of Directors and the RNGC are committed to making sure that the executive remuneration structure (i) is transparent and comprehensive for all stakeholders; (ii) is consistent and aligned with the interests of long-term shareholders, also taking into consideration the employment conditions of the Company's employees; and (iii) incentivises further the Company's corporate values by basing variable remuneration components also on the achievement of non-financial targets and metrics using environmental, social or governance criteria via the sustainability performance measure.

Before setting the targets to be proposed for adoption by the Board of Directors, the RNGC considers the financial outcome scenarios of meeting performance targets, including achieving maximum performance thresholds, and how these may affect the level and structure of the executive remuneration, as well as potential risks for the Company's business which may result from variable compensation. The Board of Directors shall also consider these aspects, based on the RNGC's recommendations.

Also, before making a recommendation relating to the remuneration of the CEO, the RNGC and the Board of Directors shall take note of the views of the CEO with regard to the amount, level and structure of his or her remuneration.

b) Total direct compensation and peer group

The CEO's total direct compensation ("Total Direct Compensation") comprises a base remuneration ("Base Salary"), an annual variable short-term remuneration ("Annual Variable Remuneration" or "VR") and an award under the long term incentive plan ("LTIP"). The three elements of the Total Direct Compensation are each intended to comprise one third of the total, assuming the achievement of performance conditions is 100% of the applicable targets. The level of the Total Direct Compensation for the CEO (Base Salary, VR and LTIP) is set by reference to the median of an extensive peer group (as described in paragraph 4.4.3 item a) below) and takes into account the scope of the role of the CEO, and the level and structure of executive rewards within the Company. The benchmark is regularly reviewed by the RNGC, with the support of an independent consultant, and is based on a peer group which comprises:

- ▶ global companies in the Company's main markets (France, Germany, UK, Spain and US), excluding financial institutions; and
- ▶ companies operating in the same industries as the Company worldwide.

The elements of the Total Direct Compensation are described below:

Remuneration Element	Main Drivers	Performance Measures	Target and Maximum
Base Salary (in €)	Reflects market value of position.	Not applicable	1/3 of Total Direct Compensation (when performance achievement is 100% of target)
Variable remuneration (in €)	Rewards annual performance based on achievement of Company performance measures and individual objectives.	Collective (50% of VR): divided between EBIT ² (40%); Free Cash Flow ³ (40%) and Sustainability (20%). Individual (50% of VR): Achievement of annual individual objectives, divided between outcomes and behaviour.	The VR is targeted at 100% of base salary for the CEO and, depending on the performance assessment, ranges from 0% to 200% of target. The VR is capped at 200% of Base Salary.
LTIP (in Units and/or Shares)	Rewards long-term commitment and Company performance, and engagement based on financial targets aligned with long-term objectives subject to cumulative performance over a three-year period.	Vesting, subject to performance over a three-year period. In principle, no vesting if cumulative EBIT is negative. If cumulative EBIT is positive, vesting from 50% to 150% of grant based on EPS (75%) and Free Cash Flow (25%).	The original allocation to the CEO is capped at 100% of base salary at the time of grant. Vesting capped at 150% of initial grant (in number of Performance Shares and/or Units). In addition, for the vesting of Performance Units: - overall pay-out is capped at 250% of the original value at the date of grant. - the value that could result from share price increases is capped at 200% of the reference share price at the date of grant.

1 The Company continues to use the term EBIT (Earnings Before Interest and Taxes). It is identical to profit before finance cost and income taxes as defined by IFRS Rules.
 2 Airbus defines the alternative performance measure FCF as the sum of (i) cash provided by operating activities and (ii) cash used for investing activities, less (iii) change of securities, (iv) contribution to plan assets for pension schemes, (v) realised treasury swaps and (vi) bank activities. It is a key indicator which allows the Company to measure the amount of cash flow generated from operations after cash used in investing activities.

The following graphic depicts three relevant scenarios for the outcome of the Total Direct Compensation:

Indications assume a Base Salary of EUR 1.35 million, but the Board of Directors may revise the Base Salary based on the recommendations of the RNGC.
 "Below Threshold" includes annual Base Salary; VR at 0%; LTIIP not vesting.
 "Target" includes Base Salary, VR at target and LTIIP grant face value in cash and/or in shares.
 "Maximum" includes Base Salary; maximum VR value (200% of VR at target); maximum LTIIP cash grant projected at vesting date (250% of grant value); maximum performance applicable to the number of shares granted (150%). The final value of Performance Shares depends on the share price development which is not capped. Illustrative table for a theoretical grant of 50% Shares / 50% Units.

c) Base Salary

The CEO's Base Salary is determined by the Board of Directors, taking into account the peer group analysis mentioned above.

d) Annual Variable Remuneration

The Variable Remuneration is a cash payment that is paid following the end of each financial year, depending on the achievement of specific and challenging performance targets as determined at the beginning of each financial year. The level of the CEO's variable remuneration is targeted at 100% of the Base Salary; it is capped at a maximum level of 200% of the Base Salary. The entire Variable Remuneration is at-risk, and therefore if performance targets are not achieved as per the defined objectives agreed by the Board of Directors, it may mean that no variable remuneration is paid at all. The performance measures that are considered when awarding the variable remuneration to the CEO are split between common collective performance measures and individual performance measures.

Common collective component

The common collective component is based on earnings before interest and taxes ("EBIT") (40%), free cash flow (40%) and sustainability (20%) objectives (the "Common Collective Component"). At the beginning of each year, the Board of Directors sets the targets for these key value drivers at Company and Division levels. The common collective targets relate closely to internal planning and to guidance given to the capital markets (although there may be variations from these). The key value drivers that form the sustainability component will be determined by the Board of Directors and disclosed in the implementation section of the Company's remuneration report for the relevant financial year. They can be related to matters such as health & safety, climate and/or people.

To calculate the common collective annual achievement levels, actual EBIT, free cash flow and sustainability performance are compared against the targets that were set for the year. This comparison forms the basis for computing achievement levels, noting that the actual EBIT, free cash flow levels are occasionally normalised for a limited number of factors which are outside management's control (such as certain foreign exchange impacts or unplanned merger and acquisition activities). The RNGC's intention is to ensure ambitious financial and sustainability targets, and to incentivise the CEO's commitment to meeting these targets.

The graphic below illustrates the Common Collective Component, how it is measured and what the key value drivers are:

Individual component

The individual element ("Individual Component") focuses on outcomes and behaviour (as defined below). Individual performance is assessed in these two important dimensions, which both contribute to the Company's remuneration philosophy. Among other matters, corporate social responsibility and the Company's corporate values are considered as part of this assessment.

- ▶ **Outcomes** encompass various aspects of what the CEO can do to contribute to the success of the business: specific business results he achieves, projects he drives and processes he improves. The individual targets of the CEO are comprehensive and shared with all employees via the top company objectives.
- ▶ **Behaviour** refers to the way results have been achieved, which is also critical for long-term success: how the CEO and

the Board of Directors, as a specific part of CEO behavior assessment (related to equality, compliance, quality and other sustainability matters).

The performance of the Individual Component is measured by the RNGC for the CEO and for all the other members of the Executive Committee.

The RNGC discusses the level of achievement of every single target and derives a combined target achievement level for the outcomes. The behavioural part of the Individual Component is also discussed by the RNGC and constitutes an adjustment factor for the target achievement of the outcomes. Finally, the RNGC proposes to the Board of Directors the compound Individual Component of the CEO target achievement made up from the outcomes and behavioural achievements.

e) Long-Term Incentive Plan

The CEO participates in the Company's LTIP in order to increase the alignment with shareholders' interests. The LTIP allows the award of performance units ("Performance Units" or "Units") and/or performance shares ("Performance Shares" or "Shares").

The value of the CEO's LTIP allocation is capped at 100% of the Base Salary at the date of grant and subject to performance conditions. The achievement of the performance criteria is assessed by the RNGC after a three-year period, based on relevant financial criteria during this period of three years with stringent targets set in advance and agreed by the Board of Directors at the recommendation of the RNGC.

At the end of this three-year period, the grant is subject to a performance calculation to determine whether and to what extent it should vest. Depending on this calculation (i) Performance Units will vest in two tranches, the payment of which takes place approximately six and 18 months following the end of the performance period and (ii) Performance Shares will vest in one tranche, approximately six months following the end of the performance period. This is depicted in the graphic below:

The level of vesting of Performance Shares and Units is subject to the following performance measures:

- ▶ 0-50% of the allocation: In principle, this element of the Performance Unit/Share award will not vest if the Company reports negative cumulated EBIT results. Nonetheless, in case the Company's EBIT results are impacted by exceptional and unpredictable circumstances, the Board of Directors, upon recommendation of the RNGC, may decide that a maximum portion of 50% of the allocation will vest;
- ▶ 50-150% of the allocation: This element of the Performance Unit/Shares vests based on the two following performance criteria: average earnings per share (75%) ("Earnings per Share" or "EPS") and cumulative free cash flow (25%).

Earnings per Share (75%) Average over 3 years, €	Free Cash Flow (25%) Cumulated over 3 years, M€
<ul style="list-style-type: none"> ▪ Measures profitability ▪ Driven by net income and number of shares 	<ul style="list-style-type: none"> ▪ Measures cash generation ▪ Driven by cash provided by/used for operating and investment activities

The vesting of Performance Units and Shares is subject to the following maximum cap:

- ▶ the maximum level of vesting is 150% of the number of Units/Shares granted.

The vesting of Performance Units is subject to the following maximum caps:

- ▶ the value that could result from share price increases is capped at 200% of the reference share price at the date of grant; and
- ▶ the overall pay-out is capped at 250% of the value at the date of grant.

Performance Units and Performance Shares that vest in accordance with the terms and conditions applicable to them are settled without further action being required by the beneficiary.

For each payment in cash, one Unit is equal to the value of one Company share at the time of vesting. The Company share value is the average of the opening share price, on the Paris Stock Exchange, during the 20 trading days preceding and including the respective vesting dates.

f) Share ownership guideline

The Board of Directors has established a share ownership guideline pursuant to which the CEO is expected to acquire Airbus SE shares with a value equal to 200% of the Base Salary and to hold them throughout his or her tenure.

g) Benefits

The benefits offered to the CEO are similar to the benefits granted to other executives of the Company and comprise, among other matters, medical, death and disability coverage (both through a social security system or a company plan, depending on the contractual agreement with the CEO), a company car and usual facilities.

Unless the law provides otherwise, the costs and expenses of the CEO are covered, including reasonable costs of defending claims, under the conditions set forth in the insurance policy subscribed by the Company. Under circumstances excluded by the insurance policy, such as an act or failure to act by the CEO that can be characterised as intentional, intentionally reckless,

or seriously culpable, there will be no entitlement to any coverage.

h) Retirement

The CEO is entitled to retirement benefits through mandatory applicable state and collective pension plans.

Airbus SE / 2021 Board Report 31

The CEO participates also in a Company pension contributions based plan. This plan consists of an annual pension contribution of 20% of the annual pensionable remuneration (as described in paragraph 4.4.3 item h) below) subject to applicable local practices (if any).

i) Clawback

In accordance with Dutch law, the Board of Directors may adjust a "bonus" (as defined under Dutch law, including short-term remuneration and awards under the Long-Term Incentive Plan subject to performance criteria) awarded to the CEO to a suitable level, if payment or satisfaction of that bonus would be unacceptable under the standards of reasonableness and fairness. Also, the Company may reclaim a bonus already paid, in whole or in part subject to applicable local legal requirements, if any, to the extent that such payment was made on the basis of incorrect information regarding the achievement of the targets, objectives and/or conditions underlying the bonus or regarding the circumstances on which the bonus was dependent. The Non-Executive Directors, or a special representative designated by the general meeting, may demand such repayment on the Company's behalf.

Any such adjustment or clawback will be reported in the notes of the relevant financial statements of the Company.

j) Loans

The Company does not provide loans or advances to the CEO.

k) Severance

In case of termination of the CEO's duties at the initiative of the Board of Directors, the CEO shall be entitled to an indemnity equal to one (1) time the last Total Annual Remuneration (defined as Base Salary and VR most recently paid) subject to applicable local legal requirements if any, and provided that the performance conditions (as described in paragraph 4.4.3 item k) below) assessed by the Board of Directors have been fulfilled. If the CEO's appointment as member of the Board of Directors terminates within a period of 12 months or less prior to his retirement date, the termination indemnity will be limited by pro-rating its amount. This will not apply if the CEO's mandate is terminated for cause (misconduct), in case of resignation or termination on or after his retirement date.

The CEO's appointment terms and conditions include a non-compete clause, which applies for a maximum of one year. The compensation under the non-compete clause is equal to 50% of the last total annual remuneration (defined as Base Salary and VR most recently paid), subject to applicable local legal requirements if any and paid in monthly instalments.

Past LTIP awards may be maintained, in such cases as retirement or if a mandate is not renewed by the Company for a reason other than cause (misconduct). The vesting of past LTIP awards follows the rules and regulations of the LTIP including performance conditions and is not accelerated in any case. LTIP awards are forfeited for executives who leave the Company at their own initiative, but this is subject to review by the Board of Directors.

The term of the CEO's appointment is linked to his or her mandate as a member of the Board of Directors. The termination of the CEO's appointment may be subject to a notice period of six months, except if the CEO's appointment is terminated for cause (misconduct), in which case the CEO's appointment may be terminated immediately, or in case of non-renewal of the CEO's mandate by the general meeting.

C — Non-Executive remuneration – applicable to Non-Executive Directors

The Company's Remuneration Policy with regard to Non-Executive Directors aims at ensuring fair compensation and protecting the independence of the Board's members. Their remuneration should be commensurate to the time spent and the responsibilities of their role on the Board of Directors.

Fees and entitlements

Non-Executive Directors are entitled to the following remuneration components:

- ▶ a base fee for membership or chair of the Board of Directors;
- ▶ a Committee fee for membership or chair on each of the Board's Committees;
- ▶ an attendance fee for the attendance of Board meetings (subject to such conditions as may be imposed by the Board of Directors at the recommendation of the RNGC); and
- ▶ an attendance fee for the attendance of Committee meetings if and when such Committees would have more than four Committee meetings per year (whether these meetings are held physically or by phone).

Airbus SE / 2021 Board Report 32

Each of these fees is a fixed amount that is determined by the Board of Directors from time to time, at the recommendation of the RNGC.

Committee chairmanship and Committee membership fees are cumulative if the concerned Non-Executive Director belongs to two different Committees. Fees are paid twice a year at the end of each semester (as close as possible to the Board meeting dates).

Non-Executive Directors do not receive any performance or equity-related compensation, and do not accrue pension rights with the Company in the frame of their mandate, except what they would receive in the frame of a current or past executive mandate. These measures are designed to ensure the independence of Board Members and strengthen the overall effectiveness of the Company's corporate governance.

The Company does not encourage Non-Executive Directors to purchase Airbus SE shares.

The Company does not provide loans or advances to the Non-Executive Directors.

Unless the law provides otherwise, the Non-Executive Directors shall be reimbursed by the Company for various costs and expenses, including reasonable costs of defending claims. Under certain circumstances, such as an act or failure to act by a Member of the Board of Directors that can be characterised as intentional, intentionally reckless, or seriously culpable, there will be no entitlement to this reimbursement.

4.4.3 IMPLEMENTATION OF THE REMUNERATION POLICY IN 2021: CEO

This paragraph 4.4.3 describes how the Remuneration Policy was implemented in 2021 with respect to the CEO (Mr Guillaume Faury). As a reminder, the AGM held in 2020 approved the Remuneration Policy through resolution five with a very high level of support.

In line with the Remuneration Policy and the expectation of the RNGC and the Board of Directors, the philosophy of the remuneration policy aims to provide remuneration that will attract, retain and motivate high-calibre executive, while taking into account best practices as well as employee and shareholder considerations. It should help to ensure that the Company achieves its strategic and operational objectives, thereby delivering sustainable returns for all shareholders and other stakeholders in a manner consistent with the Company's identity, mission and corporate values.

a) Benchmarking

The latest benchmark was performed in July 2021 at RNGC and Board of Directors request.

The new relevant peer group from this last benchmark, based on Willis Towers Watson database, is composed of 55 companies [1] selected from CAC40 in France, DAX 40 (formerly DAX 30) in Germany, FTSE 100 in the UK, IBEX 35 in Spain and DJ 30 in the US having comparable economic indicators such as revenues, number of employees and market capitalisation and providing perspective on compensation practices from direct or indirect competitors. Financial institutions were excluded from this peer group.

(1) **France** : Total, Sanofi, Safran SA, Air Liquide, Stellantis, Danone, Schneider Electric, Saint-Gobain, Vinci, Engie, Thales, Dassault systèmes

Germany: Bayer, Volkswagen, Daimler, BASF, Deutsche Telekom, Siemens, BMW, Continental, E.ON, Henkel, Deutsche Post, SAP

Spain: Iberdrola, Endesa, Siemens Gamesa, Santander, Telefónica, Naturgy, Repsol, Banco Bilbao, Inditex, Ferrovial SA

UK: Shell, BP, BAT, GSK, Rio Tinto, Vodafone, Bae Systems, Rolls Royce, Diageo, Unilever, Tesco

US: Boeing, Lockheed, Raytheon, General Dynamics, Northrop Grumman, GE, Caterpillar, 3M, IMB, Fedex

Based on the conclusion of the independent expert who ran the benchmark, the total direct compensation (TDC) of the CEO is below the median level of the peer group.

In line with the Company's Remuneration philosophy, the conclusion of this benchmarking exercise was duly taken into account by the RNGC and the Board of Directors when setting the remuneration of the CEO.

In addition to external benchmark, the RNGC considers also the remuneration of employees through the review of the evolution of the pay-ratio (see 4.4.3 item (j)).

b) Base Salary

The 2021 CEO Base Salary level on a full year basis is unchanged compared to 2020 and amounts to € 1,350,000 (lowered from the Base Salary of the former CEO: € 1,500,000 in 2019).

Airbus SE / 2021 Board Report 33

c) Annual Variable Remuneration

As stipulated in the Company's Remuneration Policy, the CEO's VR is targeted at 100% of the Base Salary and capped at 200% of the Base Salary. It is subject to the fulfilment of collective and individual performance targets.

For 2021, the VR of the CEO amounts to an aggregate of € 2,241,000 composed of € 1,296,000 (192%) for the Common Collective Component and € 945,000 (140%) for the Individual Component.

Performance achievement – Common Collective Component

According to the policy applicable for the financial year 2021, the Common Collective Component for the Company consolidated achievement amounts to 192%. It is based on an achievement of 200% of target EBIT, 200% of target free cash flow, and 161% of target sustainability (which is based on achievement of 200% of target reduction of CO2 emissions and

122% of target reduction of FR1). These criteria apply to all executives having a Common Collective Component in their variable remuneration.

Maximum level of achievement for EBIT / free cash flow was driven by Airbus Commercial very strong performance and good performance of Airbus Helicopters and Airbus Defence & Space in a context of quicker than expected post COVID-19 recovery. Normalisations were made to exclude exceptional financial impacts such as currency exchange differences.

Sustainability targets are measured by two criteria: the rolling lost time injury frequency rate ("FR1" which is the monthly number of lost time injuries per million worked hours averaged over 12 months) and the reduction in CO2 emissions ("CO2 Avoidance"), each weighted for 10% of the Common Collective Performance.

- In 2021, the consolidated rolling FR1 decreased from 3.61⁽¹⁾ to 3.06 leading to an overall achievement of 122%⁽²⁾

⁽¹⁾ restatement of 2020 actual figure of 3.81 due to increased scope

⁽²⁾ based on the weight of each business

- In 2021, the CO2 emission decreased by 6% (762 ktons), which is above the targeted reduction of 3%, leading to an achievement of 200%

The high level of reduction in FR1 and CO2 emissions at group level is confirming the successful and faster than anticipated year over year reduction target.

For 2022, the Board of Directors decided to maintain the sustainability component as follows: FR1 for 50% and CO2 avoidance for 50%. The target for 2022 is a reduction of FR1 by 15% in Airbus Commercial and 10% in Airbus Defence and Space and 10% at Airbus Helicopters versus our actuals 2021 rolling FR1 and a reduction of CO2 emissions of our industrial sites and operations by 5%.

Performance achievement – Individual Component

The Individual Component in 2021 results from an achievement level of 140%, assessed by the RNGC and approved by the Board of Directors on the basis of achievement demonstrated on different criteria defined at the beginning of the year, as summarised in the table below:

OBJECTIVE	TARGET	Weight %	Achievements %
Outcomes element			
2021 Top Company Objectives	- Customer - Industrial Performance - People - Sustainability - Enable the Future	30%	128%
	- Prepare Airbus for post COVID-19 - Consolidate our market position in commercial aviation - Secure / Finalise the key strategic military programmes - Environment, Social and Governance - Set Airbus onto the right trajectory for the future	40%	150%
Behaviour element			
Personal Focus	- Ethics & Compliance - Personal Development - Leadership Team Development	30%	140%
		100%	140%

The Individual component has been assessed according 3 sets of complementary objectives:

- Top Company Objectives Assessment – accounting for 30% of the total Individual Component
- CEO Personal objectives – accounting for 40% of the total Individual Component
- CEO Personal Focus – accounting for 30% of the total Individual Component

I. Outcomes element

A. 2021 Top Company Objectives

They have been defined, structured around 5 clusters:

- Customer
- Industrial Performance
- Financial Performance
- People
- Sustainability
- Enable the Future

A series of KPIs and associated targets have been set at the beginning of the year, for each of the clusters.

Each of the KPIs have been measured and compared to target, leading to a global measurement of the TCOs achievement at 128% of the targets, as per details shown on the table “summary CEO achievement – Individual Component” at the beginning of this chapter.

B. CEO Personal Objectives

Consistently with the TCOs, Individual Objectives have been set up specifically for the CEO. They are structured around 5 priorities, detailed below.

Each of the priorities have been assessed by the RNGC leading to a global achievement of 150% for the Personal Objectives, as per details shown on the table “summary CEO achievement – Individual Component”.

The main and most noticeable factors for each of the 5 priorities determining the achievement level of CEO Personal Objectives included, but not limited to:

Airbus SE / 2021 Board Report 35

1. Prepare Airbus for post COVID-19

- Despite disruption within the Supply Chain, achieved a strong alignment to secure single aisle family ramp up
- A total of 611 commercial aircraft were successfully delivered, in line with 2021 delivery Guidance
- Restructuring of our industrial set up, as an enabler of increased competitiveness

2. Consolidate our market position in commercial aviation

- A strong single aisle market position achieved with 49% of market share and 24% of widebody market share including the launch of the A350 Freighter programme
- Gross commercial aircraft orders totalled 771 with net orders of 507 aircraft after cancellations.
- This year, the WTO dispute has been settled, putting an end to 17 years discussions with the US.

3. Secure / Finalise the key strategic military programmes

- Eurodrone's negotiations successfully completed in 2021 resulting in a signature of the contract in February 2022.
- Tiger MKIII contract signed
- Future Combat Air System (“FCAS”), negotiations with the partner companies and customers are ongoing

4. Environment, Social and Governance

- Leading the decarbonisation of the aerospace sector aiming to bring the first zero emission commercial aircraft to market by 2035. To this end, the Company's CO2 emissions decreased by 6% (762 ktons), which is above of the targeted reduction of 3%.
- Enhancing the current product and services portfolio contributing positively to climate change mitigation and adaptation.
- Strong focus to push our Health and Safety standards towards industry benchmarks, through standard processes deployment, and extensive training tailored to different population. As a result, FRI target over-achieved.
- My Working Environment Survey in order to measure engagement of our employees, and roadmap defined in order to tackle main pain points (see details in Chapter 6).

5. Set Airbus on the right trajectory for the future

- Internal Transformation Programme has been (re)launched, and reset in a Post COVID-19 world. “Next Chapter Rewired” is focusing on creating the conditions for next generation digital and decarbonized products and services.

II. Behaviour element

The “behaviour element” accounts for 30% of the total Individual Component and has been assessed around 3 axis:

- Ethics & Compliance
- Personal Development
- Leadership Team Development

Each of the priorities have been assessed by the RNGC leading to a global achievement of 140% for the Personal focus Objectives, as per details shown on the table “summary CEO achievement – Individual Component”.

1. Ethics & Compliance

Ethics & Compliance (E&C) continues to be a key focus area for the Company and the way the business is done:

- Dedicated E&C focus during monthly executive and leadership meetings in February 2021, May 2021 and December 2021.
- Dedicated Export Control session during the February Executive Committee.
- Dedicated E&C workshop in December at Executives Leadership Meeting (ELM).

From 1 October 2020 to 30 September 2021, the Company's employees followed 284,774 Ethics & Compliance e-learning sessions. In 2021, 90% higher risk third parties were trained on Ethics & Compliance requirements and expectations.

2. Personal Development

The CEO is leading by example and has set axis of development supported by a coach following feedback sessions performed with his team members.

Airbus SE / 2021 Board Report 36

3. Leadership Team Development

The new composition of the Executive Committee has been implemented, including the nomination of Sabine Klauke, Chief Technical Officer, Catherine Jestin, EVP Digital and Transformation Management and Alberto Gutierrez, Chief Operating Officer for the Commercial Aircraft business. Furthermore, internal succession plans and training opportunities were reviewed to ensure that the strength of the Company' internal talent remains engaged and monitored.

d) Long-Term Incentive Plan

2021 Grant

In 2021, under the Company's LTIP, the Board decided to grant only Performance Shares, and no Performance Units. This applies to the CEO as well as to all beneficiaries of LTIP. The value of the Performance Share award has been capped at 100% of the Base Salary, in line with the current Remuneration Policy as validated by the AGM 2020, which then represents one third of the CEO's target Total Direct Compensation. The table below gives an overview of the Performance Shares granted to the CEO in 2021 pursuant to the LTIP:

Share plan: number of Performance Shares		
	Granted in 2021	Vesting dates
Guillaume Faury	12,121	Vesting schedule is made up of 1 tranche expected in May 2025

The grants in 2021 were performed in compliance with the performance measures (average EPS (75%) and cumulative FCF (25%)) described in paragraph 4.4.2 B item e). As per the current Remuneration Policy, the Performance Shares granted in 2021 will vest in one tranche (in May 2025).

Vesting values in 2021

In 2021, the CEO received both cash payments and vested shares in connection with the vesting of 2016 and 2017 LTIP awards:

- ▶ **Cash:** the total cash payment to the CEO amounted to € 324,509 in 2021.
- ▶ **Shares:** in connection with the 2017 LTIP award, the CEO received 2,202 vested shares on 5 May 2021.

LTIP overview: granting and vesting

Date of grants	Grant Type	Number	Share price at grant date	Value at grant date	Performance achievement	Units with performance achievement	Dates of vesting	Share value at vesting dates(*)
2016	Units	5,696	€ 52.67	€ 300,008	75%	4,272	2 vestings in 2020 - 2021	1st vesting 7 May 2020 € 56.27 2nd vesting 5 May 2021 € 100.25
2016	Shares	5,696	€ 52.67	€ 300,008	75%	4,272	1 vesting in 2020	7 May 2020 € 53.80
2017	Units	4,404	€ 73.81	€ 325,059	50%	2,202	2 vestings in 2021 - 2022	1st vesting 5 May 2021 € 100.25
2017	Shares	4,404	€ 73.81	€ 325,059	50%	2,202	1 vesting in 2021	5 May 2021 € 97.58
2018	Units	4,208	€ 106.94	€ 450,004	Not yet known	Not known	2 vestings in 2022 - 2023	Not yet known
2018	Shares	4,208	€ 106.94	€ 450,004	Not yet known	Not known	1 vesting in 2022	Not yet known
2019	Units	5,530	€ 122.06	€ 674,992	Not yet known	Not known	2 vestings in 2023 - 2024	Not yet known
2019	Shares	5,530	€ 122.06	€ 674,992	Not yet known	Not known	1 vesting in 2023	Not yet known
2020	Units	9,920	€ 68.04	€ 674,957	Not yet known	Not known	2 vestings in 2024 - 2025	Not yet known
2020	Shares	9,920	€ 68.04	€ 674,957	Not yet known	Not known	1 vesting in 2024	Not yet known
2021	Shares	12,121	€ 111.38	€ 1,350,037	Not yet known	Not known	1 vesting in 2025	Not yet known

Calculations may involve rounding to the nearest unit.

* Vesting will occur according to the respective rules and regulations of each plan.

100% of units and shares granted since 2016 are conditional to the achievement of performance conditions

NOTE: 2016 to 2018 awards were granted to Mr Faury before his appointment as CEO and should vest during his mandate.

Performance Conditions of LTIP 2018:

- ▶ The performance conditions for LTIP 2018 were determined as follows: if the Company reports a positive cumulative EBIT, a minimum portion of 50% of the Performance Units / Shares vest. If the Company reports a negative cumulative EBIT resulting from exceptional circumstances, the Board of Directors can decide at its sole discretion to vest a maximum

Airbus SE / 2021 Board Report 37

portion of 50% of the Performance Units / Shares.

- ▶ 50% to 150% of the allocation would be granted depending on the compounded achievement of the two following performance criteria:
 - 75% of average EPS ("Ave EPS"): determined on a linear basis depending on three-year Ave EPS for the 2018, 2019 and 2020 fiscal years, with the three-year Ave EPS target for an allocation of 100% equal to € 6.73; and
 - 25% of cumulative FCF ("Cum FCF"): determined on a linear basis depending on three-year Cum FCF for the 2018, 2019 and 2020 fiscal years, with the three-year Cum FCF target for an allocation of 100% equal to € 13,000 million.

Review of achievement of performance conditions:

On 16 February 2022, the Board of Directors noted the achievement of the performance conditions of the 2018 plan, i.e. for the 2019, 2020 and 2021 fiscal years. The three-year average EPS was € 2.27 and the three-year Cum FCF was € 3,230 million, after normalisation to align them with policies in force when setting the target (notably IFRS 15 and A220 impacts).

Shares awarded to the CEO in 2021 are subject to a performance condition. The condition is that the CEO's performance in 2021 is at least 50% of the target. The condition is not met due to the sanitary crisis leading to no vesting above 50%.

For reasons of confidentiality, the precise targets set for the average EPS and cumulative free cash flow, even though they have been properly established and validated in a suitable manner, cannot be publicly disclosed as these objectives are considered as competitive sensitive information. Nonetheless, in the spirit of providing the highest level of transparency to our shareholders and to adhere to best practices, retrospective information demonstrating the stringency of the targets set by the Board of Directors is provided for the previous LTIP, as follows:

Date of grants	KPI	Number of units	Target for a 100% allocation	Achieved	Performance achievement in percentage	Compounded performance achievement in percentage	Resulting vesting in number	For comparison, average EPS for the last 3 reported years at the date of grant
2016	Ave EPS	11,392	€ 4.40	€ 3.35	50%	75%	8,544	€ 2.76*
	Cum FCF		€ 5,774m	€ 11,218m	150%			
2017	Ave EPS	8,808	€ 6.00	€ 1.83	50%	50%	4,404	€ 2.28**
	Cum FCF		€ 9,339m	€ 4,331m	50%			
2018	Ave EPS	8,416	€ 6.73	€ 2.27	50%	50%	4,208	€ 2.81***
	Cum FCF		€ 13,000m	€ 3,230m	50%			

* Average EPS of 2015, 2014 and 2013. ** Average EPS of 2016, 2015 and 2014. *** Average EPS of 2017, 2016 and 2015

Based on the above, the ratio between the fixed part of the remuneration of the CEO in 2021 (Base Salary, annual contribution to the Company's defined contribution pension plan and benefits) and the variable part of the remuneration (Variable Remuneration related to 2021 paid-out in 2022 and LTIP vesting in 2021) is 41% / 59% (versus 49% / 51% in 2020).

e) Share ownership

The CEO owned 24,495 Airbus SE shares on 31 December 2021. The CEO has reached the target of 200% of the Base Salary in 2021 thanks to a personal investment plan in Airbus SE shares.

Please refer to the AFM website www.afm.nl for any further information related to the transactions of the CEO.

f) Employee Share Ownership Plan (ESOP)

In March 2021, the Company offered all eligible employees the opportunity to subscribe to a share matching plan, through which the Company matches a certain number of directly acquired shares with a grant of matching shares. This ratio varies depending on the number of shares acquired at fair market value by the employees, with a maximum discount of 44%. The total offering was up to 2.2 million shares of Airbus SE, open to all qualifying employees. Information about the plan can be found on the Company's website.

Under the umbrella of the ESOP 2021, a dedicated UK tax advantageous Share Incentive Plan ("SIP") was also deployed in March 2021.

Although the CEO was eligible for the plan, he did not participate in the ESOP 2021 plan leaving more shares for employees in order to favour the development of employee shareholding.

g) Benefits

Costs of benefits provided through applicable mandatory collective and social security plans are accounted for among social charges (please refer to Note 34 to the IFRS Consolidated Financial Statements for further details). The monetary value of other benefits provided to the CEO in 2021 amounts to € 32,479 (vs € 33,790 in 2020).

h) Retirement

Until the end of 2019, the retirement benefit of the CEO accrued through a defined benefit commitment. Following the Board of Directors decision approved in the AGM 2020, the accrued pension rights under this commitment have been frozen based on the seniority of the CEO as Executive Committee member at the end of 2019. A replacement target ratio has therefore been set at 52% of his Base Salary (i.e. 26% of the sum of his Base Salary and his target VR) and will no longer accrue. The pension rights under this commitment remain unvested until the retirement date of the CEO.

The pension rights arising from the Company's defined contribution plan (i.e. contribution of 20% of the pensionable remuneration, which is the Base Salary and the most recently paid VR) are deducted from the frozen pension rights described above.

The present value of the remaining CEO's pension obligation related to the frozen defined benefit commitment is estimated annually by an independent actuarial firm according to the international accounting standard IAS19 as applied by the Company for post-employment benefits. As of 31 December 2021, the defined benefit obligation amounted to € 9,046,433 (€ 9,423,777 in 2020). This obligation has been accrued in the 2021 Consolidated Financial Statements and will be updated annually up to the retirement date of the CEO considering future changes on economic assumptions or other factors like salary increase.

For the fiscal year 2021, the cost related to the CEO's pension rights accrued under Company's plans during the year represented an expense of € 1,138,794 (versus € 1,179,332 in 2020).

The annual cost of pension rights accrued under applicable mandatory collective and state pension plans are accounted for among social charges (please refer to Note 34 to the IFRS Consolidated Financial Statements for further details).

i) Clawback

The Board of Directors did not apply any clawback in 2021.

j) Pay ratio

The Dutch Corporate Governance Code recommends that the Company provides a ratio comparing the compensation of the CEO and that of a "representative reference group" determined by the Company.

The Company's pay ratio is calculated by comparing the compensation of the CEO with the average compensation of full-time equivalent permanent employees from France, Germany, the UK and Spain for the Company, excluding subsidiaries

(encompassing around 99,000 employees).

Taking into account stakeholders expectations, the aggregate compensation over the fiscal year that was used as a reference amount has changed to calculate the 2021 ratio: in addition to the gross sum of the Base Salary, annual bonus, profit and success sharing, overtime, premium for work conditions and other premiums that was taken into account in previous calculations, the social charges, the value of benefits and pension contributions and the face value of LTIP at grant date have been included.

Based on this new methodology, the ratio between the compensation of the CEO (including base salary, variable remuneration, social charges, benefits, pension contributions and LTIP grant face value) and the average compensation of full-time equivalent permanent employees for the fiscal year to which this report relates is 59 (for 2020: 58 based on the new methodology as described above) (rounded to the nearest integer).

Note for information: The evolution of the pay-ratio between 2020 and 2021 based on the new methodology has been considered by the RNGC when discussing the CEO remuneration for 2022.

k) Severance

No payment has been made to the CEO in 2021 related to severance or other termination indemnity.

Under the current CEO's appointment terms and conditions, the payment of an indemnity in case of termination would be subject to performance conditions. These conditions would be fulfilled if the collective and individual components of the VR for the last 2 financial years preceding the financial year during which the termination occurs have been assessed by the Board of Directors at 100% or more.

Airbus SE / 2021 Board Report 39

l) Development of the compensation

The table below provides an overview of the development of the direct cash compensation paid to the CEO during a financial year composed by the Base Salary plus the VR (as defined below) and of the Employee Compensation (as defined below).

Financial year	2021	2020	2019	2018	2017
I. CEO's direct cash compensation					
Annual Base Salary (k€)	1,350	1,350	1,392(1)	1,500	1,500
VR (k€) (2)	1,404	1,553	2,318	2,168	1,913
Total	2,754	2,903	3,710	3,668	3,413
Annual Variation	-5.1%	-21.8%	+1.1%	+7.5%	-0.6%
II. Long Term Incentive Plan (k€) (3)					
	1,350	1,350	1,350	-	1,500
III. Company Performance					
EBIT Adjusted (m€)	4,865	1,706	6,946	5,834	4,253
Annual Variation	+185%	-75%	+19%	+37%	+8%
FCF before M&A and customer financing (m€)	3,515	(6,935)	3,509	2,912	2,949
Annual variation	n.a	-298%	+21%	-1%	+109%
IV. Employee Compensation (k€) (4)					
	73.4	72.0	75.1	73.6	71.0
Annual Variation	+2.0%	-4.1%	+2.0%	+3.6%	0.0%

(1) Base salary 2019 relates to the former CEO up to 10 April 2019 and to the current CEO from 10 April 2019.

(2) VR paid during the financial year at stake in relation to the previous financial year. In 2020, the VR paid is related to the former CEO from 1 January 2019 up to 10 April 2019 (based on target) and to the current CEO from 10 April 2019 up to the end of the year 2019. As a reminder, the current CEO decided in 2020 to donate the equivalent to his VR related to 2019 to non-governmental organisations and humanitarian organisations.

(3) Face value of LTIP granted in the financial year. No LTIP was granted in 2018 to the former CEO due to his future departure.

(4) Average compensation of full-time equivalent permanent employees from France, Germany, the UK and Spain for the Company, excluding subsidiaries, composed by gross sum of the Base Salary, annual bonus, profit and success sharing, overtime, premium for work conditions and other premiums. For the 2020 financial year, the amount presented has been adjusted based on final figures. For the 2020 financial year, the amount presented has been adjusted based on final figures excluding impact on non-active workforce related to the sanitary crisis. For the 2021 financial year, the amount presented is still an estimate and will be adjusted next year.

4.4.4 IMPLEMENTATION OF THE REMUNERATION POLICY IN 2021: NON-EXECUTIVE DIRECTORS

This section describes how the Remuneration Policy was implemented in 2021 in respect of the Non-Executive Directors. In line with the Remuneration Policy, the implementation thereof with regard to the Non-Executive Directors aims at ensuring fair compensation and protecting the independence of the Board's Members. Their remuneration should be commensurate to the time spent and the responsibilities of their role on the Board of Directors.

The last review of the Board remuneration was undertaken in 2018 with the support of an independent consultant. The Board remuneration is in line with market practice, incentivises attendance and recognises the strategic role played by the Board of Directors in the Company's developments. The CEO is the only Member of the Board of Directors who is not entitled to any Board membership fee.

In 2021, Non-Executive Members of the Board of Directors were entitled to the following fees:

a) Board fees:

▢ Fixed fee for membership of the Board of Directors (EUR / year):

- Chair of the Board: 210,000
- Member of the Board: 80,000

▢ Attendance fees (EUR / Board meeting):

- Chair: 15,000
- Member: 10,000

Attendance fees shall decrease by 50% in case of an attendance by phone or a Board meeting held by phone.

b) Committee fees:

▢ Fixed fee for membership of a Committee (EUR / year):

- Chair: 30,000
- Member of a Committee: 20,000

- Attendance fee for membership of a Committee applicable to chair and members (EUR / additional meeting above four meetings per Committee per year, whether these meetings were held physically or by phone):
- Physical participation: 3,000 if the chair or member is based in Europe and double attendance fee amount, i.e. 6,000 if the chair or member is based outside Europe.
 - Participation by phone (whether the meeting is held physically or by phone): 1,500.

The remuneration of the Non-Executive Members of the Board of Directors was as follows:

(In €)	2021			2020		
	Fixum (1)	Attendance Fees (2)	Total	Fixum (1)	Attendance Fees (2)	Total
Non-Executive Board Members						
René Obermann (3)	210,000	90,000	300,000	117,738	76,250	193,988
Victor Chu	100,000	43,000	143,000	100,000	78,000	178,000
Jean-Pierre Clamadieu (4)	130,000	67,500	197,500	127,087	90,000	217,087
Ralph D. Crosby Jr.	100,000	61,000	161,000	100,000	83,000	183,000
Lord Drayson	120,000	49,500	169,500	120,000	80,000	200,000
Mark Dunkerley (5)	100,000	66,000	166,000	70,879	48,000	118,879
Stephan Gemkow (5)	100,000	63,000	163,000	70,879	58,000	128,879
Catherine Guilloard	130,000	67,500	197,500	130,000	93,000	223,000
María Amparo Moraleda Martínez	130,000	54,500	184,500	130,000	85,000	215,000
Claudia Nemat	100,000	56,500	156,500	100,000	80,000	180,000
Carlos Tavares	80,000	45,000	125,000	80,000	70,000	150,000
Former Non-Executive Board Members						
Denis Ranque (6)		N/A		61,731	35,000	96,731
Hermann-Josef Lamberti (7)		N/A		35,274	35,000	70,274
Total	1,300,000	663,500	1,963,500	1,243,588	911,250	2,154,838

(1) Fixum includes a base fee for Board membership and Committee membership within the Audit Committee, the Remuneration, Nomination and Governance Committee ("RNGC") and/or the Ethics, Compliance and Sustainability Committee ("ECSC") as the case may be. The fixum for the year 2021 was paid 50% in January 2021 and 50% in July 2021. The fixum for the year 2020 was paid 50% in January 2020 and 50% in July 2020.

(2) 2021 attendance fees include the Board attendance fees and the fees in relation to Audit Committee, RNGC and ECSC meetings. The Board attendance fees related to the first semester 2021 were paid in July 2021, those related to the second semester 2021 were paid in January 2022. The Committees' attendance fees related to full year 2021 were paid in January 2022.

(3) Chairman of the Board of Directors since 16 April 2020. Member of the Audit Committee until 16 April 2020. Member of the former Ethics & Compliance Committee between 30 July 2019 and 16 April 2020. As a reminder, René Obermann waived half of his 2020 remuneration (including fixum and attendance fees as Chairman of the Board).

(4) Member of the former Ethics & Compliance Committee until 16 April 2020. Chair of the ECSC since then.

(5) Member of the Board of Directors and of the Audit Committee since 16 April 2020.

(6) Chairman of the Board of Directors and of the former Ethics & Compliance Committee until 16 April 2020.

(7) Member of the Board of Directors and of the Audit Committee until 16 April 2020.

The total aggregated remuneration (i.e. fixum and attendance fee) of the Non-Executive Members of the Board of Directors was respectively € 2,350,176 in 2019, € 2,010,910 in 2018 and € 2,080,403 in 2017.

The applicable fixum for Board chair(wo)manship as well as the applicable attendance fees for Board membership and chair(wo)manship remain unchanged since 1 January 2016 (first comprehensive revision since 2007) following the decision made at the 2016 AGM to increase the remuneration of the Chair (fixum by € 30,000 and attendance fees by € 5,000) and double (to € 10,000) the attendance fees of the non-executive Board members in order to be in line with market practice, incentivise attendance and recognise the strategic role played by the Board of Directors in the Company developments. The applicable fixum for Board membership as well as Committee membership and chair(wo)manship remain unchanged since 2007.

The applicable attendance fees for Committee membership remain unchanged since 1 January 2019 following the decision made at the 2019 AGM to allocate an attendance fee above four meetings per Committee per year in order to take into account Directors' attendance at a greater number of Committee meetings when the workload substantially intensifies due to exceptional circumstances.

4.4.5 MISCELLANEOUS

Policy for loans and guarantees granted

The Company's general policy is not to grant any loan to the members of the Board of Directors. Unless the law provides otherwise, the members of the Board of Directors shall be reimbursed by the Company for various costs and expenses, like reasonable costs of defending claims. Under certain circumstances, such as an act or failure to act by a member of the Board

of Directors that can be characterised as intentional, intentionally reckless, or seriously culpable, there will be no entitlement to this reimbursement. The Company has also taken out liability insurance ("D&O - Directors & Officers") for the persons concerned.

4.5 Enterprise Risk Management System

The long-term development and production cycles of the Company's products and services make ERM a crucial mechanism to both mitigate risks faced by the Company and to identify and enhance potential opportunities.

Applied across the Company and its main subsidiaries, ERM is a permanent top-down and bottom-up process, which is executed across Divisions at each level of the organisation. It is designed to identify and manage risks and opportunities. A strong focus is put on the operational dimension due to the importance of programmes and operations for the Company. External factors are also well considered in our approach.

ERM is an operational process embedded into the day-to-day management activities of programmes, operations and functions. The top risks and their mitigations are reported to the Board of Directors through a reporting synthesis, consolidated on a quarterly basis.

The ERM system relies on five pillars:

- ▶ Anticipation: early risk reduction and attention to emerging risks;
- ▶ Speak-up & early warnings;
- ▶ Robust risk mitigations;
- ▶ Opportunities; and
- ▶ Strong Governance.

ERM process

The objectives and principles for the ERM system, as endorsed by the Board of Directors, are set forth in the Company's ERM Policy and communicated throughout the Company. The Company's ERM Policy is supplemented by directives, manuals, guidelines, handbooks, and other supporting documents. External standards which contribute to the Company's ERM system include the ISO 31000 defined by the International Organization for Standardization ("ISO").

The ERM process consists of three elements:

- ▶ a strong operational dimension - derived from ISO 31000 - to enhance operational risk and opportunity management, looking in particular at identifying and mitigating single points of failure (SPOF);
- ▶ a reporting dimension (bottom up and top down), which contains procedures for the status reporting of the ERM system and the risk/opportunity situation; and
- ▶ an ERM confirmation dimension, which comprises procedures to assess the effectiveness of the ERM system.

The ERM process applies to all relevant sources of risks and opportunities that potentially affect the Company's activities, its businesses and its organisation in the short-, mid- and long-term. The ERM process is part of the management process and inter-related with the other processes.

All Airbus organisations, including Divisions, subsidiaries and controlled participations, commit to and confirm the effective implementation of the ERM system. The annual ERM Confirmation Letter issued by each organisation is the formal acknowledgement about the effectiveness of the ERM system.

For the main risks to which Airbus is exposed, see "— Chapter 4.6 (Risk Factors)" of this document.

ERM governance and responsibility

The governance structure and related responsibilities for the ERM system are as follows:

- ▶ the Board of Directors with support of the Audit Committee supervises the strategy and business risks and opportunities, as well as design and effectiveness of the ERM system;
- ▶ the CEO authorises the reports escalated to the Board of Directors. The CFO is accountable for an effective ERM system and supervises the Head of ERM, and the ERM system design and process implementation;

Airbus SE / 2021 Board Report 42

- ▶ the Head of ERM has primary responsibility for the ERM strategy, priorities, system design, culture development and reporting tool. He supervises the operation of the ERM system and is backed by a dedicated risk management organisation in the Company, focusing on the operational dimension, early warning and anticipation culture development, while actively seeking to reduce overall risk criticality by challenging the business. The risk management organisation is structured as a cross-divisional Centre of Competence ("CoC") and pushes for a proactive risk management; and
- ▶ the management at executive levels has responsibility for the operation and monitoring of the ERM system in its respective areas of responsibility, and for the implementation of appropriate response activities to reduce risks and seize opportunities, considering the recommendations of the internal and external auditors.

ERM effectiveness

The ERM effectiveness is analysed by:

- ▶ ERM CoC, based on ERM reports, confirmation letters, in situ sessions (e.g. risk reviews), participation to key controls (e.g. major programme maturity gate reviews);
- ▶ ERM key performance indicators measuring maturity and effectiveness of the ERM process in the programmes and functions;
- ▶ Risk & opportunity deep dives proposed by the ERM CoC and performed by the functions with the involvement and support of the ERM CoC; and
- ▶ Corporate Audit, based on internal Corporate Audit reports and on an annual survey towards heads of programmes and functions and towards the ERM network.

The combination of the following controls is designed to achieve reasonable assurance about ERM effectiveness:

Organisation	Explanations
	Regular monitoring

Board of Directors / The Board of Directors and the Audit Committee are responsible for the oversight and supervision of the improvements of the ERM system which are observed, made and/or planned or discussed with the Board of Directors and the Audit Committee.

ERM as part of the regular divisional business reviews

Top management Results of the operational risk and opportunity management process, self-assessments and confirmation procedures are presented by the Divisions or other Airbus' organisations to top management.

[ERM working sessions at Executive Leadership Meeting twice a year](#)

ERM confirmation letter procedure

Management Entities and department heads that participate in the annual ERM compliance procedures must sign ERM Confirmation Letters.

ERM effectiveness measurement

ERM CoC Assess ERM effectiveness by consideration of ERM [performance KPI](#), [ERM](#) reports, ERM confirmations, in situ sessions (risk reviews etc.), participation to key controls (e.g. major programme maturity gate reviews).

Audits on ERM

Corporate Audit Provide independent assurance to the Audit Committee on the effectiveness of the ERM system; annual survey.

Airbus SE / 2021 Board Report 43

Alert system

E&C Detects deficiencies regarding conformity to applicable laws and regulations as well as to ethical business principles.

Board declaration

Based on the Company's current state of affairs, the reports made directly available to the Board of Directors, coming from different processes, audits and controls and the information it received from management, the Board of Directors believes to the best of its knowledge that:

- the internal risk management and control systems provide reasonable assurance that the financial reporting does not contain any material inaccuracies;
- this report provides sufficient insight into any material failings in the effectiveness of the internal risk management and control systems;
- it is justified that the financial statements have been prepared on a going concern basis; and
- this report states the material risks and uncertainties that are relevant to the expectation of the Company's continuity for the period of 12 months after the preparation of the report.

It should be noted that no matter how well designed, the internal risk management and control system has inherent limitations, such as vulnerability to circumvention or overrides of the controls in place. Consequently, no assurance can be given that the Company's internal risk management and system and procedures are or will be, despite all care and effort, entirely effective.

4.6 Risk Factors

The Company is subject to the risks and uncertainties described below that may materially affect its business, results of operations and financial condition. These are not the only risks the Company faces. Additional risks and uncertainties not presently known to the Company, or that it currently considers immaterial may also impair its business and operations.

Although a certain degree of risk is inherent in the Company's business (as described in the risk factors mentioned in this section), the Company endeavours to minimise risk to the extent reasonably possible. To achieve its strategy, the Company is prepared to take modest or low event risks to provide sufficient predictability on profitability and cash flow given the necessity to stay competitive, invest in R&D and manage the diversified business portfolio in a world of uncertain market and economic conditions. Due to the importance of programmes and operations for the Company, a particular focus is put on the operational dimension of risk identification and management. Within the area of legal and compliance risks, the Company seeks to ensure that its business practices conform to applicable laws, regulations and ethical business principles, while developing a culture of integrity. Regarding financial risks, our risk approach can be qualified as prudent and the Company aims to minimise the downside risk through an appropriate liquidity buffer, moderate financial leverage and the use of hedging derivatives and other insurance products.

4.6.1 FINANCIAL MARKET RISKS

Global economic conditions

The Company's business, results of operations and financial condition are materially affected by global economic conditions.

Market disruptions and significant economic downturns may develop quickly due to, among other things, crises affecting credit or liquidity markets, regional or global recessions, sharp fluctuations in commodity prices (including oil), currency exchange rates or interest rates, inflation or deflation, sovereign debt and bank debt rating downgrades, restructurings or defaults, or adverse geopolitical events (including rising military tensions around the world and in particular within Europe's borders, the impact of Brexit and global policy including in the United States ("US"), European Union, Russia and China) or global pandemic diseases such as COVID-19. The previous US administration introduced greater uncertainty with respect to US tax and trade policies, tariffs and government regulations affecting trade between the US and other countries. Such measures affected and may continue to affect countries where our customers and suppliers are located or where the

Airbus SE / 2021 Board Report 44

Company has an operational presence or to which its financing activities are linked. See "– Business-Related Risks – COVID-19 Risks" and "– Business-Related Risks – Availability of Government and other Sources of Financing".

The Company's global presence includes France, Germany, Spain and the UK, fully-owned subsidiaries in the US, China, Japan, India and in the Middle East, and spare parts centres in Hamburg, Frankfurt, Washington, Beijing, Dubai and Singapore. The Company also has engineering and training centres in Toulouse, Miami, Mexico, Wichita, Hamburg, Bangalore, Beijing and Singapore, as well as an engineering centre in Russia. There are also hubs and field service stations around the world. The Company also relies on industrial co-operation and partnerships with major companies and a wide network of suppliers. This global presence entails the risk of being affected by weak market and economic conditions in particular in Europe, the US and Asia where it manufactures and to which it sells the majority of its products.

As of 31 December 2021, the Company's workforce amounted to 126,495 employees of which over 15,000 were employed outside our core countries. In terms of nationalities, 35.4% of the Company's employees are from France, 31.5% from Germany, 7.7% from the UK and 10.3% from Spain. The remaining 15.1% are employees from a total of 134 other countries. In total, 89.1% of the Company's active workforce is located in Europe on more than 100 sites.

It is a priority to ensure that the Company can attract, develop and retain a world-class competent, motivated and flexible workforce, which fits current and future business requirements in each of the countries in which we have a presence. A change in economic conditions in any of the geographies in which we have significant numbers of employees or key employees may therefore impact our ability to compete effectively for employees in such countries.

At the end of 2020, approximately 23,000 suppliers from more than 100 countries supply parts, components, systems and services to the Company. In 2019, the overall external sourcing volume of the Company was valued at around € 53 billion. The Company requires its suppliers' and subcontractors' services in order to deliver our products and generate revenue and profit. Therefore financial instability in any part of the world that would affect our suppliers or subcontractors, including financial conditions resulting in their inability to obtain credit or even in their insolvency, could impact the Company's ability to meet its customer obligations in a satisfactory and timely manner. In addition, financial instability affecting suppliers or subcontractors could impact such parties' ability to meet their obligations under risk sharing partnership agreements entered into with the Company. The COVID-19 pandemic and the resulting health and economic crisis has increased the Company's exposure to supply chain risk.

The behaviour of our customers and by extension, the demand for and supply of the Company's products and services has been and may continue to be materially affected by global economic conditions. Historically, the Company has experienced that order intake for commercial aircraft has shown cyclical trends, due in part to changes in passenger demand for air travel and the air cargo share of freight activity, which are in turn driven by a range of economic variables including gross domestic product ("GDP") growth and private consumption levels. A further downturn in economic factors driven by new variants and successive waves of the COVID-19 pandemic, and the resulting health and economic crisis and the related drop in air travel in a large part of the world driving our commercial airline business, could lead to protracted weak demand for our commercial aircraft. The significant growth of our commercial aircraft business relative to the Company's defence, space and government activities has diluted the latter's ability to serve as an effective tool to counter commercial cycles.

Demand for military and parapublic products may be further affected by governmental budget constraints caused by economic pressure and COVID-19 measures.

Therefore protracted weak global economic conditions could directly result in:

- financial distress of airlines and lessors, and potential bankruptcies around the world;
- requests by customers to postpone or cancel existing orders for aircraft (including helicopters) or decisions by customers to review their order intake strategy due to, among other things, lack of adequate credit supply from the market to finance aircraft purchases or increases in operating costs or weak levels of passenger demand for air travel and cargo activity more generally, which could negatively impact the Company's results of operations;
- variations in public spending for defence, homeland security and space activities, which may lead to termination or reduction of future funding or cancellations or delays impacting existing contracts, which could negatively impact the Company's results of operations; and
- an increase in the amount of sales financing that the Company is requested to provide to its customers to support aircraft deliveries typically secured over the underlying aircraft and bearing exposure to the customer credit risk. See "– Risk Factors – Financial Market Risks – Sales Financing Arrangements".

In addition, in the commercial aircraft industry it is the industry standard to include revision clauses in sales and supplier contracts, due to the long terms of such contracts. Such revision clauses can be based on one or multiple indices and therefore, can evolve due to changes in economic measures on which such indices are based, thereby potentially negatively impacting the Company's results.

Airbus SE / 2021 Board Report 45

The Company generally finances its manufacturing activities and product development programmes, and in particular the development of new commercial aircraft, through a combination of cash flows generated by operating activities, customer advances, European governments' refundable advances and risk-sharing partnerships with subcontractors. In addition, the Company's military activities benefit from government-financed research and development contracts. If necessary, the Company may raise funds in the capital markets. Weak economic circumstances leading to liquidity constraints or reduced availability of finance for the Company's customers, suppliers, European and other governments, and other risk sharing partners may affect the Company's ability to finance its product development programmes and raise funds in the capital markets.

The Company's financial results could also be negatively affected depending on gains or losses realised on the sale or exchange of financial instruments; impairment charges resulting from revaluations of debt and equity securities and other investments; interest rates; cash balances; and changes in fair value of derivative instruments. Increased volatility in the financial markets and overall economic uncertainty would increase the risk of the actual amounts realised in the future on the Company's financial instruments differing significantly from the fair values currently assigned to them. Although the potential negative impact of global economic conditions has been thoroughly assessed, the consequences thereof could have unforeseen material effects on the Company's business, results of operations and financial condition, and in particular if these were to impact the Company's commercial aviation activities or otherwise impact its access to financing.

Brexit

On 29 March 2017, the UK triggered Article 50 of the Lisbon Treaty, the mechanism to leave the European Union ("Brexit"). The UK left the EU in an orderly manner on 31 January 2020 under the terms of the Withdrawal Agreement.

Brexit could lead to a reduced degree of political alignment between the Airbus home nations of UK, France, Germany and Spain, and more widely with EU institutions, now that the UK is no longer a member of the EU.

This risk of fragmentation could also impact the availability of public financing sources for our sector. This could for instance materialise in relation to COVID-19 crisis recovery plans, investment necessary to support our industry's climate transition, financing of defence and security activities, or of research and development.

The Trade and Cooperation Agreement ("TCA") concluded between the EU and the UK provides an adequate basis to support the Company's and its supply chain industrial operations. Nevertheless, the existence of divergences between the EU and UK's positions on certain significant issues, for instance in relation to Northern Irish border controls, migration flows or regulatory alignment, could trigger tensions which, in turn, could impact the implementation of the TCA and the associated benefits for our sector.

Foreign currency exposure

In 2021, more than 70% of the Company's revenues are denominated in US dollars, with approximately 60% of such currency exposure "naturally hedged" by US dollar-denominated costs. The remainder of costs are incurred primarily in euros. Consequently, to the extent that the Company does not use financial instruments to hedge its net current and future exchange rate exposure from the time of a customer order to the time of delivery, its profits will be affected by market changes in the exchange rate of the US dollar against these currencies.

There are complexities inherent in determining whether and when foreign currency exposure of the Company will materialise, in particular given the possibility of unpredictable revenue variations arising from order cancellations, postponements or delivery delays. The Company may also have difficulty in fully implementing its hedging strategy if its hedging counterparties are unwilling to increase derivatives risk limits with the Company, and is exposed to the risk of non-performance or default by these hedging counterparties. The exchange rates at which the Company is able to hedge its foreign currency exposure may also deteriorate, as the euro could appreciate against the US dollar for some time, as has been the case in the past and as higher capital requirements for banks result in higher credit charges for uncollateralised derivatives. Accordingly, the Company's foreign currency hedging strategy may not protect it from significant changes in the exchange rate of the US dollar to the euro and the pound sterling, in particular over the long term, which could have a negative effect on its financial condition and results of operations. In addition, the portion of the Company's US dollar-denominated revenues that is not hedged in accordance with the Company's hedging strategy will be exposed to fluctuations in exchange rates, which may be significant. As of 31 December 2021, the total hedge portfolio with maturities up to 2027 amounts to US\$ 88.3 billion and covers a major portion of the foreign exchange exposure expected over the period of the operative planning.

Airbus SE / 2021 Board Report 46

Furthermore, the Company is exposed to certain other price risks such as interest rate risks, changes in commodity prices and in the price of its own stocks. Adverse movements of these prices may jeopardise the Company's profitability if not hedged.

Currency exchange rate fluctuations in currencies other than the US dollar in which the Company incurs its principal manufacturing expenses (mainly the euro) may affect the ability of the Company to compete with competitors whose costs are incurred in other currencies. This is particularly true with respect to fluctuations relative to the US dollar, as many of the Company's products and those of its competitors (e.g., in the defence export market) are priced in US dollars. The Company's ability to compete with competitors may be eroded to the extent that any of the Company's principal currencies appreciates in value against the principal currencies of such competitors.

The Company's consolidated revenues, costs, assets and liabilities denominated in currencies other than the euro are translated into the euro for the purposes of compiling its financial statements. Changes in the value of these currencies relative to the euro will, therefore, have an effect on the euro value of the Company's reported revenues, costs, EBIT, other financial results, assets, liabilities and equity.

Sales financing arrangements

In support of sales, the Company may agree, case by case, to participate in the financing of selected customers. Over the last three years (2019 to 2021) on average, the number of aircraft delivered in respect of which financing support has been provided by Airbus amounted to approximately 1% of the number of deliveries over the same period.

The risks arising from the Company's sales financing activities may be classified into two categories: (i) credit risk, which relates to the customer's ability to perform its obligations under a financing arrangement, and (ii) aircraft value risk, which primarily relates to unexpected decreases in the future value of aircraft. Defaults by its customers or significant decreases in the value of the financed aircraft in the resale market may materially adversely affect the Company's business, results of operations and financial condition.

The Company's sales financing arrangements expose it to residual aircraft value risk, because it generally retains security interests in aircraft for the purpose of securing customers' performance of their financial obligations to the Company, and/or because it may guarantee a portion of the value of certain aircraft at certain anniversaries from the date of their delivery to customers. Under adverse market conditions, the market for used aircraft could become illiquid and the market value of used aircraft could significantly decrease below projected amounts. In the event of a financing customer default at a time when the market value for a used aircraft has unexpectedly decreased, the Company would be exposed to the difference between the outstanding loan amount and the market value of the aircraft, net of ancillary costs (such as maintenance and remarketing costs, etc.). Similarly, if an unexpected decrease in the market value of a given aircraft coincided with the exercise window date of an asset value guarantee with respect to that aircraft, the Company would be exposed to losing as much as the difference between the market value of such aircraft and the guaranteed amount, though such amounts are usually capped. Through the Airbus Asset Management department or as a result of past financing transactions, the Company is the owner of used aircraft, exposing it directly to fluctuations in the market value of these used aircraft.

In addition, the Company has backstop commitments to provide financing related to orders on the Company's and ATR's backlog. The Company's sales financing exposure could rise in line with future sales growth, depending on the agreement reached with customers. The Company remains exposed to the risk of defaults by its customers or significant decreases in the value of the financed aircraft in the resale market, which may have a negative effect on its future financial condition and results of operations.

Liquidity

The Company is exposed to liquidity risk in case of funding needs during a market disruption situation. The liquidity risk can arise when money markets and debt capital markets are closed for new issuances for a period of time. In order to mitigate this risk, the Company maintains:

- significant amounts of highly liquid cash on-balance sheet;
- undrawn committed credit facilities;
- diversified Euro funding programmes (such as a € 12 billion euro medium-term note ("EMTN") programme eligible to the Corporate Sector Purchase Programme of the European Central Bank ("ECB"), a € 11 billion Negotiable European Commercial Paper programme eligible to the Pandemic Emergency Purchase Programme of the ECB, and a € 4 billion Euro Commercial Paper programme; and
- access to USD funding (through a US\$ 3 billion US Commercial Paper programme, and a 144A US dollar bond market).

On 26 February 2021, the Company exercised the first extension option of the maturity of its undrawn New Credit Facility (implemented in 2020 for € 15 billion in response to the COVID-19 pandemic and reduced to € 6.2 billion after take-outs) from 30 March 2021 to 30 September 2021.

Airbus SE / 2021 Board Report 47

In August 2021, given the increase of its net cash position and its robust liquidity, the Company decided not to exercise the second extension option of the € 6.2 billion New Credit Facility that matured on 30 September 2021. In the meantime, the Company extended the maturity of our € 6 billion Revolving Syndicated Credit Facility by one year to 21 October 2024. Going forward, the Company will continue to adopt a prudent approach when it comes to managing its liquidity with the objective of maintaining its robust credit rating.

Counterparty credit

In addition to the credit risk relating to sales financing as discussed above, the Company is exposed to credit risk to the extent of non-performance by its counterparties for financial instruments, such as hedging instruments (US\$ 88.3 billion nominal value at 31 December 2021) and cash investments (US\$ 20.65 billion nominal value at 31 December 2021). However, the Company has policies in place to avoid concentrations of credit risk and to ensure that credit risk exposure is limited.

Counterparties for transactions in cash, cash equivalents and securities as well as for derivative transactions are limited to highly rated financial institutions, corporates or sovereigns. The Company's credit limit system assigns maximum exposure lines to such counterparties, based on a minimum credit rating threshold as published by Standard & Poor's and Moody's. If neither is present, Fitch ratings are used. Besides the credit rating, the limit system also takes into account fundamental counterparty data, as well as sector and maturity allocations and further qualitative and quantitative criteria such as credit risk indicators. The credit exposure of the Company is reviewed on a regular basis and the respective limits are regularly monitored and updated.

As of 31 December 2021 the credit exposure had been estimated as follows (in € million):

Source of risk	Exposure	Unexpected Loss Contribution
Banks	3,074	43
Corporates	3,917	90
Sovereign issuers	1,326	12
Money market funds	12,328	21
Total	20,645	166

The Company also seeks to maintain a certain level of diversification in its portfolio between individual counterparties as well as between financial institutions, corporates and sovereigns in order to avoid an increased concentration of credit risk on only a few counterparties.

However, there can be no assurance that the Company will not lose the benefit of certain derivatives or cash investments in case of a systemic market disruption. In such circumstances, the value and liquidity of these financial instruments could decline and result in a significant impairment, which may in turn have a negative effect on the Company's financial condition and results of operations.

Moreover, the progressive implementation of new financial regulations and adjustments to existing regulations will have an

impact on the business model of banks, for example, the split between investment banking and commercial banking activities, and on the capital structure and cost of such banks' activities in relation to banking derivatives, and therefore on the funding consequences of central clearing and collateralisation of over-the-counter derivatives for corporations like the Company. This may ultimately increase the cost and reduce the liquidity of the Company's long-term hedges, for example, as banks seek to either pass-on the additional costs to their corporate counterparties or withdraw from low-profit businesses altogether.

Pension commitments

The Company participates in several pension plans for both executive as well as non-executive employees, some of which are underfunded. As of 31 December 2021, the provision for retirement plans and similar obligations amounted to € 7.1 billion. For information related to these plans, please refer to the "– Notes to the IFRS Consolidated Financial Statements – Note 32: Post-employment Benefits". Although the Company has recorded a provision in its balance sheet for its share of the underfunding based on current estimates, there can be no assurance that these estimates will not be revised upward in the future, leading the Company to record additional provisions in respect of such plans.

Necessary adjustments of such provisions include but are not limited to (i) the discount factor (dependent in part on interest rates) and the inflation rate applied to calculate the net present value of the pension liabilities, (ii) the performance of the asset classes which are represented in the pension assets, and (iii) behavioural assumptions regarding beneficiaries, and (iv) additional cash injections contributed by the Company from time to time to the pension assets. The Company has taken

Airbus SE / 2021 Board Report 48

measures to reduce potential losses on the pension assets and to better match the characteristics of the pension liabilities with those of the pension assets as a long-term objective. Nevertheless, any required additional provisions would have a negative effect on the Company's total equity (net of deferred tax), which could in turn have a negative effect on its future financial condition.

4.6.2 BUSINESS-RELATED RISKS

COVID-19 risks

Over the last two years, new variants and the successive waves of the COVID-19 pandemic, the resulting health and economic crisis and actions taken in response to the spread of the pandemic, including government measures, lockdowns, travel limitations and restrictions, have resulted in significant disruption to the Company's business, operations and supply chain.

The aerospace industry, the financial health of operators, airlines, lessors and suppliers, commercial aircraft market, demand for air travel and commercial air traffic have been severely impacted by the COVID-19 pandemic and the resulting health and economic crisis. As a result, airlines have reduced capacity, grounded portions of their fleets, sought to implement measures to reduce cash spending and secure liquidity. Some airlines are also seeking arrangements with creditors, restructuring or applying for bankruptcy or insolvency protection, which may have further consequences for the Company and its order book as well as other consequences resulting from the related proceedings. The Company will continue to face additional risks and uncertainties resulting from future consequences of the health and economic crisis on operators, airlines, lessors, suppliers and other actors in the air transport industry. See also "– Commercial Aircraft and Helicopter Market Factors" below.

Over the last two years, a number of measures have been taken by the Company to implement stringent health and safety procedures while taking account of stock levels and production lead-times. The COVID-19 crisis may lead to further disruptions to the Company's internal operations and to its ability to deliver products and services. See also "– Dependence on Key Suppliers and Subcontractors" below.

In addition to its impact on the financial viability of operators, airlines and lessors and the reduction of commercial air traffic, lockdowns, travel limitations and restrictions around the world have posed logistical challenges and may continue to cause disruptions to the Company's business, its operations and supply chain. These measures have and may continue to adversely affect the Company's ability to deliver products and services as well as customers' ability to take delivery of aircraft.

The Company has been adversely affected by weak market and economic conditions in markets around the world. Protracted weaker market and economic conditions and their knock-on effects have and could continue to result in (i) additional requests by customers to postpone delivery or cancel existing orders for aircraft (including helicopters) or other products including services, (ii) decisions by customers to review their fleet strategy, (iii) weak levels of passenger demand for air travel and cargo activity more generally, (iv) a sustained reduction in the volume of air travel for business purposes, and (v) prolonged or additional travel limitations and restrictions, which could negatively impact the Company's results of operations.

In 2021, the Company delivered 611 commercial aircraft, 8% more than in 2020 (compared to 566 commercial aircraft in 2020, which was 34% fewer than in 2019, in line with the Company's adaptation plan). This reflects customer requests to defer deliveries as well as other factors related to the ongoing COVID-19 crisis. In 2021, the Company recorded 264 cancellations (compared to 115 cancellations in 2020).

On 21 January 2021, the Company announced its decision to update its production rates in response to the market environment.

On 27 May 2021, the Company provided suppliers with an update of its production plans based on its expectation that the commercial aircraft market may recover to pre-COVID levels between 2023 and 2025, led by the single-aisle segment. In anticipation of a continued recovering market, the Company confirmed an average A320 Family production rate of 45 aircraft per month in the fourth quarter of 2021 and called on suppliers to prepare for the future by securing a firm rate of 64 by the second quarter of 2023. The A220 monthly production rate is confirmed to rise to around six in early 2022. The A350 production rate is expected to increase to six by Autumn 2022 while A330 production is expected to remain at an average monthly production rate of two per month.

On 28 October 2021, the Company announced the A220 production rate, which was at five aircraft a month, is expected to increase to around rate six per month in early 2022, with a monthly production rate of 14 envisaged by the middle of the decade. On the A320 Family programme, the Company is working to secure the ramp up and is on trajectory to achieve a

Airbus SE / 2021 Board Report 49

monthly rate of 65 aircraft by summer 2023. The recent commercial successes of the A330 programme enable a monthly rate increase from around two to almost three aircraft at the end of 2022. The A350 programme is expected to increase from around five to around six aircraft a month in early 2023.

The Company continues to monitor the market closely. With these revised rates, the Company preserves its ability to meet customer demand while protecting its ability to further adapt as the global market evolves. The Company expects the commercial aircraft market to return to pre-COVID levels by 2023 to 2025.

The Company is monitoring the evolution of the COVID-19 crisis and will continue to evaluate further impacts and additional measures going forward while taking into account the latest industry outlook.

Although the full impact of the COVID-19 pandemic and the resulting health and economic crisis cannot reasonably be assessed at this time given its uncertain duration and extent, the Company's business, its operations and supply chain are likely to be further disrupted by new variants and successive waves of the pandemic, the uncertainty it creates and the resulting health and economic crisis.

The Company's business, results of operations and financial condition have been and will continue to be materially affected by the COVID-19 pandemic, and the Company continues to face significant risks and uncertainties related to new variants and successive waves of the COVID-19 pandemic and its resulting health and economic crisis. For further details, please refer to the "– Notes to the IFRS Consolidated Financial Statements – Note 2: Impact of the COVID-19 Pandemic".

Commercial aircraft and helicopter market factors

Historically, the Company has experienced that order intake for commercial aircraft has shown cyclical trends, due in part to changes in passenger demand for air travel and the air cargo share of freight activity, which are in turn driven by a range of economic variables, such as GDP growth, private consumption levels or working age population size. Other factors, however, play an important role in determining the market for commercial aircraft, such as (i) the average age and technical obsolescence of the fleet relative to new aircraft; (ii) the number and characteristics of aircraft taken out of service and parked pending potential return into service; (iii) passenger and freight load factors; (iv) airline pricing policies and resultant yields; (v) airline financial health; (vi) the availability of third party financing for aircraft purchases; (vii) evolution of fuel price; (viii) regulatory environment; (ix) environmental constraints imposed upon aircraft operations, such as the Carbon Offsetting and Reduction Scheme for International Aviation ("CORSA"), carbon standards and other environmental taxes; and (x) market evolutionary factors such as the volume of business-related travel or the growth of low-cost passenger airline business models or the impact of e-commerce on air cargo volumes or consolidation of airlines. The COVID-19 pandemic and resulting health and economic crisis can amplify the impact of these factors, with the volatility observed during 2020 and 2021.

The factors described above may have a material impact on the commercial aircraft industry and therefore, on the Company's financial condition and results of operations. In 2021, the commercial aircraft business segment of Airbus recorded total revenues of € 36.1 billion – representing 69% of the Company's revenues. See "– Information on the Company's Activities – 1.1.2 Airbus (Commercial Aircraft)". During the COVID-19 pandemic, the Company observed that the downturn in its commercial aircraft business was partially mitigated by its defence, space and government activities. Such a cyclical pattern had already been observed in the past but historically diminished, due to the significant growth of the Company's commercial aircraft business relative to its other activities, until the global pandemic arrived.

The commercial helicopter market in which the Company operates has shown cyclical trends and could also be influenced by factors listed above. The civil and parapublic market has shown signs of recovery in 2021, notably in the intermediate single engine helicopter segment led by the private and business aviation market. However, the offshore oil and gas market remains soft with low level of investments in the acquisition of new platforms. Flight hours have decreased slightly due to the pandemic however Airbus Helicopters has increased revenues thanks to the wide-ranging portfolio of service solutions.

Cyber security risks

The Company's extensive information and communications systems, industrial environment, products and services are exposed to cyber security risks. Cyber security threats are rapidly changing and scenarios of attacks are becoming more sophisticated.

The Company is exposed to a number of different cyber security risks, directly or through its supply chain, arising from actions that may be intentional and hostile, accidental or negligent. Some of the objectives of an attacker are espionage, influence, obstacle to functioning or lucrative. The main cyber security risks for the Company are intrusion in systems leading to data leakage, attacks impacting the resilience of industrial systems and compromising products and services.

All of the above mentioned risks are heightened in the context of the increasingly common use of digital solutions by the Company (including greater use of cloud services, mobile devices, "internet of things"), increasingly capable adversaries and integration with the extended enterprise. Risks related to the Company's industrial control systems, manufacturing processes and products are growing with the increase of interconnectivity and digitalisation. Moreover, a main challenge is to maintain an appropriate level of security of complex and legacy industrial systems to face attacks from hackers, who are improving their techniques and skills at incredible speed.

Finally, the Company is exposed to reputational damage and destabilisation from the growing volume of false and malicious information injected into media and social networks.

The Company continues to make significant efforts to prevent such risks from materialising. Targeted investments will reduce but not eradicate likelihood and impact through strengthening the business cyber resilience.

The materialisation of one or several of such risks could lead to severe damage including but not limited to significant financial loss, need for additional investment, contractual or reputational performance degradation, loss of intellectual property, loss of business data and information, operational business degradation or disruptions, and product or services malfunctions. Loss of personal data may result in administrative, civil or criminal liabilities including significant fines and penalties.

Physical security, terrorism, pandemics and other catastrophic events

Past terrorist attacks, public health crises and the spread of disease (such as the global COVID-19 pandemic or the H1N1 flu pandemic or the Ebola epidemic in 2013-2016) have demonstrated that such events may negatively affect public perception of air travel safety, which may in turn reduce demand for air travel and commercial aircraft. The outbreak of wars, riots or political unrest or uncertainties may also affect the willingness of the public to travel by air. Furthermore, major aircraft accidents may have a negative effect on the public's or regulators' perception of the safety of a given class of aircraft, a given airline, form of design or air traffic management. Flight activity restart requires particular focus on safety aspects such as aircraft destorage and pilot training. As a result of such factors, the aeronautic industry may be confronted with additional sudden or prolonged reduced demand for air transport and be compelled to take additional costly security and safety measures. The Company may, therefore, suffer from a decline in demand for all or certain types of its aircraft or other products, and the Company's customers may postpone delivery or cancel orders.

In addition to affecting demand for its products, catastrophic events could disrupt the Company's internal operations or its ability to deliver products and services. Disruptions may be related to threats to infrastructure, personnel security and physical security and may arise from terrorism, conflict and civil unrest, malicious acts, natural disasters, fire, damaging weather, and other types of incidents such as drone air traffic disruption. Effects of such events may be amplified if they happen on single points of failure (SPOFs) for which dedicated identification and mitigations are monitored. Any resulting impact on the Company's production, services or information systems could have a significant adverse effect on the Company's operations, financial condition and results of operations as well as on its reputation and on its products and services.

Dependence on key suppliers and subcontractors

The Company is dependent on numerous key suppliers and subcontractors to provide it with the raw materials, parts, assemblies, systems, equipment and services that it needs to manufacture its products.

The Company relies upon the good performance and financial health of its suppliers and subcontractors to meet the obligations defined under their contracts. A supplier's performance and health may be negatively impacted by a variety of topics including: the current COVID-19 pandemic and its resulting economic impact; loss of skilled resources as a result of workforce reduction and difficulties to re-staff due to market employment tensions; need for working capital increase while state/bank loans obtained to weather through the crisis have reached maturity; difficulty gaining access to the needed material and components, including semiconductors, in the needed quantity and time frame and at competitive conditions as well as transport and logistic means availability; cyber security threats; geopolitical unrest; export controls evolving regulations and embargoes; and environmental issues.

In the context described above, changes to the Company's production or development schedules may impact suppliers so that they initiate claims under their respective contracts for financial compensation or do not fulfil their on time and on quality delivery commitments. This may have a negative effect on the financial condition and results of operations of the Company.

As the Company's global sourcing footprint extends, some suppliers (or their sub-tier suppliers) may have production facilities located in countries that are exposed to socio-political unrest or natural disasters which could interrupt deliveries. This may have a negative effect on the financial condition and results of operations of the Company.

Airbus SE / 2021 Board Report 51

The Company cannot fully protect itself from non-performance of a supplier, which could disrupt production and in turn may have a negative effect on the financial condition and results of operations of the Company. The Company has implemented a robust governance to prevent, anticipate and monitor supply chain disruption risks and/or ensure efficient management of issues.

Industrial system ramp-up

In early 2020, in response to the COVID-19 crisis, the Company adapted the production rates significantly (-40%). At the beginning of 2021, air traffic started to recover, especially in certain domestic and regional markets, and the Company announced in May 2021 an industrial ramp-up trajectory that has been confirmed at the end of Q3 2021. The Company will continue to monitor and adapt according to traffic evolutions and market situation and expectations; hence it is actively working and monitoring the ramp-up across the complete value chain for Single Aisle commercial aircraft. The Company is engaged in a process to adapt its industrial set-up to the new rates. This process is addressing the resource adaptation (headcount, skills and competencies) and the fixed cost reduction (industrial facilities, IT systems) while protecting inventory level and lead-time between aircraft configuration chosen by our customer and aircraft delivery. This encompasses the full industrial process from supply chain (including raw material, subcontracted work packages, equipment, etc.) to aircraft delivery. In this process, the Company focuses attention on quality industrial adherence Product Organisation Approval (POA).

For more details on specific programme risks, see “– Programme-Specific Risks” below.

Technologically advanced products and services

The Company offers its customers products and services that are technologically advanced, so the design, manufacturing, components and materials utilised can be complex and require substantial integration and coordination along the supply chain. In addition, most of the Company's products must function under demanding operating conditions. Throughout the lifecycle of its products, the Company performs checks and inspections, which may result in modifications, retrofits or other corrective actions, each of which may have an adverse effect on production, operations, in-service performance or financial condition. There can be no assurance that the Company's products or services will be successfully developed, manufactured or operated or that they will perform as intended.

Certain of the Company's contracts require it (i) to forfeit part of its expected profit; (ii) to receive reduced payments; (iii) to provide a replacement launch or other products or services; (iv) to provide cancellation rights; or (v) to reduce the price of subsequent sales to the same customer if its products fail to be delivered on time or to perform adequately. No assurances can be given that performance penalties or contract cancellations will not be imposed should the Company fail to meet delivery schedules or other measures of contract performance, in particular with respect to development programmes such as the A220, A350-900 and -1000 XWB, A400M, H160 or Ariane 6 and to modernisation programmes such as the A320neo

and the A330neo. See “– Programme-Specific Risks” below. In addition to the risk of contract cancellations, the Company may also incur significant costs or loss of revenues in connection with remedial action required to correct any performance issues detected in its products or services. Moreover, to the extent that a performance issue is considered to have a possible impact on safety, regulators could suspend the authorisation for the affected product or service.

Any significant problems with the development, manufacturing, operation, performance or safety of the Company’s products and services could have a significant adverse effect on the Company’s financial condition and results of operations as well as on the reputation of the Company and its products and services.

Dependence on public spending and on certain markets

In any single market, public spending (including defence and security spending) depends on a complex mix of geopolitical considerations and budgetary priorities, and may therefore be subject to significant fluctuations from year to year and country to country. Any termination or reduction of future funding or cancellations or delays impacting existing contracts may have a negative effect on the Company’s financial condition and results of operations. In instances where several countries undertake to enter together into defence or other procurement contracts, economic, political or budgetary constraints in any one of these countries may have a negative effect on the ability of the Company to enter into or perform such contracts.

The Company has a geographically diverse backlog. Adverse economic and political conditions, as well as downturns in broad economic trends in certain countries or regions, may have a negative effect on the Company’s financial condition and results of operations generated not only in those regions but may also affect the rest of the world due to complex economic interdependencies.

Airbus SE / 2021 Board Report 52

Availability of government and other sources of financing

In prior years, the Company and its principal competitors have each received different types of government financing of product research and development. However, no assurances can be given that government financing will continue to be made available in the future. Moreover, the availability of other outside sources of financing will depend on a variety of factors such as market conditions, the general availability of credit, the Company’s credit ratings, as well as the possibility that lenders or investors could develop a negative perception of the Company’s long- or short-term financial prospects if it incurred large losses or if the level of its business activity decreased due to an economic downturn. The Company may, therefore, not be able to successfully obtain additional outside financing on appropriate terms, or at all, which may limit the Company’s future ability to make capital expenditures, fully carry out its research and development efforts and fund operations.

Competition and market access

The markets in which the Company operates are highly competitive. With regard to the Company’s commercial aircraft business for aircraft with more than 150 seats, the Company today operates in a competitive duopoly. The design, development and production of commercial aircraft involves high barriers to entry (including certification requirements, large investment needs, skilled competencies and access to technology and long development cycles). Although the two main market participants for aircraft with more than 150 seats have secured significant order backlogs, the competition could launch new products or services that could have a negative impact on the Company’s revenues, future financial condition and results of operations.

New players are operating or seeking to operate in the Company’s existing markets, which may impact the structure and profitability of these markets. In addition, enterprises with different business models and alternative technologies could substitute the Company’s services and some of its products or component parts thereof. In some areas, competitors may have more extensive or more specialised engineering, manufacturing, support and marketing capabilities. There can be no assurance that the Company will be able to compete successfully against these future competitors or that the competitive pressures it faces in all business areas will not result in reduced revenues, market share or profit. See “– Environment, Human Rights, Health & Safety Risks – Climate-Related Risks” below.

In addition, some of the Company’s largest customers and/or suppliers may develop the capability to manufacture products or provide services similar to those of the Company. This would result in these customers/suppliers marketing their own products or services and competing directly with the Company for sales of these products or services, all of which could significantly reduce the Company’s revenues.

In addition, the contracts for many aerospace and defence products are awarded, implicitly or explicitly, on the basis of home country preference. Although the Company is a multinational company which helps to broaden its domestic market, it may remain at a competitive disadvantage in certain countries, especially outside of Europe, relative to local contractors for certain products. The strategic importance and political sensitivity attached to the aerospace and defence industries means that political considerations will play a role in the choice of many products and services for the foreseeable future.

The contracts for many aerospace and defence products and services are regularly associated with offset obligations. The Company may face difficulties to meet those obligations, to leverage the assets of the country and at the same time to optimise its industrial base and supply chain.

Major research and development programmes

The business environment in many of the Company’s principal operating business segments is characterised by extensive research and development costs requiring significant up-front investments with a high level of complexity. For the year 2021, research and development expenses were €2.7 billion. For the year 2020, research and development expenses were €2.9 billion (compared to €3.4 billion for the year 2019).

Due to the technologically advanced complex nature of the products that the Company produces and the long period, including ramp up time, it takes to produce them, the business plans underlying such investments often contemplate a long payback period before these investments are recouped, and assume a certain level of return over the course of this period in order to justify the initial investment. There can be no assurance that the commercial, technical and market assumptions underlying such business plans will be met, and consequently, the payback period or returns contemplated therein achieved. Significant technological, skills and industrial challenges exist to achieve the Company’s sustainability ambitions for the future generations of aerospace. These ambitions require cross industry and cross government collaboration to address the technological risks that need to be overcome. See “– Environment, Human Rights, Health & Safety Risks – Climate-Related

Risks" below.
Successful development of new programmes also depends on the Company's ability to attract and retain engineers and other professionals with the technical skills and experience required to meet its specific needs. Demand for such engineers may

Airbus SE / 2021 Board Report 53

often exceed supply depending on the market, resulting in intense competition for qualified professionals. The Company's attrition rate in 2021 was 6.6% overall (including subsidiaries) (compared to 5.8% overall in 2020). There can be no assurance that the Company will attract and retain the personnel it requires to conduct its operations successfully and in particular to attract and retain engineers and other professionals with the technical skills and experience required for its research and development programmes. Failure to attract and retain such personnel or an increase in the Company's employee turnover rate could negatively affect the Company's financial condition and results of operations more generally and particularly its ability to successfully execute its research and development programmes.

There is a risk of additional repercussions from COVID-19's impact on skills and expertise. Significant effort has been made to maintain key resources and cope with the increased departure of skilled staff with improved knowledge management and knowledge transfer schemes across the Company.

The COVID-19 crisis has impacted key company technological developments and competencies, but despite this, the Company continues seeking to further its development in sustainable technologies. This commitment directs a significant proportion of the longer term technology research efforts for future products and services and is based on solving complex problems by exploring multiple technology pathways. Retaining this ambitious programme is achieved with national research funding through frameworks such as CORAC, LUFO, ATI, CDTI and Horizon Europe where the frameworks enable the Company and the wider aviation ecosystem to mature and develop the required key competencies and technologies. No assurance can be given that the Company will achieve the anticipated level of returns from these programmes and other development projects, which may negatively affect the Company's financial condition and results of operations and competitiveness.

Acquisitions, divestments, joint ventures and strategic alliances

As part of its business strategy, the Company may acquire or divest businesses and/or form joint ventures or strategic alliances. Executing acquisitions and divestments can be difficult and costly due to the complexities inherent in integrating or carving out people, operations, technologies and products. There can be no assurance that any of the businesses that the Company intends to acquire or divest can be integrated or carved out successfully, as timely as originally planned or that they will perform well and deliver the expected synergies or cost savings once integrated or separated. In addition, regulatory, administrative or opposition by social partners or other contractual conditions can prevent transactions from being finalised. Each acquisition, divestment, joint venture and strategic alliance is very specific in its nature, purpose, risk and opportunities. The Company identifies risks through a detailed and systematic due diligence process and addresses the risks identified through price mitigation and/or appropriate contractual coverage, such as indemnification mechanisms, both being the tailored-made results of complex negotiations with the sellers/buyers and/or partners. The Company's business, results of operations and financial condition may be materially affected if these transactions will not be successfully completed or do not produce the expected benefits.

Public-private partnerships and private finance initiatives

Governmental customers may request proposals and grant contracts under schemes known as public-private partnerships ("PPPs"). PPPs differ substantially from traditional defence equipment sales, as they often incorporate elements such as:

- the provision of extensive operational services over the life of the equipment;
- continued ownership and financing of the equipment by a party other than the customer, such as the equipment provider;
- mandatory compliance with specific customer requirements pertaining to public accounting or government procurement regulations; and
- provisions allowing for the service provider to seek additional customers for unused capacity.

The Company is party to PPP and private finance initiatives ("PFI") contracts, for example Skynet 5 and related telecommunications services, and in the AirTanker ("FSTA") project both with the UK Ministry of Defence. One of the complexities presented by PFIs lies in the allocation of risks and the timing thereof among different parties over the life-time of the project.

There can be no assurance of the extent to which the Company will efficiently and effectively (i) compete for future PFI or PPP programmes; (ii) administer the services contemplated under the contracts; (iii) finance the acquisition of the equipment and the ongoing provision of services related thereto; or (iv) access the markets for the commercialisation of excess capacity. The Company may also encounter unexpected political, budgetary, regulatory or competitive risks over the long duration of PPP and PFI programmes.

Programme-specific risks

In addition to the risk factors mentioned above, the Company also faces the following programme-specific risks that could have a material impact on the Company's business, results of operations and financial condition.

The Company faces the following main challenges on its commercial programmes:

- adapt to rate and stabilise operational performance post-COVID-19 while maintaining high safety and quality standards;
- monitor and support the supply chain;

Airbus SE / 2021 Board Report 54

- accompany customers and facilitate deliveries to customers including by remote delivery process;
- ensure a strong customer focus to support return to operations; and
- protect priority projects and deliver developments as planned including A321XLR, Airspace, A350 Step7 (Standard 2022), A350 Freighter, A330-800, A330-900 251t MTOW, A330 Step4, A330 Bridge Tanker and Digital (DDMS and Skywise).

A320 Family programme. In response to the new COVID-19 market environment, the commercial aircraft production rate for the A320 Family was reduced to 40 per month in June 2020. In 2021, the Company announced demand for the A320 Family is expected to lead to a gradual increase in production from the rate of 40 per month to 43 in Q3 2021 and to 65 by summer 2023. The Company proactively and constantly monitors the backlog, the internal and external supply chain, including engines, so as to ensure readiness for further rate adaptations in accordance with traffic evolution, to minimise inventory levels, and secure aircraft storage capacity. In connection with the A320 Family programme, the Company faces the following challenges: ensure the A321XLR on-track development including A321XLR certification topics with primary airworthiness authorities, adapt and upgrade our industrial system and capability to meet the growing market demands and corresponding product mix within the family. Market demand for single aisle aircraft, production and supply chain capabilities will evolve in the next few years and the Company will closely monitor these evolutions including a projected significant increase in A321 production. Attention will remain high on ramp up engine availability and engine maturity in-service.

A400M programme. After the Company signed a contract amendment to restructure the contract, risks remain on development of technical capabilities (development effort as well as possible commercial agreement associated costs in order to reach Type Acceptance) and the associated costs, on securing sufficient export orders in time, on aircraft operational reliability in particular with regards to power plant and on cost reductions as per the revised baseline. For further information, please refer to the “– Notes to the IFRS Consolidated Financial Statements – Note 12: Revenue and Gross Margin”.

A350 XWB programme. In connection with the A350 XWB programme, the Company faces the following main challenges: to secure revised quarterly delivery targets post-COVID-19, monitor and support the supply chain, A350 non-structural surface degradation, reduce recurring costs to improve competitiveness within a widebody market recovering at a slower pace and deliver Step 7 as per adapted plan and develop the A350 Freighter. Decisions on further rate adaptation will depend on traffic evolution.

A330 programme. In response to the new COVID-19 market environment, the commercial aircraft production rate for the A330 programme was adapted to two per month in June 2020. Then, following new orders, the decision was taken in Q3 2021 to increase the production rate to almost three in 2023. Decisions on further rate adaptation will depend on traffic evolution. In connection with the A330 programme, the main challenges the Company faces are to secure product competitiveness in the widebody market segment, monitor and support the supply chain. The developments were on track in 2021: A330neo low speed performance improvement certification in February 2021, A330-900 first aircraft ever to receive EASA CO₂ certification in May 2021, A330neo alternate Centre of Gravity option certification in September 2021.

A220 programme. In connection with the A220 programme, the main challenges the Company faces are to secure the A220 cost reduction trajectory with a strong focus on its Design to Cost roadmap and recurring cost reduction, and to ensure an A220 book to bill above one to fill current open slots. As a consequence of the COVID-19 pandemic, the commercial aircraft production rates were adapted to rate five per month (in Mirabel and in Mobile) in 2020-2021 and will be increased to rate six early 2022. Attention will remain high on engine maturity in service.

A380 programme. In connection with the A380 programme, the Company faces the following main challenges: secure in service support for next decades and long-term competitiveness.

H225 programme. Airbus Helicopters continues to drive improvements across its product range as part of its commitment to raise safety standards. The H225 programme is still facing a challenge with the supply chain in a COVID-19 context.

H175 programme. The situation remains challenging on the commercial side: a tough market environment on its main offshore segment.

Tiger programme. The Tiger MKIII contract signature and the lifetime extension out of Tiger MKII contract are the key to the future of the programme. The Company faces the challenge to increase Tiger availability, whose action plans are producing first results.

NH90 programme. A transformation plan has been initiated to adapt to the challenges of a large and diverse in-service fleet with two axes: first to face a rising volume of maintenance and repairs, and second to improve fleet availability.

H160 programme. The main challenges for the H160 programme are to secure the entry-into-service, the FAA certification and the industrial ramp-up phase.

Border security. In connection with border security projects, the Company faces the following main challenges: meeting the schedule and cost objectives, taking into account the complexity of the local infrastructures to be delivered, and the integration of commercial-off-the-shelf products (radars, cameras and other sensors) interfaced into complex system networks; assuring efficient project and staffing; managing the rollout including subcontractors and customers. Negotiations on change requests in this respect along with schedule re-alignments remain ongoing. The Company continues to engage with its customer to agree a way forward on this contract. The outcome of these negotiations is presently unclear but could result in significant further financial impacts.

Defence programmes. The Company is engaged in major European defence collaboration programmes, such as Eurodrone and Future Combat Air System (FCAS), serving several European governments and partnering with several European companies of the defence sector. Such complex industrial programmes entail alignments and negotiations between many stakeholders on technical, industrial as well as on political matters. Due to the very nature of such discussions and the number of stakeholders, there is an inherent risk of lengthening the contract preparation phase and hence delaying the signature date.

4.6.3 LEGAL RISKS

Legal and regulatory proceedings

The Company is currently engaged in a number of active legal and regulatory proceedings. For further information, please refer to “Notes to the IFRS Consolidated Financial Statements – Note 38: Litigation and Claims”.

For the investigation by the UK Serious Fraud Office (“SFO”), France’s Parquet National Financier (“PNF”), and the US

The Company's legal proceedings with (DoS and DoJ) authorities, which were approved by the European and UK courts, regulators and regulator on 31 January 2020. The agreement resulted in a fine totalling € 3.6 billion plus costs to the French, UK, and US authorities. For further information about the investigation and related securities litigation, please refer to "Notes to the IFRS Consolidated Financial Statements – Note 38: Litigation and Claims" (Investigation by the SFO, PNF, DoJ, DoS and Related Commercial Litigation) and (Securities Litigation), respectively.

The Company expects to continue to spend time and incur expenses associated with its defence of legal and regulatory proceedings, regardless of the outcome, and this may divert the efforts and attention of management from normal business operations. Although the Company is unable to predict the outcome of these proceedings, it is possible that they will result in the imposition of damages, fines or other remedies, which could have a material effect on the Company's business, results of operations and financial condition. An unfavourable ruling could also negatively impact the Company's stock price and reputation.

In addition, the Company is from time to time subject to government inquiries and investigations of its business and competitive environment due, among other things, to the heavily regulated nature of its industry. Such inquiries and investigations may cover matters relating to, among other matters, anti-bribery laws and regulations, export control laws and regulations, securities law, trade law and competition law. An adverse decision in any such matter could have a material effect on the Company's business, results of operations and financial condition. In addition to the risk of an unfavourable ruling against the Company, any such inquiry or investigation could negatively affect the Company's reputation and its ability to attract and retain customers and investors, which could have a negative effect on its business, results of operations and financial condition. See "– Non-Financial Information – 6.1.5 Exemplify Business Integrity".

Anti-corruption laws and regulations

The Company is required to comply with applicable anti-bribery laws and regulations in jurisdictions around the world where it does business. To that end, an anti-corruption programme has been put in place that seeks to ensure adequate identification, assessment, monitoring and mitigation of corruption risks. Despite these efforts, ethical misconduct or non-compliance with applicable laws and regulations by the Company, its employees or any third party acting on its behalf could expose it to liability or have a negative impact on its business.

The Company may be subject to administrative, civil or criminal liabilities including significant fines and penalties, as well as suspension or debarment from government or non-government contracts for some period of time. The Company may also be required to modify its business practices and compliance programme and/or have a compliance monitor imposed on it. Any one or more of the foregoing could have a significant adverse effect on the Company's reputation and its business, results of operations and financial condition.

Airbus SE / 2021 Board Report 56

In 2016, for example, the Company announced that it had discovered misstatements and omissions in certain applications for export credit financing for the Company's customers, and had engaged legal, investigative and forensic accounting experts to conduct a review. Separately, the UK SFO announced that it had opened a criminal investigation into allegations of fraud, bribery and corruption in the civil aviation business of the Company, relating to irregularities concerning third party consultants. The Company was subsequently informed that the French authorities, the PNF, had also opened a preliminary investigation into the same subject and that the two authorities would act in coordination going forward. The Company engaged with the government of the US (DoS and DoJ) relating to conduct forming part of the SFO/PNF investigation that could fall within US jurisdiction. The Company also engaged with the government of the US concerning potential issues of ITAR Part 130 and related matters. On 31 January 2020, the French and UK courts and US court and regulator approved an agreement reached by the Company with the authorities. Any breach of the terms of the agreements by the Company could lead to rescission by the authorities of the terms of the agreements and reopening of the prosecutions. Prosecution could result in the imposition of further monetary penalties or other sanctions including additional tax liability and could have a material impact on the Financial Statements, business and operations of the Company. The agreements reached with authorities may lead to additional commercial litigation and arbitration against the Company and tax liability in the future, which could have a material impact on the Financial Statements, business and operations of the Company. For further information, please refer to "Notes to the IFRS Consolidated Financial Statements – Note 38: Litigation and Claims" (Investigation by the SFO, PNF, DoJ, DoS and Related Commercial Litigation).

Export control laws and regulations

The export market is a significant market for the Company. In addition, many of the products the Company designs and manufactures for military use are considered to be of national strategic interest. Consequently, the export of such products outside of the jurisdictions in which they are produced may be restricted or subject to licensing and export control requirements, notably by the UK, France, Germany and Spain, where the Company carries out its principal activities relating to military products and services as well as by other countries where suppliers are based, notably, the US. There can be no assurance (i) that the export controls to which the Company is subject will not become more restrictive, (ii) that new generations of the Company's products will not also be subject to similar or more stringent controls or (iii) that geopolitical factors or changing international circumstances will not make it impossible to obtain export licenses for one or more clients or constrain the Company's ability to perform under previously signed contracts. Reduced access to military export markets may have a significant adverse effect on the Company's business, results of operations and financial condition.

Operating worldwide, the Company must comply with several, sometimes inconsistent, sets of sanctions laws and regulations implemented by transnational / national / regional authorities. Depending on geopolitical considerations including national security interests and foreign policy, new sanctions regimes may be set up or the scope of existing ones may be widened, at any time, immediately impacting the Company's activities.

Although the Company seeks to comply with all such laws and regulations, even unintentional violations or a failure to comply could result in suspension of the Company's export privileges, or preclude the Company from bidding on certain government contracts (even in the absence of a formal suspension or debarment).

Furthermore, the Company's ability to market new products and enter new markets may be dependent on obtaining government certifications and approvals in a timely manner.

Dependence on joint ventures and minority holdings

The Company generates a proportion of its results through various consortia, joint ventures and equity holdings. The Company recognises its share in the results of its equity holdings in the proportion of the stake held. In 2021, the Company's total share of result from these arrangements amounted to € 40 million (compared to € 39 million in 2020 and € 299 million in 2019). The Company's individually material joint ventures are ArianeGroup (50%), MBDA (37.5%) and ATR GIE (50%). For further information, please refer to the "Notes to the IFRS Consolidated Financial Statements – Note 9: Investments Accounted for under the Equity Method" and "– Note 15: Share of Profit from Investments Accounted for under the Equity Method and Other Income from Investments".

The formation of partnerships and alliances with other market players is an integral strategy of the Company, and the proportion of sales generated from consortia, joint ventures and equity holdings may rise in future years. This strategy may from time to time lead to changes in the organisational structure, or realignment in the control, of the Company's existing joint ventures.

The Company exercises varying and evolving degrees of control in the consortia, joint ventures and equity holdings in which it participates. While the Company seeks to participate only in ventures in which its interests are aligned with those of its partners, the risk of disagreement or deadlock is inherent in a jointly controlled entity, particularly in those entities that require the unanimous consent of all members with regard to major decisions and specify limited exit rights. The other parties in these entities may also be competitors of the Company, and thus may have interests that differ from those of the Company.

Airbus SE / 2021 Board Report 57

Product liability and warranty claims

The Company designs, develops and produces a number of high profile products of large individual value, particularly civil and military aircraft and space equipment. The Company is subject to the risk of product liability and warranty claims in the event that any of its products fails to perform as designed. While the Company believes that its insurance programmes are adequate to protect it from such liabilities, no assurance can be given that claims will not arise in the future or that such insurance coverage will be adequate.

The Company follows a policy of seeking to transfer the insurable risk of the Company to external insurance markets at reasonable rates, on customised and sufficient terms and limits as provided by the international insurance markets. The insurance industry remains unpredictable. There may be future demands to change scope of coverage, premiums and deductible amounts. No assurance can be given that the Company will be able to maintain its current levels of coverage nor that the insurance coverages in place are adequate to cover all significant risk exposure of the Company.

Any problems in this respect may also have a significant adverse effect on the reputation of the Company and lead to a decline in demand for its products and services. Any reputational damage faced by the Company may be exacerbated due to the Company's visibility.

The Company cannot predict at this time the impact on it as a result of any product liability or warranty claims as such will depend on the nature and size of any such claim.

Intellectual property

The Company continuously seeks to develop and deliver new products to meet customers' evolving needs, while also improving its existing product lines. Technological innovation has been at the core of the Company's strategy since its creation. The Company's innovations often provide distinct competitive advantages, with many becoming standard in the aircraft industry. In addition, the Company designs, develops and produces a number of high profile products of large individual value, particularly civil and military aircraft and space equipment. Therefore, intellectual property ("IP") is one of the Company's most valuable assets and the protection of IP is critical to its business.

The Company relies upon patents, copyright, trademark, confidentiality and trade secret laws, and agreements with its employees, customers, suppliers and other parties, to establish and maintain its IP rights in its products and services and in its operations. In a typical year, the Company files around 800 new priority-establishing patent applications and files globally around 1,600 national patent applications in global markets where it seeks to protect its technology assets. The Company has granted patents for around 10,500 individual technologies with nearly 4,000 patents pending. This level of protection is benchmarked against peer and competitor companies and is considered sufficient to protect core, proprietary differentiating technology which is developed by the Company. Despite these efforts to protect its IP rights, any of the Company's direct or indirect IP rights could be challenged, invalidated or circumvented. Further, the laws of certain countries do not protect the Company's proprietary rights to the same extent as the laws in Europe and the US. Therefore, in certain jurisdictions the Company may be unable to protect its proprietary technology adequately against unauthorised third-party copying or use, which could adversely affect its competitive position. The Company may also face lack of certainty with respect to IP rights for existing or new research and development programmes and established or potential partnerships with private or public organisations, academic institutions and research councils, charities and government departments, where the relevant IP frameworks or user-rights/ownership governing those relationships is dependent on the UK's former status as a member state of the European Union.

In the event the Company is unable to adequately procure and protect critical IP it could potentially not implement its business strategy.

The Company has been accused of infringement on occasion and could have additional claims asserted against it in the future. These claims could harm its reputation, result in financial penalties or prevent it from offering certain products or services which may be subject to such third-party IP rights. Any claims or litigation in this area, whether the Company ultimately wins or loses, could be time-consuming and costly, harm the Company's reputation or require it to enter into licensing arrangements. The Company might not be able to enter into these licensing arrangements on acceptable terms. If a claim of infringement were successful against it, an injunction might be ordered against the Company, causing further losses. There are currently no significant claims of IP infringement pending against the Company. Minor claims and pre-dispute matters commonly settle either without the issuance of formal legal proceedings or during initial proceedings.

Airbus SE / 2021 Board Report 58

4.6.4 ENVIRONMENT, RIGHTS, HEALTH & SAFETY RISKS

Climate-related risks

Climate change may have a major impact on both the Company's industrial operations and its upstream and downstream value chain, including aircraft direct operations and the wider air transport ecosystem along with a strong influence on regulations and stakeholders expectations. Accordingly, climate-related risks can potentially affect the Company's business and competitiveness, its customers and other actors from the aviation industry.

The Company categorises its climate-related risks and opportunities according to the Task Force on Climate-related Financial Disclosures ("TCFD") recommendations. In particular, risks are sorted into two categories: transition and physical.

Transition risks

Technology: The Company has identified the risk of a reduction in the Company's business, results of operations and financial condition if a competitor brings a lower emission product to the market before it does. Delivering on commitments and potential future requirements to mitigate climate impacts will require significant technological developments for the commercial aircraft sector as well as appropriate infrastructure developments and other ecosystem adaptations. In the event that a competitor or new market participant has access to technological developments unavailable to the Company and is able to place on the market a large passenger aircraft with significantly lower emissions before the Company, climate mitigation requirements may push the market towards competing products until the Company and its partners can develop a competing alternative, which could lead to a loss of market competitiveness and reduced revenue.

Market: Changes in societal expectations and growing concerns about climate change may impact market demand for air transport. In particular, a change in certain passengers' behaviour or their transition to other transport modes could decrease the demand for the Company's current and future generation of products, causing a loss of revenues.

The development of future products based on the ZEROe concepts will require significant investments in both products and supporting infrastructure, which could directly impact the operating costs of such a product.

The competitiveness of this next generation product will also strongly depend, among other factors, on the evolution of the price of carbon dioxide emissions. It is, therefore, crucial for the Company to account at each step of development for market expectations, while staying affordable for its customers and competitive with regards to competitors' portfolios. The failure to do so could result in the Company losing market share to competitors, as well as affecting the Company's return on investment with regards to future commercial aircraft products.

Energy transition: The Company has identified a risk of insufficient availability of low carbon fuels (such as sustainable aviation fuels or hydrogen) and the limited number of innovative certified pathways that may compromise the decarbonisation ambition of the Company and for the whole aviation sector.

Policy and legal: Aviation is a complex industry, with long product development cycles and where change takes a long time to be implemented. A rapid evolution of climate-related policies (such as carbon pricing policies and sustainable aviation fuel policies) and regulatory frameworks (CO₂ standards, sustainable finance, emissions trading systems, aircraft operation restrictions among others) could generate fast-changing requirements and could obstruct new product development pathways. As aviation is a global industry, policies and regulatory frameworks implemented at regional level rather than international level, or evolving at a different speed depending on the region, would unbalance a competitive level playing field for manufacturers and operators possibly creating market distortion. This could result in a loss of competitiveness for the Company.

Reputation: Reputational risks could be divided in several categories. Firstly, there is a risk that misperceptions about the Company's environmental performance is used as a key decision-making criteria for consumers, investors, or even new talents. Secondly, there is a risk that the Company's reputation is damaged by growing societal concerns about the climate change impact of aviation or by the lack of transparency on progress made to address climate-related issues.

As an example, the Company was the first manufacturer to disclose its ambition to bring a zero-emission aircraft to the market. If the ambition is perceived as unattainable or if the Company is not able to deliver on its ambition, it could result in reputational damage leading to reduced investment, loss of revenues and reduced attractiveness. A similar situation could occur if the Company's environmental performance is not on par with its expressed ambition.

Physical risks

The foreseen consequences of climate change include harsher average weather conditions and more frequent extreme weather events, such as hurricanes, hail storms, heat waves or extreme cold spells. To cope with degraded operational

Airbus SE / 2021 Board Report 59

conditions, costly, time-consuming and more frequent redesigns may be required by the Company to improve its products to meet more stringent regulation and certification criteria or standards.

The effects of climate change on weather conditions may impact operating conditions of the Company's industrial activities (including the activities of its supply chain) with higher occurrence and severity of, for instance, hurricanes, hail storms or floods. As a consequence, industrial activities may be disrupted or interrupted if a part of the Company's industrial system or its supply chain is affected or impaired by such events. The Company's future installations may require more stringent requirements and planning to withstand more intense weather events.

Regulated chemicals

Evolution of the chemicals' regulatory framework may lead to short- and long-term potential bans and restrictions, and result in business disruption across the Company's value chain.

With the aim of protecting human health and the environment, regulators at national and international level have developed

a stringent set of legal requirements that are continuously evolving to regulate, minimise the use of and eliminate various substances.

Due to the above-mentioned regulatory requirements, the Company has identified the risk of chemicals obsolescence that may lead to supply disruption.

In order to reduce the use of targeted substances and mitigate the risk of disruption in its operations and supply chain, the Company's policy is the development of alternative technologies that use substances of less concern, and substitution of these when suitable alternatives meeting stringent certification and airworthiness criteria are available for deployment.

Complementary to substitution, digital solutions are being developed to improve traceability of regulated substances in our products from the early design steps down to the end of life.

Regulatory risks

The Company's expenditure associated with environmental, human rights, health and safety challenges may increase due to both increased costs of compliance with regulations in those areas as well as reputational and litigation risks.

Given the scope of its activities and the industries in which it operates, the Company is subject to stringent environmental, human rights, health and safety laws and regulations in numerous jurisdictions around the world. The Company therefore incurs, and expects to continue to incur, significant capital expenditure and other operating costs to comply with increasingly complex laws and regulations covering the protection of the natural environment as well as occupational health and safety and human rights. Health and safety expenditures include investments in the identification and the prevention, elimination or control of physical and psychological risks to people arising from work, including chemical, biological, mechanical and physical agents. Risks that could arise from work activities include the possibility of injury, physical and mental ill-health, damage to equipment, business interruption and regulatory action. Any reputational risk and claims against the Company that may result will also need to be managed and may lead to additional health and safety expenditure being required. In 2021, the Company maintained its stringent COVID-19 risk management measures in the workplace. However, the Company recognises that its employees continue to face physical and mental ill-health risks due to the COVID-19 associated public health controls, combined with the Company adaptation plans. Environmental protection expenditures include costs to prevent, control, eliminate or reduce emissions to the environment, waste management, the content of the Company's products, and reporting and warning obligations. Current trends indicate that regulatory pressure on the international scene to reduce the environmental footprint of industry is steadily growing (circular economy and resources efficiency, energy transition and climate change engagement, air and water quality improvement). Moreover, new laws and regulations, the imposition of tougher license requirements, increasingly strict enforcement or new interpretations of existing laws and regulations may cause the Company to incur increased capital expenditure and operating costs in the future in relation to the above, which could have a negative effect on the Company's business, results of operations and financial condition.

If the Company fails to comply with environmental, human rights, health and safety laws and regulations, even if caused by factors beyond its control, that failure may result in the levying of civil or criminal penalties and fines against it. Regulatory authorities may require the Company to conduct investigations and undertake remedial activities, curtail operations or close installations or facilities temporarily to prevent imminent risks. In the event of an industrial accident or other serious incident, employees, customers and other third parties may file claims for ill-health, personal injury, or damage to property or the environment (including natural resources). Further, liability under some environmental, human rights, health and safety laws

Airbus SE / 2021 Board Report 60

can be imposed retrospectively, on a joint and several basis, and in relation to contaminated sites, without any finding of non-compliance or fault. These potential liabilities may not always be covered by insurance, or may be only partially covered.

The obligation to compensate for such damages could have a negative effect on the Company's business, results of operations and financial condition.

In addition, the various products manufactured and sold by the Company must comply with relevant health, safety and environmental laws, for example those designed to protect customers and downstream workers or communities, and those covering substances and preparations, in the jurisdictions in which they operate. Although the Company seeks to ensure that its products meet the highest quality standards, increasingly stringent and complex laws and regulations, new scientific discoveries, delivery of defective products or the obligation to notify or provide regulatory authorities or others with required information (such as under the European Union Regulation known as "REACH", which addresses the production and use of chemical substances) may force the Company to adapt, redesign, redevelop, recertify and/or eliminate its products from the market thereby incurring significant additional costs. Seizures of defective products may be pronounced, and the Company may incur administrative, civil or criminal liability. Any problems in this respect may also have a significant adverse effect on the reputation of the Company and lead to a decline in demand for its products and services.

Despite compliance with all applicable laws and regulations, the Company's reputation and the demand for its products may also be affected by the public perception of environmental and societal impacts of the Company's products in operation (such as the emission of greenhouse gases or noise) and of the impacts of the Company and its supply chain industrial operations on local communities, on the environment and on air and water quality.

The Company cannot predict at this time the impact on it as a result of environmental, human rights, health and safety matters, and may be adversely affected by them in the manner described above. For further information on sustainability-related risks, see "6.2. Non-Financial Information – 6.1.1 The Company's Approach to Sustainability".

5. Financial performance

The Airbus SE IFRS Consolidated Financial Statements are prepared in accordance with International Financial Reporting Standards ("IFRS").

5.1 IFRS Consolidated Financial Statements

Please refer to the "Airbus SE – IFRS Consolidated Financial Statements" and the "Notes to the IFRS Consolidated Financial Statements" for the years ended 31 December 2021 and 2020.

IFRS Consolidated Income Statement

Please refer to the "Airbus SE – IFRS Consolidated Income Statement" for the years ended 31 December 2021 and 2020.

Revenues

Revenues increased 4 percent to € 52.1 billion (2020: € 49.9 billion), mainly reflecting the higher number of commercial aircraft deliveries, partially offset by less favourable foreign exchange rates. A total of 611 commercial aircraft were delivered (2020: 566 aircraft), comprising 50 A220s, 483 A320 Family, 18 A330s, 55 A350s and 5 A380s. Revenues generated by Airbus' commercial aircraft activities increased 6 percent, largely reflecting the higher deliveries compared to 2020. Airbus Helicopters delivered 338 units (2020: 300 units), including the first H160, with revenues rising 4 percent reflecting growth in services and the higher deliveries. Revenues at Airbus Defence and Space decreased by 2 percent, mainly driven by Military Aircraft, partially offset by Space Systems. Eight A400M aircraft were delivered in 2021.

EBIT and Financial Result

EBIT Adjusted – an alternative performance measure and key indicator capturing the underlying business margin by excluding material charges or profits caused by movements in provisions related to programmes, restructuring or foreign exchange impacts as well as capital gains/losses from the disposal and acquisition of businesses – was € 4,865 million (2020: € 1,706 million).

The EBIT Adjusted related to Airbus' commercial aircraft activities increased to € 3,570 million (2020: € 618 million), mainly driven by the delivery performance and efforts on cost containment and competitiveness.

Commercial aircraft production is progressing in line with previously announced plans, in a complex environment. Specifically on the A320 Family, the ramp-up is on trajectory to achieve rate 65 by summer 2023 and the Company continues to de-risk notably by enabling all assembly sites to become A321-ready. For A320 Family production rates beyond 2023, the Company is still in the assessment phase and working with suppliers to potentially enable an increase above rate 65.

Airbus Helicopters' EBIT Adjusted increased to € 535 million (2020: € 471 million), mainly driven by support and services, programme execution and cost focus.

EBIT Adjusted at Airbus Defence and Space increased to € 696 million (2020: € 660 million), reflecting continued cost containment.

On the A400M programme, development activities continued toward achieving the revised capability roadmap. Retrofit activities are progressing in close alignment with the customer. In the fourth quarter of 2021, a charge of € 0.2 billion was recorded mainly reflecting the updated estimates of the delivery pattern of the launch contract. This is reflected in EBIT reported.

EBIT (reported) amounted to € 5,342 million (2020: € -510 million), including net Adjustments of € +477 million.

These Adjustments comprised:

- ▶ € +274 million related to the A380 programme, of which € +84 million were in Q4;
- ▶ € +122 million gain from the sale of one site in France, recorded in Q4;
- ▶ € -212 million related to the A400M, of which € -209 million were in Q4;
- ▶ € -38 million negative impact from foreign exchange and balance sheet revaluation, of which € +127 million were in Q4;
- ▶ € +331 million of Adjustments including mainly around € 0.2 billion of provision release related to the restructuring plan, and payments by suppliers. € +285 million were booked in Q4.

The financial result was € -315 million (2020: € -620 million). It mainly reflects the net interest result of € -246 million as well as the revaluation of financial instruments and of certain equity investments. **Net Income** was € 4,213 million (2020 net loss: € -1,133 million) with reported **earnings per share** of € 5.36 (2020 loss per share: € -1.45).

Table 1 – Revenue and EBIT (reported) by Business Segment

<i>(In € million)</i>	Revenues			EBIT (reported)		
	2021	2020	Change	2021	2020	Change

Total	52,149	49,912	+4%	5,342	(510)	-

IFRS Consolidated Statement of Financial Position

Please refer to the “Airbus SE – IFRS Consolidated Statement of Financial Position” at 31 December 2021 and 2020.

Intangible Assets and Property, Plant and Equipment

Intangible assets increased by € +168 million to € 16,367 million (2020: € 16,199 million). Intangible assets mainly relate to goodwill of € 13,028 million (2020: € 12,999 million). The annual impairment tests performed in 2021 led to no impairment charge.

Property, plant and equipment decreased by € -138 million to € 16,536 million (2020: € 16,674 million). Property, plant and equipment include right-of-use assets for an amount of € 1,698 million as of 31 December 2021 (2020: € 1,804 million).

Investments Accounted for under the Equity Method

Investments accounted for under the equity method increased by € +94 million to € 1,672 million (2020: € 1,578 million). They mainly include the equity investments in ArianeGroup, MBDA and ATR GIE.

Other Investments and Other Long-Term Financial Assets

<i>(In € million)</i>	31 December	
	2021	2020
Other investments	2,511	2,245

Other long-term financial assets	1,490	1,610
Total non-current other investments and other long-term financial assets	4,001	3,855
Current portion of other long-term financial assets	537	468
Total	4,538	4,323

Other investments mainly comprise the Company's participations and include the remaining investment in Dassault Aviation (9.90%, 2020: 9.90%) amounting to € 786 million at 31 December 2021 (2020: € 742 million).

Other long-term financial assets and the **current portion of other long-term financial assets** include other loans in the amount of € 1,909 million as of 31 December 2021 (2020: € 1,841 million), and the sales financing activities in the form of finance lease receivables and loans from aircraft financing.

Inventories

Inventories of € 28,538 million (2020: € 30,401 million) decreased by € -1,863 million. This is driven by Airbus (€ -1,944 million), and mainly reflects the delivery of the last A380 aircraft and the reduction in the widebodies inventory.

Provisions

<i>(In € million)</i>	31 December	
	2021	2020
Provisions for pensions	7,072	9,980
Other provisions	8,209	10,563
Total	15,281	20,543
<i>thereof non-current portion ⁽¹⁾</i>	<i>10,771</i>	<i>14,298</i>
<i>thereof current portion ⁽¹⁾</i>	<i>4,510</i>	<i>6,245</i>

(1) Previous year allocation between non-current and current provisions has been restated.

As of 31 December 2021, **provisions for pensions** decreased mainly due to the change in financial assumptions of € 1,453 million reflecting the further strengthening of interest rates and increased inflation assumptions in Germany, France, Canada and the UK and the increase in plan assets of € 1,341 million.

Other provisions decreased mainly due to the restructuring provision recorded in 2020 in response to the COVID-19 pandemic and a decrease in provisions for onerous contracts due to the delivery of the last A380 aircraft, the utilisation and net presentation of the A400M programme losses against inventories and the reduction in the A220 programme.

Airbus SE / 2021 Board Report 64

Other Financial Assets and Other Financial Liabilities

Other Financial Assets

<i>(In € million)</i>	31 December	
	2021	2020
Positive fair values of derivative financial instruments	664	3,451
Others	27	32
Total non-current other financial assets	691	3,483
Receivables from related companies	803	1,158
Positive fair values of derivative financial instruments	341	973
Others	307	301
Total current other financial assets	1,451	2,432
Total	2,142	5,915

Other Financial Liabilities

<i>(In € million)</i>	31 December	
	2021	2020
Liabilities for derivative financial instruments	2,640	1,834
European Governments' refundable advances	3,730	3,712
Others	192	111
Total non-current other financial liabilities	6,562	5,657
Liabilities for derivative financial instruments	1,923	983
European Governments' refundable advances	131	200
Liabilities to related companies	180	130
Others	298	456
Total current other financial liabilities	2,532	1,769
Total	9,094	7,426

The total net fair value of derivative financial instruments decreased by € -5,165 million to € -3,558 million (2020: € 1,607 million) as a result of the strengthened US dollar versus the euro associated with the mark to market valuation of the hedge portfolio.

In 2021, the European Governments' refundable advances decreased by € -51 million to € 3,861 million (2020: € 3,912 million).

Other Assets and Other Liabilities

Other Assets

<i>(In € million)</i>	31 December	
	2021	2020

Total	4,115	3,596

Airbus SE / 2021 Board Report 65

Total equity

The Company's shares are exclusively ordinary shares with a par value of € 1.00. The following table shows the development of the number of shares issued and fully paid:

<i>(In number of shares)</i>	2021	2020
Issued at 1 January	784,149,270	783,173,115
Issued for ESOP	1,934,420	976,155
Issued for convertible bond	0	0
Issued at 31 December	786,083,690	784,149,270
Treasury shares	(454,735)	(432,875)
Outstanding at 31 December	785,628,955	783,716,395

Holders of ordinary shares are entitled to dividends and to one vote per share at general meetings of the Company.

Equity attributable to equity owners of the parent (including purchased treasury shares) amounts to € 9,466 million (2020: € 6,445 million) representing an increase of € +3,021 million. This is due to a net income for the period of € +4,213 million and a decrease in other comprehensive income, principally related to the mark to market revaluation of the hedge portfolio of € -3,710 million partly offset by a change in actuarial gains and losses of € +2,363 million.

The **non-controlling interests ("NCI")** from non-wholly owned subsidiaries increased to € 20 million as of 31 December 2021 (2020: € 11 million). These NCI do not have a material interest in the Company's activities and cash flows.

Net Cash

The net cash position provides financial flexibility to fund the Company's operations, to react to business needs and risk profile and to return capital to the shareholders.

<i>(In € million)</i>	31 December	
	2021	2020
Cash and cash equivalents	14,572	14,439
Current securities	1,317	1,618
Non-current securities	6,794	5,350
Gross cash position	22,683	21,407
Short-term financing liabilities	(1,946)	(3,013)
Long-term financing liabilities	(13,094)	(14,082)
Total	7,643	4,312

The **net cash** position on 31 December 2021 amounted to € 7,643 million (2020: € 4,312 million), with a gross cash position of € 22,683 million (2020: € 21,407 million).

Cash and Cash Equivalents

Cash and cash equivalents are composed of the following elements:

<i>(In € million)</i>	31 December	
	2021	2020
Bank account and petty cash	1,964	4,173
Short-term securities (at fair value through profit and loss)	12,075	9,654
Short-term securities (at fair value through OCI)	533	512
Others	0	100
Total cash and cash equivalents	14,572	14,439

Only securities with a maturity of three months or less from the date of the acquisition, that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value, are recognised in cash equivalents.

Securities

The Company's securities portfolio amounts to € 8,111 million and € 6,968 million as of 31 December 2021 and 2020, respectively. The security portfolio contains a non-current portion of € 6,794 million (2020: € 5,350 million), and a current portion of € 1,317 million (2020: € 1,618 million).

Financing liabilities

(In € million)	31 December	
	2021	2020
Bonds and commercial papers	11,061	12,032
Liabilities to financial institutions	467	418
Loans	75	94
Lease liabilities	1,491	1,538
Total long term financing liabilities	13,094	14,082
Bonds and commercial papers	0	1,075
Liabilities to financial institutions	26	111
Loans	96	94
Lease liabilities	245	260
Others ⁽¹⁾	1,579	1,473
Total short term financing liabilities	1,946	3,013
Total	15,040	17,095

(1) Included in "others" are financing liabilities to joint ventures.

Long-term financing liabilities, mainly comprising of bonds and lease liabilities, decreased by € -988 million to € 13,094 million (2020: € 14,082 million), mainly due to pre-payment of a US\$1 billion bond issued on 9 April 2013 in the US institutional market with an original maturity of ten years.

Short-term financing liabilities decreased by € -1,067 million to € 1,946 million (2020: € 3,013 million), mainly due to the repayment of the exchangeable bonds to be convertible into Dassault Aviation shares issued on 14 June 2016 for an amount of € 1.0 billion.

Free Cash Flow

Free cash flow before M&A and customer financing was € 3,515 million (2020: € -6,935 million), reflecting efforts on cash containment and a decrease in working capital mainly driven by inventory improvement. **Free cash flow** was € 3,511 million (2020: € -7,362 million).

Order Intake and Order Book

Gross commercial aircraft orders totalled 771 (2020: 383 aircraft) with net orders of 507 aircraft after cancellations (2020: 268 aircraft). Included were the first A350 freighter orders, confirming customer demand for this new programme. The order backlog was 7,082 commercial aircraft on 31 December 2021 (end 2020: 7,184 aircraft). Airbus Helicopters booked 414 net orders (2020: 268 units), achieving a book-to-bill ratio well above 1 both in terms of units and in value. These included 52 H160s of which 30 were the first batch of H160M military versions for France's Joint Light Helicopter programme. Airbus Defence and Space's order intake by value increased to € 13.7 billion (2020: € 11.9 billion), representing a book-to-bill ratio of around 1.3. Included were key orders in the Military Aircraft business such as the in-service support of the German and Spanish Eurofighter fleets as well as good export momentum for the C295, A330 MRTT and A400M airlifter.

Order intake by value increased to € 62.0 billion (2020: € 33.3 billion) with the **order book** valued at € 398 billion on 31 December 2021 (year-end 2020: € 373 billion). The increase in the backlog value mainly reflected the strengthening US dollar.

Table 2 – Order Intake and Order Book by Business Segment

	Order Intake (net)			Order Book		
	2021	2020	Change	2021	2020	Change
Airbus (in units)	507	268	+89%	7,082	7,184	-1%
Airbus (in € million)	40,004	16,089	+149%	345,101	324,675	+6%
Airbus Helicopters (in units)	414	268	+54%	739	663	+11%
Airbus Helicopters (in € million)	8,552	5,519	+55%	17,985	15,782	+14%
Airbus Defence and Space (in € million)	13,656	11,862	+15%	36,131	33,505	+8%

5.2 Information on Airbus SE Auditors

	Date of first appointment	Expiration of current term of office ⁽¹⁾
Ernst & Young Accountants LLP Boompjes 258 3011 XZ Rotterdam Postbus 488 3000 AL Rotterdam The Netherlands Represented by N.M. Pul	28 April 2016	12 April 2022

(1) A resolution will be submitted to the Annual General Meeting of Shareholders in 2022, in order to appoint Ernst & Young Accountants LLP as the Company's auditors for the 2022 financial year.

Ernst & Young Accountants LLP has a licence from the AFM to perform statutory audits for Public Interest Entities and its representative is member of the NBA (Koninklijke Nederlandse Beroepsorganisatie van Accountants – the Royal Netherlands Institute of Chartered Accountants). The NBA is the professional body for accountants in the Netherlands.

6. Non-financial information and other corporate activities

6.1 Non-financial information - "Airbus Sustainability Report"

6.1.1 THE COMPANY'S APPROACH TO SUSTAINABILITY

Purpose

The Company's purpose is to pioneer sustainable aerospace for a safe and united world. It aims to lead the way in the decarbonisation of the aerospace industry, to unite and safeguard the citizens of the world, and continually expand human knowledge of our universe, from critical events on earth to the exploration of space. To this aim, the Company designs, manufactures and delivers aerospace products, services and solutions to customers on a worldwide scale bringing essential value to society and contributing to the UN Sustainable Development Goals ("SDGs") through its core business and how it runs it.

First of all, **the Company connects**. Connections are vital to making the world a better place. That's why the Company unites people and organisations across the globe; physically with its commercial aircraft and helicopters; and virtually with its connectivity solutions, allowing them to connect and understand each other.

The Company serves communities. Its satellites and tracking systems help make oceans safer with solutions that monitor

system protect public safety and healthcare assets. It provides essential infrastructure and firefighting, fireproofing, hoisting, hoisting or inaccessible areas of local communities as they can often be the only tool able to transport heavy loads, building materials, supplies, cargo and more. And technology solutions from the Company protect many critical systems from cyberattacks.

The Company saves lives. When a humanitarian crisis arises, its aircraft help transport patients for urgent medical care, and they assist in search efforts to find those marooned at sea, stranded in the mountains, or isolated in remote regions. Its Earth observation satellites are tasked to acquire images of the concerned area. This imagery is delivered to relevant authorities, together with archived data, to rapidly assess the extent of damage and support rescue planning by allowing actions to be prioritised, and identifying if roads, bridges and airport runways are still operational.

The Company protects. Its defence products and services help countries protect their citizens, values and vital infrastructure. In an unstable world, this security is a prerequisite of peace, the rule of law, political stability, democracy, environmental sustainability, human rights, economic development and prosperity, and scientific progress. The Company manufactures helicopters, fighter jets and military transport planes that allow nations to safeguard their airspace and respond to natural disasters. The Company supplies intelligence capabilities as well as terrestrial space and cyber security services. And it provides secure communications to governments and organisations devoted to public safety. All help to make the world a safer place. Its defence activities contribute to diplomacy, conflict resolution and a multilateral approach to international relations. By supplying EU and NATO member states with advanced military equipment, it strengthens their diplomatic influence and credibility on the global stage – and in turn that of international institutions such as the UN and NATO, thereby contributing to SDG 16 - Peace, Justice and Strong Institutions.

The Company explores. It believes the exploration of our universe will enrich life for generations to come. Its space technologies and satellite imagery solutions continually expand human knowledge of our universe, from the ability to capture and analyse data on climate change and critical events on Earth, to providing the solutions that enable deep-space exploration. For decades, the Company has been at the very heart of space exploration. It's at the forefront of creating the technologies that allow mankind to send spacecraft to planets, moons and comets both near our sun and millions of kilometres away.

GENERAL	GRI	SDGs	Others
	102 General Disclosures	4, 5, 8, 9, 12, 13, 16, 17	Vigilance Plan
Highest governance body(ies) involved	Board of Directors / ECSC Executive Committee supported by topic-focused Committees		
Commitments to external frameworks	UN Global Compact, The Ten Principles, Sustainable Development Goals		

Resources: [Sustainability on Airbus.com](#), [Airbus Tax Strategy](#), [Innovation contributing to a more sustainable world on Airbus.com](#), [Earth monitoring and understanding \(e.g. Climate change monitoring, Application for sustainable agriculture\)](#), [Example partnership for innovation: ANITI project](#), [Toulouse University \(ANITI\)](#), [The Future of Hydrogen by the IEA](#), [ATAG Benefits Beyond Borders fact sheet](#), [ASD Fact Sheet 2021](#), [UN Global Compact](#).

Additional indirect contributions

The Company's contribution to a more prosperous and sustainable society goes well beyond what it offers directly through its products and services.

For example, as one of the most important players in the aviation industry, the Company contributes significantly to SDG 8 "Decent Work and Economic Growth" as highlighted through the 2020 ATAG Benefits Beyond Borders - global fact sheet, found on the ATAG website (figures reflect pre-Covid 19 situation, a "normal" year for air transport):

As a major European defence manufacturer, the Company also has significant economic impact across Europe. According to the AeroSpace and Defence Industries Association of Europe (ASD) the industry supports over 462,000 high-skilled jobs across the continent, all contributing to Europe's economic prosperity with €119 billion in annual revenue, €45.6 billion of which are dedicated to exports.

While the Company contributes to the global economy as a whole it also contributes to the economic development of the communities it operates in. Full aerospace ecosystems, often bringing together academia, research centers and corporations, all with high value-added jobs, often develop around the Company's sites such as those in Toulouse or Hamburg. This development is accelerated thanks to the Company's innovation ecosystem such as the recently launched Airbus Scale

activities, in new approaches Airbus State will bring together and identify internal or external partners, engage on products and company building developed into solutions for the external world, bringing them to market and attracting external investments that could result in spin-offs. This generates value for the Company but also the local communities where these new companies will set foot and prosper.

There are many other examples of how, in the process of developing its products and services, the Company is stimulating innovations and developments across the aerospace ecosystem, benefiting society more broadly.

For example, as the Company prepares for its ZEROe aircraft, it is stimulating multiple innovations and development around the use of hydrogen from low carbon and renewable hydrogen production and storage to combustion and propulsion, all beneficial beyond aerospace. As an example, by committing to a hydrogen-powered aircraft by 2035 the Company is priming demand, stimulating low carbon and renewable hydrogen production capacity. Currently, less than 0.1% of global dedicated hydrogen production comes from water electrolysis according to the International Energy Agency (IEA)'s 2019 report The Future of Hydrogen. However, this is expected to rapidly change. The cost of renewable energies is falling at an

unprecedented rate. And investment in electrolysers – the “clean” technology used to separate hydrogen and oxygen atoms in water – is expected to boom worldwide.

Sustainability commitments

Furthermore, the Company understands that contributing to a sustainable society must be achieved not just through what it does but also how it does it, aiming at minimising negative impact and maximising the positive. In order to give direction and focus, in 2020 the Company updated its sustainability strategic framework around the below listed four sustainability priority commitments that apply across its entire value chain. These commitments are in close connection with the UN SDGs and contribute more specifically to eight of them.

The Company's four Commitments	Material topics	SDGs	Section
#1 Lead the journey towards clean aerospace	Environmental impact of our operations Environmental impact of our products		6.1.2
#2 Build our business on the foundation of safety and quality	Product Safety Cybersecurity Health & Safety		6.1.3
#3 Respect human rights and foster inclusion	Human Rights Inclusion & Diversity Labour Relations People		6.1.4
#4 Exemplify business integrity	Business Integrity		6.1.5

Across each commitment the Company has set key performance indicators (“KPIs”) and targets enabling the Company to monitor progress towards these ambitions. These can be found in “ – 6.1.8 ESG Data Board”, which gathers all reported sustainability metrics. They can also be found in the related sections of this chapter which is structured around each of the four commitments above, completed by two sections which cut across all four commitments, “ – 6.1.6 Responsible Supply Chain” and “ – 6.1.7 Community Impact”.

Several sources were essential in deciding on the four commitments, including the 2019 materiality assessment, a thorough benchmark, an analysis of market and regulatory trends, an evaluation of ESG risks in the Company’s risk report, a human rights gap analysis and the consideration of the Company’s values.

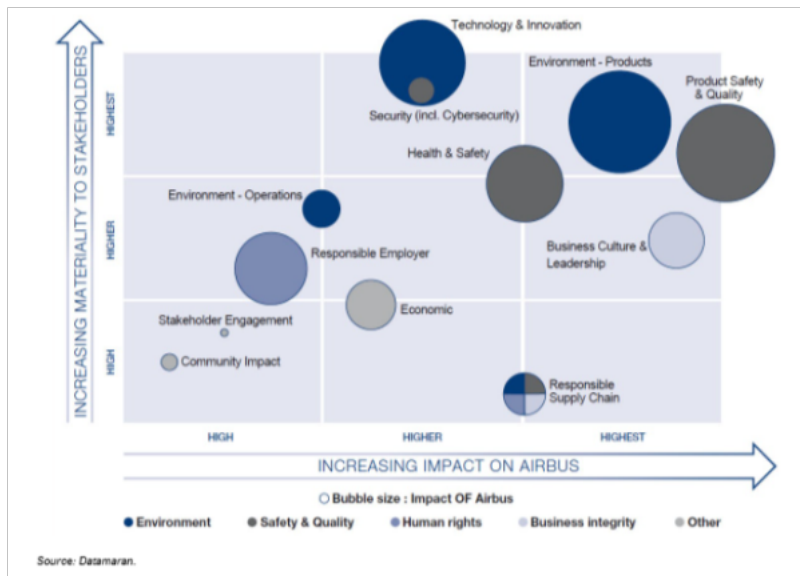

Stakeholder engagement

At a strategic level, the 2019 materiality assessment was a critical exercise in capturing the voice of 12 of the Company’s most important stakeholder groups, helping it identify which ESG issues were most material to them, and integrating this into its strategy. These key stakeholder groups included:

Customers	NGOs	Authorities	MRO providers
Suppliers	Investors	Governments	Airports
Partners	Employees	Industry Associations	Community at large

The stakeholder viewpoint was captured via a mix of surveys and artificial intelligence (via analysis of reports, legislation and media sources). The materiality viewpoint of stakeholders was mapped against the actual or potential impact on the Company of identified environmental, social and governance (“ESG”) issues, in addition to an analysis of which ESG issues the Company has, or could have, the most impact on. These were both captured via surveys sent to the Company’s executives. Results led to the following three-dimensional materiality matrix, fundamental in establishing the Company’s four commitments. The intention is to launch a new assessment in 2022.

Materiality matrix

Governance

Conscious of the strategic importance of sustainability, the Company has defined an adapted governance and organisation at the highest level.

Hence, oversight has been established at the Board of Directors level with the Ethics, Compliance and Sustainability Committee (“ECSC”). For further information about the ECSC, see “– Corporate Governance – 4.1 Management and Control”. The ECSC is responsible for assisting the Board of Directors to oversee the Company’s:

- Culture and commitment to ethical business, integrity and sustainability;
- Ethics & Compliance programme, organisation and framework for the effective governance of ethics and compliance, including all associated internal policies, procedures and controls; and
- Sustainability strategy and effective governance to ensure that sustainability-related topics are taken into account in the Company’s strategy and objectives.

Under the Board Rules, the Board of Directors delegates the day-to-day management of the Company to the CEO, who, supported by the Executive Committee, makes decisions with respect to the management of the Company, including sustainability. The Executive Committee has the responsibility to provide top level expectations and direction while overseeing and validating the sustainability strategy. This entails validating sustainability targets including those integrated into the Top Company Objectives .

The Executive Committee is supported by several committees or boards linked to the Company’s four sustainability commitments:

- The Environment Executive Steering Committee, the Inclusion & Diversity Board as well as the Product Safety Board, all chaired by EC members.

- The Steering Committees of the Human Rights and Sustainable Supply Chain Roadmaps, both sponsored by Executive Committee members.

Other sustainability topics such as Health & Safety and Business Integrity are brought directly to the attention of the Executive Committee.

The Company also believes the integration of sustainability criteria in its reward mechanisms is an important enabler for accelerating its sustainability ambitions. A sustainability component is integrated into the Common Collective Component of the CEO's variable remuneration, accounting for 20% of the payout, see "– Corporate Governance – 4.4 Remuneration Policy. This principle also applied to the other members of the Executive Committee who do not serve on the Board of Directors, and to a large extent to executives employed at the Company.

Organisation and policy framework

The Sustainability & Environment team put in place in January 2020 at corporate level has continued to develop and expand. Its mission continues to be to:

- Set the ambition level for the four sustainability strategic commitments
- Identify the levers to achieve this ambition
- Enable the business to deliver this ambition across the full value chain
- Engage employees on sustainability
- Provide clarity on ambition and progress to internal and external stakeholders

While the Sustainability & Environment team has a Company-wide role to provide direction and check regularly on advancements across all sustainability topics, for each of those topics (e.g. Health & Safety, Inclusion & Diversity, Human Rights, etc.), there are related functions, departments or "roadmaps" (multi-functional teams addressing cross functional sustainability topics) driving their continuous improvement. These teams are for the most part supported by dedicated policies which are referred to in the Company's Code of Conduct, a single reference intended to guide daily behaviour and help employees resolve the most common ethical and compliance issues that they may encounter. The Code of Conduct applies to all employees, officers and directors of the Company.

6.1.1.1 Airbus' way forward: Vigilance Plan

The Company is determined to conduct its business responsibly and with integrity. The Company is convinced that promoting responsible business conduct within its value chain is key to sustainable growth. For the Company's Vigilance Plan for its supply chain, see "– 6.1.6 Responsible Supply Chain", which shall be deemed to be incorporated by reference and form part of this plan.

As far as its own operations are concerned, the Company has adopted internal policies and management tools to perform the assessment, monitoring, mitigation and reporting of risk and compliance allegations, which are embedded into the Company's culture and processes.

Airbus SE / 2021 Board Report 73

Enterprise Risk Management & Internal Audit: With regard to risk management, sustainability risks and opportunities are fully embedded in the Company's Enterprise Risk Management ("ERM"). For further information on ERM, see "– Corporate Governance – 4.1.3 Enterprise Risk Management System". For further information on the Company's risks, see "– Risk Factors". Internal audits are also performed regularly across the Company, including on sustainability topics - see "– Corporate Governance – 4.1.4 Internal Audit. External audits are also performed in line with certification requirements as detailed in the related material topic sections.

Sustainability competencies & employee engagement: Awareness-raising, competence development and employee engagement are essential to preventing and mitigating sustainability risks and maximising opportunities. To this aim, the Company offers employees over 400 training opportunities, online and in-person, linked to environment, human rights, inclusion & diversity, data privacy, cybersecurity, product/aviation safety, health & safety and ethics & compliance. Training courses linked to sustainability topics were integrated into the 2021 mandatory training list for Company employees. Specific information on training is covered in the related material topic sections.

Affiliates: All Company-controlled affiliates are expected to deploy similar internal policies by applying the Company's directives. A Company-wide single directive defines rules, processes and procedures applicable to the Company's affiliates and their respective boards, directors and officers. Its enforcement is supported by the Directors' training programme which, in 2021, was delivered to around 267 people over 18 full-day digital sessions. The single directive assists the Company's affiliates in effectively fulfilling their responsibilities while assuring the Company's ongoing commitment to high standards of corporate governance. It was built on the basis of Company-related internal policies including but not limited to: the Company's Code of Conduct, International Framework Agreement; Agreement on the European Works Council; Supplier Code of Conduct; Health & Safety Policy; Environmental Policy; the Company's Anti-Corruption Policy and related Directives. An online self-assessment is completed on an annual basis by the controlled affiliates to self-assess their internal controls, including how they relate to the environment, health & safety, human resources, governance, finance, procurement and compliance requirements in order to identify any gaps and define remedial action plans as required. Controlled affiliates can update the self-assessment on a quarterly basis based on their progression. Since 2019, affiliates have also been asked to regularly evaluate risks via the Company's ERM system, as well as to regularly monitor them as part of their risk assessment process.

Grievance & whistleblowing mechanism: The Company is committed to maintaining a "speak-up" culture by promoting an open and trusting dialogue with employees at all levels. All employees are encouraged to express their views, defend their opinions, and point out unacceptable behaviour — especially behaviour that violates the Company's Code of Conduct. Employees can raise concerns to their line manager, their human resources business partner, to a Legal & Compliance representative, or through the Company's "OpenLine" hotline (www.airbusopenline.com). The OpenLine is anonymous where legally permissible and also available to external stakeholders, including affiliates and suppliers, and covers all sustainability topics. The Company endeavours to ensure that the procedures to assess, investigate and manage allegations are well aligned throughout the Company. For further information about the OpenLine, see "– 6.1.5 Exemplify Business Integrity".

For further information on the Company's approach to the reporting approach for human rights and diversity, see 6.1.4 and 6.1.3 respectively.

A dedicated section also appears at the end of this report compiling key information related to the vigilance plan. See " – 6.1.9 Deployment of Vigilance Plan (*Devoir de Vigilance*)".

6.1.1.2 Reporting standards

A GRI standard index (Core) as well as Task Force on Climate-related Financial Disclosures ("TCFD") and Sustainability Accounting Standards Board ("SASB") correspondence tables will be published in the Company's 2021 Universal Registration Document.

6.1.2 LEAD THE JOURNEY TOWARDS CLEAN AEROSPACE

I. Introduction

In line with the Company's purpose "**pioneering sustainable aerospace for a safe and united world**" and its aim to drive the transition of the air transport system towards climate neutrality, the Company's foremost ambition as an aircraft manufacturer is to bring the first zero exhaust CO₂ emission ("zero emission") commercial aircraft to the market by the

Airbus SE / 2021 Board Report 74

middle of the next decade and to play a leading role in the decarbonisation of the aviation sector. The Company is investing major resources into examining and reducing the impact of its products in operation together with all actors within the aviation sector.

As a supporter of the Task Force on Climate-related Financial Disclosures ("TCFD"), the Company not only tracks and measures the environmental impact of its sites, products and services, but also works in cooperation with its worldwide supply chain to drive more effective environmental management, decarbonise its industry and foster circularity by optimising resource utilisation. To help the Company reach its vision, it places innovation at the core of this effort by investing in research, new technologies and sustainable solutions. The Company approach to address climate risks and opportunities follows the four pillars of the TCFD - governance, strategy, risk management, metrics & targets - as reflected in the Company reporting hereafter, and in its answers to the CDP questionnaire published on its website. The Company maintained its A-CDP rating in 2021.

The Company has identified climate change as its most material environmental impact and as such recognises its role in contributing to mitigating the global footprint of the sector and the importance of aligning and respecting the commitments of the Paris Agreement. Climate change may also affect the environmental conditions in which the Company's manufacturing activities and products are operated. Another main area of attention is the elimination or management of regulated substances. The Company is continually seeking technically-feasible sustainable solutions to reduce the environmental impacts of its products and operations, in cooperation with its suppliers and industrial stakeholders. Other environmental aspects such as the impact on water resources, the production of waste or the emission of air pollutants are also part of the Company's priorities.

To this end, the Company has set key environmental ambitions:

- lead the decarbonisation of the aerospace sector aiming to bring the first zero emission commercial aircraft to market by 2035;
- reduce the industrial environmental footprint at sites worldwide and throughout our supply chain;
- develop a more circular model, leveraging ecodesign and digitalisation to optimise material utilisation and reduce use of critical resources;
- enhance the current product and services portfolio contributing positively to climate change mitigation and adaptation.

II. Governance

Environmental policy

The Airbus Environmental Policy is the top level referential defining the guiding principles, mission, vision and associated top level initiatives for environment. The policy applies Company-wide, including to affiliates where the Company owns more than one half of the voting rights or the right to appoint the majority of the board directors to the extent that the shareholders agreement and/or the level of control in force in each relevant affiliate allows it. It covers the Company's employees and contractors whilst on the Company's sites or at work under the responsibility of the Company. The policy takes a holistic approach to measuring and acting upon the Company's environmental performance by assessing the environmental impact of internal operations as well as providing capabilities to the Company's customers to reduce the impact of the products in operation. This also means introducing a lifecycle perspective and mitigating the risks and impacts at all stages of the lifecycle, from the procurement of raw materials, through the design and manufacturing of products, to their in-service life until their retirement.

Organisation and responsibilities

Two main management structures are relevant for the governance in sustainability matters and climate change: the Board of Directors and the Executive Committee.

As mentioned above, the Board of Directors is supported by the ECSC. In practical terms, the ECSC as a committee of the Board of Directors oversees strategic decision-making and the execution of the approved sustainability strategy, including areas such as innovation and environmental and climate action.

In 2021, the ECSC reviewed and provided guidance on a number of environmental topics such as the Company's decarbonisation strategy for its direct operations, supply chain and products.

To support the Executive Committee in environmental matters, especially climate-related, an Environment Executive Steering Committee ("EnC") was established in 2019. The EnC is composed of members of the Executive Committee and senior executives Company-wide, responsible for environmental topics. It meets monthly to review the progress and take decisions on all matters related to the environmental strategy. The EnC reviews climate change related topics, including the progress on greenhouse gas ("GHG") emissions reduction objectives, the decarbonisation strategy and climate related risks.

Environmental operations are led by the Sustainability & Environment department (described above), whose role is to guide the business in environmental matters and to set the policy and deploy, drive and improve the Environmental Management System ("EMS") throughout the Company.

The Company's EMS is based on ISO 14001:2015. Airbus was the first aircraft manufacturer to be ISO 14001 certified, and continues to show its commitment by having been recertified to ISO 14001: 2015 in November 2019, and confirmed by a certification surveillance audit in 2020 and 2021. The Company also monitors environmental regulatory developments to understand, evaluate and prepare for legal and regulatory evolutions applicable to its activities and products.

The Company's environmental strategy is implemented operationally by dedicated multi-functional teams at corporate and/or divisional level. These cover topics such as industrial and site impact, product operation, supply chain or chemical substances.

Disclosure of environmental indicators

The Company actively monitors its environmental data throughout the organisation in order to measure the environmental impact of its operations, track its performance and communicate information on environmental matters to internal and external stakeholders. Since 2010, environmental data published by the Company is verified by external auditors. This data is included in the ESG data board at the end of this section.

As part of its transparency policy, the Company provides climate change related data and information to the CDP annually, providing its investors and other interested parties with the insight they need. In 2021, the Company has maintained the A-score obtained in 2020.

III. Risk management

Environmental risk and opportunities are managed following the Company's ERM system. A specific Sustainability and Environment ERM plan integrates additional requirements defined within the ISO14001:2015 certified EMS and provides a transverse set of rules applicable Company-wide to ensure a consistent management of environmental risks and opportunities.

Relevant criteria for the evaluation of environmental risks and opportunities include: financial impact, impact on environmental performance, impact on EMS certification, as well as legal, supply chain and reputational aspects. Risks and opportunities are reported quarterly to the Executive Committee of each Division and top risks, including climate-related risks, are consolidated at Company level to be brought to the attention of the Board of Directors and reviewed semi-annually.

Climate-related risks

Climate-related risks (adaptation and mitigation) are described in "– Risk Factors – 4 Environment, Human Rights, Health & Safety Risks" and shall be deemed to be incorporated by reference and form part of the Non-Financial Information.

Airbus SE / 2021 Board Report 77

IV. Implementation / activities

1. Industrial operations

The Company has been working for many years on the reduction of its environmental footprint, not only its products and services but also its production and facilities. This started in 2006 with the Blue5 programme, supporting the 2020 Vision objectives for the reduction of the Company's industrial environmental footprint.

High5+ revised targets in line with a "1.5°C" pathway and neutralising residual emissions by 2030

In 2019, the Company continued with the 2030 vision and extended its programme in order to anticipate increasing environmental regulation, foster employees' engagement and provide answers to stakeholders' expectations for the coming decade.

Named "high5+", the programme is built on a set of ambitious reduction targets covering the five most material environmental impacts for the Company in order to reduce energy consumption, CO₂ emissions, water withdrawal, Volatile Organic Compounds (VOCs) emissions and waste production. These objectives have been set in absolute value, with 2015 levels as reference, as follows:

- **CO₂**: reduce direct (scope 1) and indirect (scope 2) net GHG emissions by -63% by 2030 compared to 2015. This target has been set by applying the relevant "Science Based Target Initiative" (SBTI) methodology for a near-term target in line with a "1.5°C" pathway. While the Company is working on a detailed pathway for a long term target in line with the SBTI Net-Zero standard, it has committed to neutralise the scopes 1 and 2 residual emissions from 2030 by using only carbon removals.
- **energy**: reduce energy consumption from stationary sources by 20% by 2030;
- **waste**: reducing the amount of waste produced by 20% by 2030 and divert 100% of the waste from landfilling and incineration without energy recovery;
- **air emissions**: 0% increase of s emissions by 2030;

Annual objectives and CEO / executives remuneration

In order to better embed this ambition into the Company's performance management, short-term targets are established consistently. The Executive Committee agreed in 2020 to include a reduction target for 2021 (compared to 2020) of -3% for CO₂ and -5% for purchased water (see table below) as part of the Company's top objectives.

In 2021, the Executive Committee agreed to include reduction targets of -5% for CO₂ for 2022 (compared to 2021) as part of the Company's top objectives.

As such, these annual targets form part of the CEO's and other Executive Committee members' remuneration, see "– Corporate Governance – 4.4 Remuneration Policy. In 2022, the CO₂ target will also be included as a non-financial KPI in the variable remuneration of executives.

For 2021, the CO₂ and water annual performance is described in the table below:

	Target	2020	2021	2021 v. 2020	Covered scope
CO ₂ e (ktons)	-3%	811	754	-7% (-6%retained ⁽¹⁾)	91%
Water (m ³)	-5%	2,101,229	1,791,662	-15%	69%

Data audited by EY®

Annual objective on CO₂. Geographical scope: In 2021: 48 sites. Scope of metrics: Scope 1 & 2 (including Oversize Transport) and excluding: refrigerant leakage, butane consumption, electricity on site from CHP, emissions due to processes. Scope 2 is location based with purchased guarantees of origin deducted. ⁽¹⁾net of guaranteed origins in excess of amount planned for target setting.

Annual objective on purchased water. Geographical scope: In 2021: 35 sites in Europe, China, USA and Canada, excluded: subsidiaries and Airbus Helicopters sites. Scope of metrics: Volume of purchased water. Scope: The TCO scope is reviewed annually. 2020 data were updated to reflect change in TCO scope accordingly.

GHG emissions and energy reduction

Stationary sources (e.g. heating, cooling, manufacturing processes etc.) account for c.70% of GHG emissions at the Company's sites and mobile sources (ground vehicles, "Beluga" air transport operations, flight test, etc.) for c.30%. Action plans for reducing emissions from stationary sources mainly rely on increasing energy efficiency and using low carbon energy sources, while plans for reducing mobile sources emissions include switching to lower emission vehicles where possible and avoiding emissions through better planning of flights and logistics and using lower carbon fuels (e.g. sustainable aviation fuels (SAF)).

In 2021, scope 1 and 2 GHG emissions have decreased by around 6% (7% on TCO scope), primarily due to oversize transportation efficiency and operation improvements, reduced flight tests activities and European emission factors improvement that more than offset production ramp-up impact.

Since 2019, SAF is used in the operation of the Company's Beluga transport aircraft for the purpose of internal logistics. In 2022, flight test activities will also start using SAF as part of the Company's revised GHG emissions reduction plan. The share of SAF used in these activities will progressively increase to 50% by 2030.

In the same timeframe, the share of renewable electricity used in industrial operations in Europe will also progressively increase, starting with an increase of 10% of guarantee of origin (GoO) certificates per year and the incorporation of long-term power purchase agreements (PPAs). The PPA project was launched in 2020 and achieved a major milestone in 2021 with the validation of the requirements to purchase renewable and low-carbon energy as well as the selection of suppliers to be finalised in 2022. This will allow the Company to accelerate its ambition to secure 100% renewable and low-carbon energy supply to all sites in Europe by 2024. The Company is investigating opportunities in other regions (eg. US, China) to follow the approach applied to Europe.

In addition, the Company uses an internal carbon price to support investment with positive energy and CO₂ reduction impacts on operations. In 2021, this price was updated from 30 €/tCO₂ to 150 €/tCO₂, giving a clear signal to project leaders on the importance of CO₂ footprint reduction and enabling a strong acceleration of project portfolio implementation.

Carbon offsetting and neutralising residual emissions

Carbon offsetting: in 2019, the Company introduced a mechanism to compensate emissions of activities for which reduction measures and use of renewable energy are not sufficient to meet the internal targets, such as air and sea activities, as well as emissions from air business travel. This mechanism follows an approach of first avoiding and reducing GHG emissions in absolute value to later compensate for residual emissions. The Company built a rigorous procurement process based on the concepts of additionality, real (permanent) reduction, prevention of double counting, prevention of overestimation and no additional harm. As a minimum, the carbon offsets need to be certified by the Gold Standard or Verra or Verified Carbon Standard or Climate, Community and Biodiversity Standards and the supplier needs to show proof of how each one of the mentioned criteria were met. In addition, understanding that these carbon offsetting programs may have gaps in their methodologies, additional proof was requested of how such gaps are managed by the provider. Moreover, societal aspects were considered, such as prevention of child labour, respect of human rights and the relation with the communities surrounding the projects. The volume of offsets required in 2021 is about 40ktCO₂e, procured through offset producer South Pole in the form of a cluster of compensation and removal projects: afforestation (VCS), landfill gas and waste gas (GS-VER), forest conservation (VCS-CCBS).

Neutralisation of residual emissions: as part of 2030 road map, the Company is developing a plan to neutralise residual emissions. The plan will follow as a minimum the SBTi "Net Zero" standard and the current scientific understanding in its definition of neutralisation by including only permanent removal and storage of carbon from the atmosphere.

Water management

The Company's water usage is mostly linked to sanitation and general uses (around 85%), while the rest is used in production related processes.

In 2021, the purchased water volume followed a similar trend as CO₂, decreasing by 15%. This reflects the increase in remote working (reduced presence on site), also resulting from the COVID-19 situation, as well as an increased water-efficiency and leak repair campaigns. Increased focus is put on the local level of water stress: in 2021, an analysis was conducted based on

Airbus SE / 2021 Board Report 79

the World Resource Institute's (WRI) Aqueduct Water Risk Atlas tool in order to understand where the Company's activities have the greatest impact on water resources. In 2022, the action plan will be adapted to reflect the priorities accordingly.

Air emissions

Air emissions, primarily referring to VOC emissions related to surface treatment, are mostly impacted by the number of deliveries. Substance substitution may also lead to the use of new chemicals with more VOC emissions which need to be monitored. Overall VOCs emitted are stable, reflecting the effort on product substitution even if production rate has increased compared to 2020.

Material consumption and waste management

The Company promotes the development of a circular economy model, and is proactive in seeking ways to recover, reuse and recycle materials beyond their initial life.

Not only does the Company send around 50% of its waste to be recycled, but already, through the TARMAC Aerosave joint venture, more than 90% of an aircraft's weight is recycled or reused through a selective dismantling (reverse manufacturing) process.

Regarding waste management, a multifunctional team is currently working in order to meet the high5+ ambition, gathering skills across the organisation such as engineering, information management, procurement, industrial operations and facility management.

The focus has been on standardising the existing practices towards waste collectors in order to take into account the involved regulatory framework and to enhance data monitoring and reporting needs. There are also strategic projects ongoing to clarify and enhance site monitoring strategy as well as on waste recycling.

Hazardous waste

In the Company's European operations, the main sources of hazardous waste are contaminated packaging and chemical waste, especially waste from surface treatment activities, oil, fuel and various chemicals. While chemical waste reduction remains a priority, this is a topic also driven by chemical regulations, the evolution of which may impact the reduction roadmap's ambition and timing (see Chemical Substances section below).

Biodiversity

When building a new site or extending an existing one, the Company engages with local partners on conservation and remediation projects to preserve flora and fauna where impacted by the Company's industrial activities.

Digitalisation

The Company leverages digitalisation as an enabler to optimise and reduce its environmental footprint. For example, some applications target to improve design, material utilisation or to optimise critical resources usage.

At the same time, the Company strives to minimise the direct increase in the environmental footprint as a consequence of digital technologies development.

Life cycle thinking and conscious design

The Company invests in Life Cycle Assessment (LCA) for environmental impact accounting associated with a specific product in accordance with the requirements specified in the standard ISO14040. Detailed LCA studies have been completed for the A220, A320neo and A350XWB product lines, covering over 95% of the Company's deliveries of commercial aircraft products in 2021. These studies are currently being verified by a third party auditor.

In addition, this holistic approach is used to provide a framework for projects to make environmentally conscious design choices to reduce projects footprint and optimise aspects such as product end-of-life management and critical raw materials usage. As an example, as part of its Ecodesign initiative, the Defence and Space Division used LCA for the development of the Sentinel satellites that are built for the European Space Agency (ESA).

Chemical substances

Many substances used in the global aerospace industry to achieve high levels of product quality and meet stringent technical performance, airworthiness and reliability requirements are subject to strict regulations.

Airbus SE / 2021 Board Report 80

In the aerospace industry, regulations on substances impact key processes and products, such as surface treatments, paints and fire protection.

The Company remains committed to moving towards replacement of such substances in products and processes. To help achieve this, the Company has put in place a portfolio of activities and projects, working with suppliers to identify, develop, qualify and deploy new technologies and solutions that avoid the use of substances classified as posing a risk to human health or the environment, whilst satisfying airworthiness, certification and performance requirements.

The Company also engages with suppliers to promote the adoption of a similar approach through regular communication and more widely, by working together with the aerospace industry to promote worldwide harmonisation of regulations and ways of working, taking into account the sector’s safety and lifecycle specificities.

Using information obtained from its suppliers, the Company tracks, registers, assesses and declares regulated substances. Since 2011, the Company has analysed the impact of over 1,100 substances and qualified and deployed substitutes for over 100 substances in 300 products.

Currently, the Company is actively working to substitute 65 substances in its own design, and an additional 45 in its supply chain, over the next five years.

The Company invests substantial time and resources in research and development for technologies that use alternatives to regulated substances. When it can be demonstrated that these technologies meet the strict safety and reliability criteria required for aviation, the Company seeks to implement them in its aircraft design and manufacturing. For example, the Company is, in cooperation with its suppliers, developing, qualifying and progressively deploying on all its new aircraft, new Chromate-free corrosion protection and paint systems for aluminium structures. Another example is the halon replacement project that researches alternatives to halon, a highly regulated ozone depleting substance, used for the fire extinguishing systems in engines and cargo areas.

Noise

Noise around the Company’s sites can also be an important topic for neighbouring communities. The Company is actively engaged with local authorities and the affected population to minimise its impact, by adapting operating times and actively seeking to reduce the noise at the source. In Toulouse, Airbus has launched the Median initiative regrouping actors in charge of flight activities around the airport to find the most effective solution to reduce noise levels.

Light pollution caused by Airbus activities has been deemed to be non-material to the Company’s value chain.

2. Product operations

According to ‘Our World in Data’, air transport as a whole represents approximately 2% of global human-induced GHG emissions, and around 12% of the transport sector emissions – see graph 1.

Graph 1: Global greenhouse gas emissions by sector – source: Our World in Data with data from Climate Watch, the World Resources Institute (2020)

The Company is committed to contributing to meeting the Paris Agreement targets and taking a leading role in the

decarbonisation of the aviation sector in cooperation with all stakeholders. The Company is convinced that aviation can achieve net zero CO₂ emissions by 2050. This is why the Company has the ambition to develop the world's first zero-emission commercial aircraft by 2035. In parallel, the Company is also developing a multifaceted climate-impact programme for commercial aircraft. This includes a focus on new aircraft technology development, sustainable aviation fuel (SAF), hydrogen, air traffic management (ATM) solutions and carbon removal solutions.

Aviation industry targets

The aviation sector's measures for reducing its environmental footprint started decades ago and significant achievements have been made. Since the 1990s, the sector has improved significantly the fuel and CO₂ efficiency of subsequent generations of aircraft, thereby reducing CO₂ emissions per revenue passenger kilometer by more than 50%.

In 2008, the aviation sector was the first to agree at sectoral level on ambitious CO₂ emission reduction goals through the Air Transport Action Group ("ATAG") by committing to an aspirational goal of reducing net emissions from aviation by 50% by 2050 compared to 2005 levels. In September 2021, ATAG updated its ambition and commitment with the 2021 edition of the "ATAG Waypoint 2050" report to reflect the industry's increased ambition to achieve net-zero carbon emissions by 2050 and contributing to the Paris Agreement goals.

Along with the revised ambition, ATAG provided several scenarios with ranges of improvement for each mitigation option (technology and design improvements, operational and ATM enhancements, SAF and hydrogen non drop-in solutions, and International Civil Aviation Organisation's ("ICAO") Carbon Offsetting and Reduction Scheme). In the most ambitious scenario, a reduction of up to 40% of CO₂ emissions can be achieved through technological developments, as illustrated by Graph 2 below.

Graph 2: The aviation industry's roadmap to net zero carbon emissions by 2050

Source: Airbus based on ATAG Waypoint 2050 report (2021) - Scenario 3: "aspirational and aggressive technology perspective"

In Europe, the EU Green Deal creates conditions and opportunities for the Company and the European aviation industry to speed up the transition: the Company shares the ambition to reach a net-zero carbon aviation ecosystem in Europe by 2050, and will contribute to the EU's "2030 Climate Target Plan". At international level, the Company actively supports and strongly encourages ICAO to introduce a global ambition by setting a meaningful long term aspirational goal to reduce CO₂ emissions from international civil aviation, whilst maintaining a global level playing field.

The Company's roadmap to reducing emissions

The Company believes that an approach which focuses on accelerating technological development, in complement to a dynamic deployment of SAF, should be pursued. This would form a strong basis for the development of hydrogen-powered aircraft and the associated infrastructure and minimise the recourse to offsetting to achieve the ambition.

The Company is investing in and focusing its efforts on five complementary strategic pathways to reduce its environmental footprint, in support of the overall sector ambition as highlighted above. In 2021, the total research and development spend of the Company amounted to € 2.7 billion.

Strategic pathway 1. Renew current fleets with best in class aircraft

The Company is continuously improving its products through new designs, advanced materials, upgraded systems and more fuel-efficient engines. Thanks to significant investments into new aircraft technology and designs, the Company's commercial aircraft products have reached a rolling average of 2.1% fuel efficiency improvement annually over the past ten years, exceeding targets set by the industry through ATAG – see graph 3.

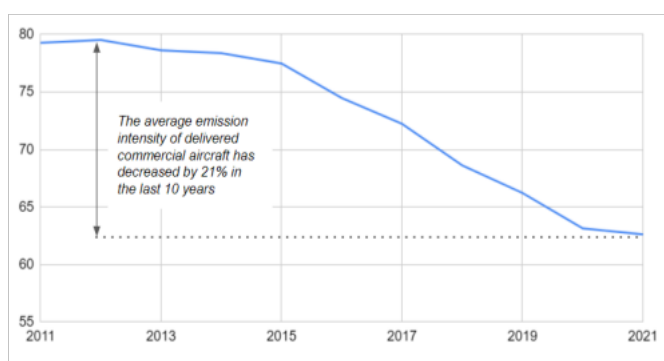

The Company's commercial aircraft portfolio includes the most efficient aircraft product line:

- A350 and A330neo offer 25% reduction in fuel burn and significantly reduced noise footprints versus the previous generation of aircraft;
- the A320neo family brings a 20% reduction in fuel burn, and nearly half the noise footprint compared to previous generation of aircraft;
- A220 offers 25% reduction in CO₂ emissions per seat versus previous generation of small single-aisle aircraft, 50%

reduction in noise footprint and 50% fewer NOx emissions than the standards.

Graph 3: Average intensity metric (gCO₂e/pax.km) of sold products

Airbus SE / 2021 Board Report 83

This continuous improvement is also reflected by the Company's contribution to Europe's CleanSky2 programme, with the use of new materials as well as the design and implementation of new aerostructures and technologies aiming to achieve CO₂, NOx and noise reductions. For this purpose a military aircraft C295 from the Company has been used as an in-flight technology demonstrator (flight test bed).

Strategic pathway #2. Investing in technologies enabling the Company to market zero-carbon vehicles

The Company is committed to contributing to developing, building and testing advanced technologies improving the aerodynamic and structural efficiencies combined with advanced propulsion systems– to enable the aviation industry to reduce CO₂ emissions of commercial aircraft, helicopters and future urban air mobility vehicles.

Zero-emission commercial aircraft ambition

The Company's work in electric flight has laid the groundwork for our future concept of zero-emission commercial aircraft. The Company believes hydrogen is one of the most promising technologies to reduce aviation's climate impact. If generated from decarbonised electricity through electrolysis, it generates little-to-no CO₂ emissions and would essentially allow aviation to be powered by decarbonised energy.

Aviation will be an end use application of hydrogen. The Company sees two primary uses for hydrogen:

- Hydrogen can be combusted through modified gas-turbine engines, or converted into electric power via fuel cells. The combination of both would create an efficient hybrid electric propulsion chain powered entirely by hydrogen.
- Hydrogen used to create eFuels (power-to-liquid or power-biomass-to-liquid synthetic fuels in combination with carbon from biomass or enhanced carbon sink sources).

On September 21, 2020, the Company revealed three different hydrogen-powered "ZEROe" concept aircraft. Those illustrate the research that the Company is investing in, with the objective to bring a zero emission commercial aircraft to market in 2035. From hydrogen propulsion to hydrogen-based synthetic SAF, from pod configuration to blended-wing aircraft, the Company is evaluating, maturing and validating radical technological breakthroughs which could be hosted on its zero-emission aircraft by 2035.

The Company is also investing in the required facilities to test these new technologies. Inaugurated in October 2019, the E-Aircraft System House ("EAS") is, with more than 3,000m², the largest test house dedicated exclusively to alternative propulsion systems and fuels in Europe. This means the Company can now test the latest electric motors and hybrid-electric engines directly on its own premises, and develop its own low-emission alternative propulsion units.

The Company goes beyond technology maturation by collaborating with the appropriate ecosystems. In 2019, the Company signed a Memorandum of Understanding with airlines such as SAS Scandinavian Airlines and easyJet to jointly research a zero-emission aircraft eco-system and its infrastructure requirements. The Company is also part of several major hydrogen alliances (such as the Hydrogen Council, Hydrogen Europe, European Clean Hydrogen Alliance etc.) and launched a joint-venture in 2020 with ElringKlinger in order to benefit from the huge cross-industry experience of other industries, and accelerate its ambition.

Airbus SE / 2021 Board Report 84

Zero-emission urban air mobility ambition

Since 2014, the Company has been exploring how recent technology advancements – from battery capacity and autonomy to electric propulsion – could help drive the development of new kinds of aerial vehicles with the potential for zero emissions when powered by renewable energies. In May 2018, the Company created the Urban Mobility entity to take its exploration into cutting-edge commercial urban air mobility solutions and services to the next level.

The idea for a compact “flying taxi” first came from the Company’s desire to take city commuting into the air in a sustainable way. Airbus has learned a lot from the test campaigns with two demonstrators: CityAirbus and Vahana. The CityAirbus NextGen revealed at the Airbus Summit in September 2021 combines aspects of both, with the new architecture striking a balance between hover and forward flight. The prototype is paving the way for first flight in 2023 and certification expected around 2025.

Beyond the vehicle, Airbus is working with partners, cities, and city inhabitants in order to create the ecosystem that is essential to enabling this new operating environment to emerge in a true service to society.

Strategic pathway #3. Investing in smart ATM solutions and optimised operations

Improving the efficiency of air transport operations and infrastructure could contribute to emission reductions by around 10%. The Company therefore supports initiatives aimed at reducing ATM inefficiencies (such as the Single European Sky Air Traffic Management Research programme – SESAR), while working on disruptive practices, such as formation flying.

Through its subsidiary Navblue, the Company provides services helping its customers to minimise fuel consumption with best operational practices, innovative services and training. The Company also focuses on developing fuel saving procedures for airports and ground operations to minimise the use of engine power and auxiliary power units (APU) while the aircraft is on the ground.

In November 2019, the Company launched the fello’fly project which aims to demonstrate the technical, operational and commercial viability of two aircraft flying together for long-haul flights. Through fello’fly, a follower aircraft will retrieve the energy lost by the wake of a leader aircraft, by flying in the smooth updraft of air it creates. This provides lift to the follower aircraft allowing it to decrease engine thrust and therefore reduce fuel consumption in the range of 5-10% per trip. By end 2020, the Company’s fello’fly had signed agreements with two airline customers; Frenchbee and SAS Scandinavian Airlines, as well as three Air Navigation Service Providers (ANSP) to demonstrate its operational feasibility; France’s DSNA (Direction des Services de la Navigation Aérienne), the UK’s NATS (National Air Traffic Services) and European Eurocontrol. In November 2021, two A350 test aircraft conducted the first-ever transatlantic fello’fly flight, confirming the potential for fuel savings of more than 5% during long-haul flights.

Strategic pathway #4. Developing and deploying SAF, with all aircraft types 100% SAF compatible before 2030.

Energy source is the main driver in the CO₂ emissions and CO₂ intensity of products coming from the Company’s commercial aircraft activity. Although they only represent a small share of aviation’s current fuel use, SAF (biomass-based or synthetic) are key in the air transport sector decarbonisation strategy.

Since 2008, the Company has acted as an important catalyst in the certification process, demonstration flights, partnerships and policy advocacy of sustainable jet fuel. Since 2011, over 360,000 commercial flights have used SAF and more than 1 million flights with SAF are expected by 2025 (source: IATA, flynetzero, 2021).

All the Company’s commercial aircraft are already certified to fly with a fuel blend of up to 50% SAF. SAF produced by using most advanced pathways can provide CO₂ emission reductions of up to 80% throughout their life cycle. This means that already today the emissions from aircraft currently offered by the Company could be reduced by ~40% if their full blending capability was used. The Company’s ambition is for its commercial aircraft to be capable of being operated with 100% SAF before the end of the decade (third scenario on the chart below, “Full aircraft potential”).

As detailed above (see “Aviation industry targets”), the Company supports decarbonisation scenarios which include an ambitious rollout of SAF using all possible pathways (HEFA, Alcohol to Jet, Fischer Tropsch, Power to Liquid, etc.). Under such scenarios, the Company estimates that products delivered in 2021 could see their life-time emissions reduced by around 17%, thanks to the gradual introduction of SAF during their operational life (second scenario on the chart below, “Anticipated SAF rollout”).

The Company is involved in two main research projects: VOLCAN and ECLIF3, conducted in partnership with important actors of the industry. Both aim at assessing the impact of 100% SAF on engine and fuel systems whilst measuring the positive impact on aircraft’s emission and fuel efficiency. First test flights took place in 2021 and the final outcomes will be publicly published by the project partners once available. Both projects will pave the way for going beyond current maximum

Airbus SE / 2021 Board Report 85

blending levels for SAF (currently 50%). It will allow the Company to collect information and enable further research activities and technical work in order to reach the goal of gaining 100% SAF certification for commercial flights.

However, today the price and global production capacity remain the main constraints for operators, preventing large-scale incorporation of these types of fuels. The rapid scale-up of SAF plays a major role in aviation’s decarbonisation scenarios, decreasing emissions of the Company’s products in use. As of 2021, 36 countries have implemented SAF policies to support industry’s ambition, according to IATA. The Company supports policies that would incentivise their production and usage at affordable costs and is engaged in many initiatives and partnerships promoting the development of SAF production and use (World Economic Forum Clean Sky for Tomorrow Coalition and First Movers Coalition as examples).

Strategic pathway #5. Encouraging temporary CO₂ emission compensation schemes

Finally, CO₂ emission compensation will be instrumental to stabilising aviation emissions in the medium term until disruptive solutions reach market maturity. For that reason, the Company supports ICAO’s CORSIA as the only global market-based

measure for international civil aviation.

Reporting of emissions from value chain

Scope 3 Use of sold products

The main contribution of the Company’s value chain on climate change comes from the use of sold products, especially related to its commercial aircraft activities.

In order to provide the level of transparency expected by stakeholders and following recommendations from the TCFD, the Company reports in-use emissions of the products it delivers (Scope 3 – Use of sold products). This started in 2020 with the disclosure of emissions from commercial aircraft products, and was extended to civil helicopters in 2021. The Company will continue to progressively extend the scope of reporting to other families of products, for which the calculation methodologies are still under development. Nevertheless, current results and advanced estimations have shown that the vast majority (over 90%) of the Scope 3 - Use of Sold Product impact of the Company’s products is due to the commercial aircraft family of products, and that this situation is unlikely to change once all the product families will have been assessed.

Commercial aircraft products

In 2021, the Company delivered 611 commercial aircraft. Based on an average life-time in service of around 22 years (average life-times specific to each aircraft type were used in the calculation), the total CO₂ emissions for these products over their anticipated life-time is estimated at around 460MtCO₂e (of which around 80Mt are linked to upstream fuel production), which translates to an average efficiency of 62.6gCO₂e per passenger-kilometre. In 2020, the Company delivered 566 aircraft with resulting estimated life-time emissions of around 440MtCO₂e (of which 80Mt are linked to upstream fuel production) and average efficiency of 63.1gCO₂e per passenger-kilometre.

Fig. Scope 3 emissions reduction levels in potential SAF scenarios, in Mt CO₂e

For the purpose of this calculation, the operating conditions of the aircraft were considered to be static over the whole service life. Therefore, the numbers above do not reflect the anticipated gradual introduction of decarbonisation measures such as SAF, and as a result constitute a “worst case scenario” in terms of carbon intensity. As such they represent an unmitigated scenario that can only serve as a general basis to assess carbon emissions efficiency improvements over time. In order to better understand the potential impact of SAF on scope 3 emissions, this chart shows three scenarios comparing the current SAF usage, an ambitious deployment scenario as envisaged by ATAG and the maximum reduction potential as allowed by the current 50% blend limit.

The Company calls for a sectoral alignment on these methodological aspects through the relevant international bodies, in order to provide consistency in the way such impacts are calculated and communicated throughout the air transport sector.

Civil helicopters

In 2021, for 192 civil helicopters delivered, the Company estimated a scope 3 “use of sold product” impact around 1.13 MtCO₂e, of which around 0.20 MtCO₂e are linked to upstream fuel production. In 2020, for 201 civil helicopters delivered, the resulting scope 3 “use of sold product” impact was around 1.09 MtCO₂e, of which around 0.19 MtCO₂e are linked to upstream fuel production. In 2021, the internal forecast of flying hours used for the calculation was updated, resulting in a slight increase in emissions despite the lower number of deliveries compared to 2020.

Methodology
<ul style="list-style-type: none"> - The Company’s emission calculation methodology was developed by a team consisting of key personnel from the engineering and environment departments and is aligned with the guidance provided by the Greenhouse Gas Protocol. The external auditor performed a review of the calculation methodology applied by Airbus and assessed the reasonableness of the supporting assumptions. - The Company has used a number of assumptions based on internal and external information including assumptions based on publicly-available data. <ul style="list-style-type: none"> o For commercial aircraft these assumptions include the aircraft load factor, the current penetration rate of sustainable aviation fuels, their CO₂ reduction potential and the indirect emissions index from jet fuel production, emission factors, as well as aircraft operational usage and average in-service lifetime. Primary data collected within the Company was also used, such as the type of sustainable aviation fuel considered or aircraft performance and configuration parameters. o For civil helicopters, these assumptions include feedback from the market in terms of helicopters operations such as flight hours per year and region where the helicopter is operated. Direct and indirect emissions are included over the product’s entire service life. Emission factors are consistent with those used in the commercial aircraft methodology. Sustainable Aviation Fuel impact is not considered - Civil helicopters considered for Scope 3 calculations correspond to helicopters produced during the year having reached the ‘available for flight’ status.
Key hypothesis
<ul style="list-style-type: none"> - The estimation includes CO₂ emissions. Emissions related to CH₄ and N₂O were excluded given the very low levels produced by modern aircraft engines. Emissions related to NO_x were estimated and excluded given the uncertainty related to the NO_x emission factors and the relatively low contribution of this emission stream.

- Emissions related to commercial aircraft engine start and taxing have been included, however, emissions from the auxiliary power units (APU) and ground handling equipment have been excluded.
- For helicopters, the flight hours model is directly derived from in-service helicopters.

Scope 3 Purchased goods and services

In 2021 for the first time, the Company has published an estimate of the GHG emissions arising from the goods and services it purchases (Scope 3 - Purchased goods and service based on its 2020 spent). The Company estimates that the 2020 emissions of purchased goods and services were around 11.3MtCO₂e.

Methodology
This evaluation was performed using a dedicated tool developed by the International Aerospace Environmental Group (IAEG) offering a choice between two approaches: a “spend based” approach, allocating emissions to each amount spent in specific commodities and a “mass based” approach, allocating emissions to quantities of materials purchased. For this first

Airbus SE / 2021 Board Report 87

evaluation, the Company has used the “spend based” approach. While this method embeds a certain degree of uncertainty, considered high by the IAEG on a certain number of emissions factors used in the methodology, it provides a relevant view of the sources of GHG emissions in the Company’s supply chain and enables comparison of the various Company’s scopes throughout its value chain. The calculation will be refined in future years as better quality data becomes available.

Sustainable space products

Beyond commercial aviation, the Company’s Defence and Space Division delivers satellites and intelligence that informs decision making on significant environmental issues. Its aerial imagery of climatic and environmental changes around the planet reveals the scale of change and dependencies at work.

The Company is working to ensure a sustainable space environment to prevent space debris and protect valuable national assets, such as satellites, that are in orbit around the globe.

The Company through its Defence and Space Division is the first company to test technologies which clear out space junk and avoid spacecraft collisions. Three main debris-removal technologies have been tested in orbit: harpoon, net and vision-based navigation. As space law evolves, the Company is committed to ensuring its products meet these new regulations (such as the French Space Operations Law requiring to avoid satellite collisions and ensure the safe removal of spacecraft from useful orbit at the end of life) as it believes in the importance of promoting sustainable space.

6.1.3 BUILD OUR BUSINESS ON THE FOUNDATION OF SAFETY AND QUALITY

A. Aviation and product safety

I. Introduction

The Company believes that everyone in the aerospace industry has a role to play to further enhance the safety of the air transport system. Flying today is safer than ever before, and collective efforts continue to ensure that it will be even safer by anticipating and responding to risks, threats and challenges. Whilst the foundations of the air transport system are built on regulatory compliance, the safety culture at the Company goes beyond compliance with certification and continued airworthiness requirements to also focus on safety enhancement activities in products and services. This also extends to the products and services of the Company’s Defence and Space Division that offer communication, collaboration and intelligence knowledge solutions to assist government authorities, emergency service providers and healthcare providers.

Additional resources: [Code of Conduct](#), [Product Safety on Airbus.com](#), [Safety in Operations on Airbus.com](#), [Safety investigation on Airbus.com](#), [Health Onboard](#), [Accident Statistics website](#)

II. Governance

A dedicated safety organisation within the Company acts as an independent voice of safety. The Chief Product Safety Officer for the commercial aircraft activities of the Company reports directly to the CEO and is the Chairman of the Product Safety Board (PSB). Several Executive Committee members and senior executives are part of the PSB. This ensures proactive safety decision-making is based on multidisciplinary assessments at the highest decision level of the Company. The PSB makes decisions regarding technical aspects, safety governance and strategy. Regular reviews with the Board of Directors are also performed.

Airbus Safety Management System

Consistent with ICAO Annex 19, the Company's Corporate Safety Management System ("SMS") is based on the four ICAO pillars: safety policy and objectives, safety risk management, safety assurance, and safety promotion. The Company's Corporate SMS principles also integrate the end-to-end approach to safety with the Company's suppliers and operators. This is facilitated by an appointed Corporate SMS Officer and SMS Officers per function with support from a network of nominated SMS Representatives throughout the Company.

During 2020-21, Airbus Defence and Space evolved its Product SMS by adapting governance principles from established Airbus Commercial and Military Airsystems SMS to all of its programme lines, including cybersecurity systems, land communications, surveillance systems, drones and more. Programme Line Safety Boards and a shared online reporting tool have been established. Implementation is ongoing.

Airbus safety strategy

To support the Airbus vision for safety - "we constantly strive to enhance safety together in our quest to reach zero accidents." - the Company's product safety strategy is to:

- implement programs to continuously enhance the safety culture to ensure each employee has a personal and collective engagement consistent with the Airbus safety values;
- provide means so that any employee can report safety concerns;
- ensure product safety is a priority in decision making, and
- share lessons learned and best practices with internal and external stakeholders, and take action as appropriate also based on identified top safety threats or opportunities.

Regulatory compliance

Product certifications are provided by the competent aviation authorities including the main civil aviation authorities and specific military authorities. Within each Division, and according to their respective functions, the Company works to ensure compliance through design and certification of products under EASA Part 21 Design Organisation Approvals (DOA); ECSS-Q

ATOC (Air Operator Certificate) and Defenders (DEF) (for Defense Reg EASA); manufacturing under Production Organisation Organisations (CAMO); aircraft maintenance and retrofit operations conducted in line with civil and military EASA Part 145 regulations; and training provided to flight crews, cabin crews and maintenance crews through EASA Part 147 Approved Training Organisations (ATO).

The certified organisations within the Company where specific approvals are granted by the aviation authorities, are audited and monitored by these authorities to ensure compliance with regulatory requirements. Additional audits are conducted by third parties as part of the quality certifications appropriate to each Division, including EN9100, EN9001, EN9110, AQAP 2110, AQAP 2210 and AQAP 2310.

Commitment to “just and fair” culture

This commitment ensures that the appropriate reporting channels are available and known to all employees to report product safety and quality related matters in an atmosphere of trust and empowerment. It is documented and endorsed with the signatures of the CEO, Executive Committee members and top management.

III. Risk management

Applying proactive risk management principles has contributed to significant improvements for the safety of flight in recent decades. This risk management approach drives the Company’s Corporate Safety Process, which has been in place for more than 15 years. It supports the principles of the Company’s safety enhancement culture, going beyond compliance with certification and airworthiness duties.

IV. Implementation / activities

Consistent with its end-to-end approach and as part of its safety strategy, the Company has several collaborative initiatives that contribute to reinforcing resilience capabilities in the air transport system and enhancing the safety level of its products with all key actors.

For example, the Company is working with its supply chain to extend its safety enhancement principles with its suppliers. This includes specific SMS forums and initiatives with its suppliers, which reinforce the collaborative approach for optimising responses to in-service feedback and reports.

D10X (short for Air Transport Safety, Destination 10X Together) is another collaborative initiative with airlines. The aim of D10X is to propose pragmatic solutions, together with operators of Airbus aircraft, for the key safety issues identified within this network.

Sharing safety information is a key contributor to increasing the level of safety. There have been 25 flight safety conferences with the Company’s customers since the first was held in 1994. Another means of sharing information is through “Safety first”, the Company’s safety magazine contributing to the enhancement of safety for aircraft operations by increasing knowledge and communication on safety related topics. It reaches over 1,000 aviation professionals daily via the website safetyfirst.airbus.com and the Safety first app.

In addition to these external safety promotion initiatives, the Company invests in internal safety promotion with the objective to continuously reinforce the safety culture of all employees. This is supported by different means including communication campaigns, training, safety awareness sessions, and development of a Safety Promotion Centre. SMS officers are nominated and trained in all key business functions to ensure implementation and operation of the SMS within the Company, including safety promotion. As of 31 December 2021, all SMS officers have been nominated and trained. The above-mentioned commitment to a just and fair reporting culture is another example of an initiative that promotes the Company’s safety culture. These elements are integrated in the Company’s SMS action plan.

Airbus also continues to innovate to benefit from technological evolutions to further enhance both operations and safety.

All of these initiatives lead to continuous improvement of the safety record. This is illustrated in statistics (below) showing that the latest fourth-generation jets are the safest. All Airbus Fly-By-Wire family aircraft (including A320, A330/A340, A380, A350, A220 fleets) are the latest fourth-generation aircraft.

B. Cyber security

I. Introduction

Cyber security risks have the potential to impact all business operations, employees, plus products and services if incorrectly managed - either in confidentiality, availability or integrity. As such, the company undertakes a continual process of cyber security risk identification and remediation, supplemented with significant cyber security capabilities for the prevention, detection and response to cyber threats and events.

Cyber security risk management is a core element of modern organisations, thus the Company has developed state of the art cyber capabilities for the defence, detection and response to emerging cyber threats. The cyber security paradigm adopts a compliance, regulatory and risk-based approach embedded across four asset bodies: IM, industrial, products & services, and people & workplace.

Developing cyber security as a function of the business, with the relevant capabilities and stakeholders, ensures an evolutionary approach for continued protection against emerging threats and to support the business in securely enabling its digital transformation.

Airbus SE / 2021 Board Report 91

II. Governance

The Company has undertaken a cyber security transformation since 2019 with the establishment of a federated model to digital security encompassing accountable leaders in respective organisational structures such as IT, engineering and operations. A dedicated team for security governance was established, reporting to the company Chief Security Officer (CSO), responsible for the definition and audit of cyber security directives and methods aligned to major industry standards such as ISO27001 or IEC62443. The company Chief Information Security Officer reports to the CSO with a direct reporting line to Airbus CEO. Such an approach ensures localised accountability and reactivity to cyber risks with centralised governance, reporting, technical standards, and processes. Cyber security governance scope encompasses all Divisions and global operations plus affiliates.

Corporate Security Council

The Company has established a Corporate Security Council, chaired by the Chief Security Officer, for the coordination of security governance and to ensure consolidated security risk reporting from each of the four asset clusters; IT, industrial, product & services, and people & workplace.

Security governance directives

Security directives are published and audited to ensure the company business, including affiliates and subsidiary companies, follows the same standards for data protection and systems security. Key cyber security directives include:

- A08 - Company Security Policy
- A1044 - Security Requirements for Company Information & Data Classification and Protection
- A1058 - Security Requirements for Information Systems Management

- A1064 - Security Requirements for Industrial Automation and Control Systems
- A1666 - Requirements for Product Security
- A1015.0 - Requirements on Information Security for Suppliers
- A1015.1 - Specific Requirements on Information Security for IT Service Providers

III. Risk management

Confidentiality, integrity and availability are well-known to define cybersecurity objectives when thinking about systems risks. Corporate Security owns the accountability of security risk management and is in charge of defining cyber security risks

Airbus SE / 2021 Board Report 92

taxonomy and managing the lifecycle in ERM, including strategy, organisation, roadmap and initiatives at Company-wide level.

In terms of cyber security, risk management is the aggregation of continual risk reporting, cyber security validation processes embedded within security by design principles for projects, applications and infrastructures – in addition to the implementation of digital security controls aligned to the Airbus enterprise security architecture standards.

Risk mitigation measures follow the principle of people, process, and technology controls to reduce likelihood and/or impact from cyber incidents. The Company incorporates mandatory cyber security training and awareness for all employees with additional engagements for employees in higher risk categories or where additional regulatory stipulations apply. Security processes are fixed through security governance directives, business management processes (e.g. MC.AS.01 Vulnerability Management), and operating models. Technical security controls are implemented and measured in accordance with ISO27001 and other industry standard information security management standards.

The Company implements a number of key technical security controls in the reduction of cyber incident likelihood including the rollout of endpoint protection and data loss prevention tools, the implementation of multi-factor authentication, plus the adoption of enterprise security architecture approaches. To reduce impact from cyber events Airbus operates in-house security operations centers, covering both commercial and national activities; plus a Computer Emergency Response (CERT) team analysing cyber security threat intelligence and activating to rapidly investigate and contain cyber security incidents. Cyber security risk management is under regular internal and external audit, confirming processes and implementation to both Airbus and Industry standards. Technical audits are also conducted regularly on applications, systems and infrastructures in the form of cyber security penetration testing.

IV. Implementation / activities

During the course of 2021, a number of key initiatives have been undertaken to improve the cyber security position, reduce associated risks and decrease the likelihood of successful cyber attacks, including:

- 100% coverage of core Divisional Company-issued laptops deployed with Endpoint Detection & Response (EDR) tools
- 100% of employees now able to access Google client side encryption tools for encryption of the company data in Google suite
- 35 of 35 high risk supplier connections now successfully migrated to the new standard secured supplier architecture
- Restricted CERT extension devised to ensure cyber incident response coverage across both commercial and national infrastructures

Such activities have successfully reduced the Company's overall cyber security risk picture, and specifically related to the increasing threat from ransomware.

V. Outlook

There are no signs globally that the threats of cyber attack will dissipate or slow; therefore it is critical that the Company maintains ongoing improvement and response activities in order to reduce associated risks. A number of key initiatives are central to this including:

- Ransomware resilience: as one of the major risks, efforts continue with major investments into ransomware prevention in order to reduce both the likelihood of an incident, but also to significantly increase the resilience and reduce the time to recover critical applications and systems;
- International localisation: extending the federated model of security to encompass international localisation of affiliates with enhanced risk reporting;
- Secure digital transformation: enable digital transformation via the design development and deployment of updated security standards for cloud security, application hardening and zero trust networking;
- Security Operations Centre (SOC) 2025 strategy: detecting and rapid response to cyber incidents is a key part of any security practice: thus Airbus will maintain and continue to scale the SOC activities to the needs of the business.

C. Health and safety

I. Introduction

Airbus SE / 2021 Board Report 93

The Company considers health and safety as a top priority that is non-negotiable. Our goal is to enable an environment that's safe and healthy for all. Risk prevention and the promotion of safer and healthier conditions in the workplace are key to enable us to improve the health and well-being of our employees and anyone else who works inside Airbus. By focusing our attention on this, it also helps to improve the nature of the task, working conditions, competitiveness, quality, engagement and sustainability.

Additional resources: [People Safety on Airbus.com](#); [Code of Conduct - incl. Health and Safety commitment](#)

II. Governance

The Airbus Occupational Health and Safety Policy is a group-wide foundation for the management of health and safety within the workplace. The Policy applies to the Company's commercial aircraft activities, to the Airbus Helicopters and Airbus Defence and Space Divisions, and also to the Company's affiliates.

In 2021, an Airbus Occupational Health and Policy Statement was signed by Guillaume Faury, Airbus CEO, to enhance and reinforce the Policy principles.

The health and safety organisation is part of the Human Resources and Workplace Department under the ultimate responsibility of the Company's Chief Human Resources Officer.

The organisation is called Environment, Health and Safety (EHS). The Head of EHS reports to the Chief Human Resources Officer, and is supported by local EHS business partners. There are also regional EHS business partners in China, North America and APAC. Cross-organisation expertise, support and coordination is provided by centres of expertise, including safety, industrial hygiene, ergonomics and operational environment and occupational health and wellbeing. The EHS organisation is responsible for the health and safety management system and for the operational application of the corporate environment and sustainability management system in the entities.

Approximately one third of the Company's core entities in home countries are now certified to the ISO45001 Standard for health and safety management systems or have a similar certification. Company wide, this means that nearly 25% of employees work on sites where the health and safety management system is certified to ISO45001. Other sites have formal management systems that are not yet formally certified, but operate to the standards required by our health and management systems.

III. Risk management

The role of the Airbus' health and safety organisation is to anticipate, identify, evaluate and prevent or mitigate risks to safety, health and well-being, and the business, arising as a consequence of the Company's work activities.

Airbus SE / 2021 Board Report 94

Health and safety requirements have been defined in a directive that applies company-wide, including to the Company's affiliates. The Company's affiliates report on their health and safety management status through the Internal Controls Self Assessment (ICSA) exercise.

Occupational health and safety risks are managed using the framework provided in the Company Methods for 'Health and Safety Risk Management' and 'Incident Management'. Those risks that are considered to have a high potential impact, including in Airbus affiliates, are monitored by the Company's Enterprise Risk Management (ERM) system.

In 2021, the Company-wide method for risk assessment and control was updated. This method consists of a sequence of logical steps to identify significant hazards, evaluate the risks and prevent, eliminate or mitigate them, following the hierarchy of control principles: elimination, substitution, engineering control, administrative controls and, as a final measure, personal protective equipment.

The method for reporting and managing incidents and near misses has also been refreshed. It harmonises incident reporting between countries, taking into account applicable local regulations. The investigation and root cause analysis process described in this method supports the identification of risks and related mitigation actions.

The principle health and safety concerns in 2021 consisted of the following topic areas:

- COVID-19 and the necessary adaptation of work activities.

- Working environment including for example work at height, slip, trip and fall risks; site roads and infrastructure.
 - Machinery and equipment, such as hand held powered tools, cranes and jigs.
 - Physical agents, including noise, vibration and electricity.
 - Substances and materials, such as those addressed in REACH regulation.
- Psychological risk, including from the impact of COVID-19 confinement and the related Company adaptations.
 - In-situ contractors, including competence, interfaces and site transport.

The impact of the ongoing COVID-19 pandemic is a continuing challenge. However, the main causes of occupational injury in 2021 were once again related to slip, trip and fall accidents, ergonomic incidents, and the use of hand tools and equipment. These represented the majority of injuries recorded on the FISH (Federated Information for Environment, Safety and Health), global environment, health and safety platform. In fact, slip, trip, and fall accidents resulted in 25% of the lost time injuries included in the lost time injury frequency rate.

Employees and others on Airbus sites can raise health and safety concerns in a variety of ways. Employees can raise a near miss or incident declaration in FISH using a computer or mobile device. Line managers can share warnings and good practices using a red, amber, green flash alert process. A 'go-look-see' process helps managers to identify risks and related mitigation actions. To support the promotion of a "speak-up" culture, the Company has the OpenLine to provide employees and third parties with an avenue for raising concerns.

IV. Implementation / activities

The overall incident management harmonisation process is enabling improvements in data collection, analysis and the production of reports. This supports the Company-wide key performance indicators.

Airbus and its Divisions rolling 12 months employee lost time injury frequency rate

Airbus SE / 2021 Board Report 95

The rolling year of the lost time injury frequency rate end of year figure amounts to 3.21 Company-wide and to 4.31 in Airbus, excluding the Divisions. Company-wide Airbus experienced a more than 15% improvement in frequency rate. It has been positively impacted in 2021 as a result of the various safety activities and actions taken linked to the pandemic. Frequency rate figures are reviewed monthly by the CEO and the Executive Committee and the data shared with all executives and senior managers in a monthly webinar.

The FISH incident management module already covered all main sites in Airbus and its Divisions in France, Germany and Spain, and in the UK the Airbus commercial aircraft and the Airbus Defence and Space Division sites. It also covered the Airbus commercial aircraft plants in Mobile, US and in Tianjin, China. This year the FISH incident management module has been extended to cover the Airbus Defence and Space Division in Poland. Around 80% of the Company employees including the active workforce, the apprentices and the temporary employees are estimated to be covered under the FISH platform. The FISH perimeter continues to be progressively extended.

The work on incident management has reinforced the reporting of near misses. This has led to a total of 19,305 near misses being declared on FISH in the Airbus commercial aircraft activities. The investigation of near misses identifies cause agents and mitigation actions that support incident prevention measures.

Activity to mitigate risks is promoted and deployed through different channels. Most importantly, the Company stimulates behavioural change, in particular through its "People Safety @ Work" (PS@W) project in Airbus commercial aircraft, the "We Care initiative" in Airbus Defence and Space Division and the "Safe Together" initiative in Airbus Helicopters Division. This embeds a culture of continual improvement in workplace health and safety performance. Examples of particular campaigns include:

- 'Team Talk' packages enable managers to discuss safety with their teams.
- Videos illustrating our safety golden rules.
- Campaigns to support a safe return to work after a long break such as summer holidays.
- Site Safety Awards to motivate and engage employees.
- Mindset and behaviour workshops.
- Safety weeks and safety mobilisation days, often topic specific and led by senior managers.
- 'Safety Box' (safety activities) and 'Safety Lab' (safety discussions) sessions, in both face to face and virtual meeting modes due to COVID-19.
- Testimonies by employees who have suffered accidents at work.
- Transparent sharing of safety related information, such as frequency rates and 'Flash Alerts'.
- Mandatory EHS training.

The Company 'Safety Ambassadors' knowledge, competences and roles have been reinforced. This network comprises around 1,900 members, and is a significant enabler for culture change. They spread best practices and support activities such as the implementation of COVID-19 measures.

At the operational level, the Airbus commercial aircraft operating system (AOS) includes an assessment grid to evaluate the environment, health and safety maturity level in operational areas. This reinforces the activity to reduce risk, driving the implementation of initiatives such as the PS@W trip hazards removal, mobile steps safety and site traffic infrastructure improvements.

In 2021, the virtual classroom portfolio was further developed, in particular to cover some of the elements of statutory training such as First Aid, and we will continue to develop more digital enabled learning solutions. Consequently, despite the challenging environment of the ongoing pandemic, over 128,795 hours of dedicated health and safety training were delivered to 28,144 individual employees between October 2020 and September 2021.

Managers at all levels are required to attend the 'Airbus Environment and Health & Safety (EHS) Leadership Certificate'. This intensive course has four modules, which, if completed within a certain timescale, lead to an externally validated 'Environment, Health and Safety Certificate'. The EHS Leadership modules 1 and 2 were therefore prioritised for the virtual classroom format in 2021. The development of modules 3 and 4 will take place in 2022. A total of around 2,300 employees have now attended these modules since 2019; 1,309 of which in between October 2020 and September 2021.

The 'Executive Environment and Health & Safety Masterclass' ensures that the Company top leaders are equipped to drive the strategy of continual improvement in health and safety culture and performance. Overall some 451 executives and senior leaders have completed the Masterclass from October 2020 to September 2021. In the same period some 82 executives, mainly from the plant and final assembly lines, have attended the practical and hands-on 'Back to the Floor' training, which enables leaders to proactively and positively engage on safety issues on the shop floor.

Occupational health and wellbeing are key priorities for the Company, as evidenced by the construction of purpose-designed occupational health facilities at Broughton, UK, and at Getafe, Spain, which were completed in 2021.

Airbus SE / 2021 Board Report 96

Naturally COVID-19 has continued to be a critical risk to people and the Company. Mitigation activities have included:

- Providing and maintaining guidance on the core barrier measures, supported by awareness campaigns and material including posters, videos and e-learning modules.
- Supporting national vaccination programmes, where possible. Around 19,500 people were vaccinated on Airbus sites in France, Germany, Spain, UK, the USA and China.
- More than 17,900 COVID-19 tests have been performed on employees in Germany and France, with particular hygiene and testing procedures for delivery teams.
- An employee 'COVID-19 Hotline' and case management has been provided by Occupational Health teams.

Whilst certain health initiatives and check-ups were impacted by the COVID-19 situation, key monitoring campaigns were maintained. Psychological health continues to be a focus. In addition to the employee helpline services and the availability of psychologists, training was provided for topics such as mental health awareness and addiction prevention. Support material has also been made available on the Company intranet pages.

With regard to substances, the "REACH-IT" project has continued in Airbus' commercial aircraft business, together with similar initiatives deployed in the Divisions. Manufacturing processes, tools and workstations have been reviewed in light of the REACH authorisation measures for the protection of health, safety and the environment. Now there is a progressive transfer of this work into operational management systems, to ensure the ongoing maintenance of conformity. A compliance surveillance programme will be launched in 2022.

V. Outlook

As part of the health, safety and operational environment '2030 Flightpath' vision, we aim to promote and provide standards that are above our minimum legal compliance requirements. Consequently, in 2022 the Company will continue to reduce risk of work-related injury, ill-health and environmental impact, by improving management system elements, monitoring and data analysis.

The Company will therefore continue to increase the geographical deployment and technical scope of the FISH platform to support a strategy of data-driven risk analysis and mitigation. In particular the incident management module is planned for deployment in sites in North America and the Asia Pacific region.

As the corporate ISO45001 based occupational health and safety management system matures, a company Health and Safety Governance Board is planned, to maintain clear oversight and steer the 'zero harm' ambition. At national level, occupational health review panels are also planned, to address topics such as occupational disease cause analysis, risk mitigation strategies and emerging competency requirements. The Company will continue to strengthen its efforts to enhance wellbeing and mental health protection.

Further key performance indicators (KPI) are to be introduced, including health KPIs. The FISH platform will enable a wider use of the all injuries frequency rate and the leveraging of near miss data.

6.1.4 RESPECT HUMAN RIGHTS AND FOSTER INCLUSION

A. Human rights

I. Introduction

A commitment to respect human rights

As a signatory to the United Nations Global Compact since 2003, the Company is committed to upholding international human rights principles and standards, including the International Bill of Human Rights, the International Labour Organization's ("ILO") Declaration on Fundamental Principles and Rights at Work and its Core Labour Standards. In doing so, the Company is committed to implementing policies and processes that meet the requirements of the UN Guiding Principles for Business and Human Rights, and the Organisation for Economic Co-operation and Development's ("OECD") Guidelines for Multinational Enterprises.

"Respect for human rights" was prioritised by the Company as one of the four sustainability commitments agreed by the Executive Committee and the ECSC at Board level during 2020.

The Company's actions to progress its ambition to 'embed and advance respect for human rights throughout its business, operations and supply chain' follow recommendations identified through a human rights impact and gap analysis conducted

Airbus SE / 2021 Board Report 97

by a specialist external human rights consultancy in 2019. This analysis considered current and upcoming regulatory requirements and international best practice as well as international principles and standards, including the UN Guiding Principles for Business and Human Rights. Details of these actions follow.

Human Rights	GRI	SASB	SDGs	Others	Others
	412 Human Rights Assessment		4,5,8,16		Vigilance Plan

Number of alerts of human rights concerns ⁽⁵⁾			5	4	-1
KPI and metrics assumptions: (1) following reports of concerns linked to forced and child labour and other labour rights. (2) % of the Company's with over 100 employees, cumulative since 2020, undergoing a social assessment including human and labour rights. (3) following social assessments including human and labour rights, carried out on the Company's sites. (4) Cumulative number of participants who have completed e-learning modules on human rights and modern slavery since 2018. (5) including forced labour and labour rights (received via OpenLine and other means) from internal sources or through the Company's supply chain					

Additional resources: [Code of Conduct](#), [Supplier Code of Conduct](#), [Modern Slavery Statement](#), [Human Rights on Airbus.com](#), [OECD Guidelines for Multinational Enterprises](#), [ILO Declaration on Fundamental Principles and Rights at Work](#)

II. Governance

The EVP Communication and Corporate Affairs has top level accountability for human rights at Executive Committee Level. During 2021, following formalisation of the Company's governance arrangements for human rights in 2020, the Company held a number of meetings and presentations to support and advance respect for human rights. These included:

Governance	Number of meetings during 2021	Key responsibilities
Human Rights Multi-Functional Team, chaired by the Global Lead for Human Rights	Target 6 Achieved 6	Ensuring the development and delivery of the human rights roadmap, including actions against agreed targets and support for awareness raising and capacity building.
Human Rights Steering Committee, chaired by the Head of Sustainability and Environment	Target 3 Achieved 3	Providing strategic guidance to support decision making and prioritisation, as well as providing guidance and support on progress.
Specific presentation on human rights at the Executive Committee	Target 2 Achieved 3	Agree and guide the strategic direction of the Company's human rights ambition, agree and guide the prioritisation of initiatives and resource allocation for implementation and review the status and effectiveness of actions in progress (including roadmap /targets /KPIs).

Airbus SE / 2021 Board Report 98

Specific presentation on human rights at the ECSC	Target 1 Achieved 2	Make and support decisions on identified salient issues and emerging significant risks, make and support decisions on key trends/ legislation and provide feedback and steering as required.
---	------------------------	--

The Company will review its governance on human rights as it moves from policy-setting into implementation.

Human rights policy

Building on the human rights commitments and expectations that have existed in various key documents for many years (including within the Airbus International Framework Agreement signed in 2005, the Company's Code of Conduct and

Supplier Code of Conduct), a key focus for 2021 included efforts to consolidate commitments to human rights standards and principles as well as expectations in this respect (aligned to international human rights standards and principles including the United Nations Guiding Principles for Business and Human Rights, the ILO Core Conventions on Labour Standards and the OECD Guidelines for Multinational Enterprises), into a specific internal human rights policy. The Company expects to finalise the policy in 2022.

In addition a number of internal and external stakeholders have supported the creation of the policy including divisional and functional representatives of the Human Rights MFT and Steering Committee and members of the Legal & Compliance team. When finalised, the Company intends to have the policy endorsed by the SE-WC which represents The Company's European social partners. Externally the policy has been reviewed by representatives from specialist expert human rights organisations, academics and civil society.

The human rights policy will help further embed due diligence throughout the Company through the creation of a specific Human Rights Management System and associated Directive. A key focus for 2022 will also include the development of methods and guidelines to support policy adherence as well as communication and associated training prioritising high risk functions.

III. Risk management

Risks related to the salient issues were embedded into the Company's risk portfolio in the frame of the Company's ERM system and an associated action plan developed to identify, assess and address identified impacts. Actions are reviewed regularly by the Human Rights MFT and any salient issues requiring particular focus are escalated to the Human Rights Steering Committee as well as the Executive Committee and ECSC as required. An update of actions related to the Company's salient issues follows, with further actions progressing throughout 2022. Taking into account that salient issues may change over time due to internal and external influences, the Company is committed to reviewing them annually.

Salient human rights issues

The Company's salient human rights issues (see box with impacted groups in parenthesis) were initially identified through a human rights impact and gap analysis carried out in 2019. This identification was based on a benchmark of industry peers and companies in similar industries and an analysis of stakeholder expectations, including consideration from a rights-holder perspective. These issues were reviewed, updated and validated during 2020 through the Human Rights MFT and engagement with a number of key external stakeholders, including human rights NGOs, academics/ researchers and industry groups.

Salient Human Rights Issues

- Impact of products and services on the right to life and liberty (passengers and citizens)
- Data privacy (individuals and their personal data)
- Transition to decarbonisation (supply chains)
- Forced and child labour and labour rights (contractors and supply chains)
- Diverse and inclusive workplaces (Airbus workforce and contractors)

- **Impact of products and services on the right to life and liberty (passengers and citizens):** Actions are ongoing. A multi-functional and cross-divisional team is currently reviewing how to integrate risk-based human rights due diligence through existing processes and tools.
- **Forced and child labour and other labour rights (contractors and supply chain):** Key activities to mitigate the risk of forced and child labour and other labour rights in the Company's supply chain included the roll out of the Company's revised Supplier Code of Conduct, with strengthened expectations on forced and child labour as well as other human and labour rights and a requirement for suppliers to formally confirm adherence to the Supplier Code of Conduct and to cascade the principles throughout their supply chain. In addition, the Company took actions to strengthen its supply chain due diligence including updated risk mapping (country and activity) and a review of its risk identification and alert management process. For further information, see " – 6.1.6 Responsible Supply Chain".

Airbus SE / 2021 Board Report 99

- **The transition to decarbonisation (supply chain):** 2021 was dedicated to identifying the key areas of risk that the Company's transition to decarbonisation may create, affecting in particular human rights. The identified areas include the potential impact on local communities of the production of Sustainable Aviation Fuels (SAF), offset initiatives or specific minerals required in the development and manufacturing of new technology. The Company is already engaged in various coalitions (e.g. the Roundtable for Sustainable Biomaterials and the International Sustainability and Carbon Certification) to ensure that human rights dimensions are considered in these areas.
- **Inclusion and diversity:** During 2021 actions to progress this salient issue included agreeing a '25 by 25' gender diversity ambition to increase female representation at executive levels of the Company, creating a robust pipeline including specific leadership programs for women, such as 'MyWay' and, to support inclusive leadership, a mandatory Unconscious Bias training module was rolled out for all employees (with a target to achieve 100% by end of 2021). For further information, see " – 6.1.4b Inclusion and Diversity".
- **Data privacy:** During 2021, the data privacy team continued to implement and improve the data privacy programme throughout the Company. Actions were taken to ensure that the international transfer of personal data is completed in line with new requirements. Further steps were taken to ensure that, prior to contracting, suppliers processing personal data on behalf of Airbus are vetted and the appropriate mechanisms put in place to ensure they process data in line with legal requirements.

Due diligence:

During 2021, the Company began to strengthen its risk-based human rights due diligence aligned with the OECD Due Diligence Guidance for Responsible Business Conduct. This focus, which will continue throughout 2022, included:

- Supply chain due diligence
- Due diligence within the Company's own operations
- Product and service due diligence (focused on the Company's Defence Division)

Social assessments (focused on human and labour rights):

During 2021, the Company conducted a number of onsite social assessments focused on human and labour rights covering its own sites. These onsite assessments were carried out using an independent third-party social assurance provider consistent with the assessments carried out in the Company's supply chain.

Building on the initial pilot carried out during 2020, eight sites (against a target of four) undertook a social assessment during

2021 in countries including Germany, Belgium, US, France, Italy, Malaysia, China and the Philippines. The sites were selected based on an analysis of country risk using publicly available indices (including child labour, forced labour and labour rights), the type of activity (prioritising production facilities) and the number of employees. In addition, any alerts relating to human rights coming from other sources, including the ICSA process, and upcoming legislative requirements were also taken into account.

The Company has a target to ensure that all findings are closed within an 18 month period following assessment. In addition, in order to strengthen its due diligence process, the Company has set a target to ensure that 100% of its sites with over 100 employees are assessed for human and labour rights risks by 2026.

Supply chain:

The Company continued to assess its supply chain for any concerns related to human rights, including forced and child labour and other labour rights, throughout 2021. For full details, see " – 6.1.6 Responsible Supply Chain".

Grievance and remediation:

During 2021, the Company continued to promote its "speak-up" culture for human rights concerns, including reinforcement of the use of its OpenLine confidential reporting system, within its revised Supplier Code of Conduct (see " – 6.1.6 Responsible Supply Chain").

If an allegation of human rights breach received from within the Company or through its supply chain or other third party business relationships is found to be substantiated, remedy would be sought through a variety of mechanisms. If an alert is received via its OpenLine reporting system, the Company commits to acknowledge receipt of the report within two business days. The Company has a global network of internal investigators, tasked with investigating allegations, including those relating to human rights such as forced or child labour, or labour rights and working conditions.

Airbus SE / 2021 Board Report 100

During 2021, the Company investigated four alleged cases of concern related to forced labour and other labour rights from within the Company's supply chain. All of the cases are closed as either unsubstantiated or with a consequential action. The Company will continue to investigate any new alerts during 2022.

IV. Implementation / activities

Awareness raising and training:

During 2021, the Company continued to raise awareness of human rights including through the promotion of its dedicated training on human rights and modern slavery which is available to all employees in four languages. During the period October 2020 - September 2021, 846 participants undertook this training (5,789 in total since its launch), which included information on how to identify the signs of human rights abuse and what to do if anybody has concerns. In addition, two dedicated virtual awareness sessions were run for the heads of subsidiaries (attended by 140 people) to raise awareness of human rights which included practical examples of how to identify and report risks. The sessions were recorded so that those not able to attend directly could review the recording.

A dedicated eLearning module on human rights, targeting senior managers, including the heads of subsidiaries and controlled affiliates, was produced in 2021 and will be rolled out during 2022. In addition a new e-learning module will be created for all employees to raise awareness of human rights with the intention that this becomes mandatory to all employees from 2023.

Additional topic-based training relating to human rights is also available to all employees of the Company, a number of which are mandatory, including data privacy and inclusion and diversity topics such as unconscious bias.

Stakeholder engagement and collaboration:

During 2021, the Company joined the Global Business Initiative on Business and Human Rights (GBI), a specialist peer learning group focused on advancing respect for human rights throughout the world. As part of its membership, the Company also took part in two dedicated workstreams: downstream due diligence and tracking and measurement, the progress of which were shared with other GBI members.

The Company is also a member of a number of industry trade associations which during 2021 held focused discussions on progressing human rights within the aerospace and defence industry. These include the BDSV (German Industry Association for Security and Defence), ASD (the Aerospace and Defence Industries Association of Europe), GIFAS (French Aerospace Industries Association), ADS (UK Industry Association for Aerospace, Defence, Security and Space) and TechUK (the UK's technology trade association).

The Company also engaged with a number of external stakeholders on human rights in order to advance the topic through external collaboration. These included academics, researchers, civil society organisations, officials and peers. A number of discussions with the Company's investors on the topic of human rights also took place during 2021, including on the topic of forced labour.

In addition, an update of the human rights roadmap was also presented to key internal stakeholder groups including the Societas Europaea Works Council ("SE-WC") and the European Committee for Airbus Defence and Space ("ECADS") comprising social partners from across the Company's European sites.

During 2021, the Company's Defence and Space Division continued to work with the UK's University of Nottingham Rights Lab on a project to monitor supply chain human rights challenges across sectors including maritime, agriculture and mining. Analysis of earth observation satellite imagery helps to identify supply chain human rights issues, such as flagging suspicious activities for further investigation, or can act as additional evidence for reported supply chain issues. The Division has also started to scope its own supply chain risk assessment tools for the Company by integrating satellite imagery derived intelligence with additional reported data from third parties on potential supply chain human rights risks.

Regulatory compliance:

During 2021, the Company undertook an analysis of current legislation related to human rights including the French Devoir

de Vigilance Law and the Modern Slavery Acts in the UK and Australia. In addition, the Company undertook an analysis of relevant upcoming legislation including the German Act on Corporate Due Diligence Obligations in Supply Chains. Actions to fill any identified gaps will be undertaken throughout 2022.

During 2021, in accordance with the UK Modern Slavery Act and the Australian Commonwealth Modern Slavery Act, the Company published a Modern Slavery Statement outlining the actions it had undertaken to mitigate modern slavery risks in its global business, operations or supply chain. This Statement was published on the UK Government and Australian Government websites as well as the Company's website. In addition the Company completed the UK Ministry of Defence (MoD) Modern Slavery Assessment Tool.

V. Outlook:

During 2022, the Company will continue its focus on embedding and advancing its commitment to respect human rights throughout its business, operations and supply chain. Specific ongoing actions include:

- Finalisation of the Company's human rights policy.
- Embedding human rights commitments throughout the Company.
- Further progressing risk-based due diligence within the Company.
- Prioritising actions based on the Company's Identified salient human rights issues (to be reviewed in 2022).
- Progressing social assessments focused on human and labour rights throughout the Company's sites.
- Capacity building with key teams including development of training, communication and awareness raising.
- Ensuring alignment of actions with current and upcoming legislation.

B. Inclusion & diversity

I. Introduction

"Respect Human Rights and Foster Inclusion" is one of the four sustainability commitments. This priority reflects the focus the Company puts on Inclusion & Diversity ("I&D") and is illustrated by the 137 nations and 20 different languages that its employees represent.

An I&D position statement outlines the Company's commitments to creating a safe and inclusive culture, including zero tolerance to discrimination and harassment, whilst the Company's Code of Conduct and Supplier Code of Conduct expresses the expectations towards both employees and suppliers in this respect.

In line with the Company's values, a comprehensive I&D strategy drives the Company's approach to embedding I&D focusing on intergenerational, ethnic, social and cultural diversity as well as gender equality, LGBTQ, neurodiversity and disability-friendly policies and hiring practices. The I&D strategy aims to ensure that the Company:

- creates a safe environment and inclusive culture where collaboration, empowerment, continuous learning and accountability are promoted and valued. The Company has zero tolerance for harassment or discrimination of any kind;
- attracts, recruits, develops and retains a large and diverse pool of talent. This talent is a reflection of our customers and suppliers base as well as the communities around us;
- develops a thriving work environment supported by its values system, leadership model as well as a code of conduct understood and practiced by all;
- is committed to have a positive long-term sustainable impact not only in the aviation sector but also in the communities we work in by being signatories to the SDGs.

Inclusion & Diversity	GRI	SASB	SDGs	Others

Partnerships supporting people with disabilities ([Atouts pour tous](#), [Handisup](#), [Handiproconseil](#))

II. Governance

The I&D team is part of the "DEVELOP Center of Expertise" within the Human Resources function and represents each of the Company's Divisions, with regional I&D focal points supporting the implementation of the I&D strategy globally.

An I&D Advisory Board, chaired by the Chief Human Resource Officer with representatives from the Executive Committee and other Divisional and regional executives, meets quarterly and provides top level oversight and input into the I&D strategy as well as reviews risks or issues raised, providing support on new initiatives, processes or changes to policy and make appropriate recommendations to the Executive Committee.

In addition, local I&D (including disability) steering committees, championed by senior leaders and executives in the regions, provide additional support to embed and advance the I&D strategy locally and provide valuable input to the I&D team and Advisory Board. The steering committees are supported by a network of diversity Business Champions embedded in the business and who advocate for inclusive leadership.

III. Risk management

Any identified risks related to I&D are recorded in the Company's ERM and appropriate action plans agreed. Progress is reviewed quarterly.

In addition, any alerts related to I&D raised *via* the Company's "speak-up" culture, including its OpenLine reporting system, are investigated in accordance with the Company's investigation process.

IV. Implementation / activities

The Company supports various national and international initiatives such as International Women's Day and since 2018 we have committed to the UN Women's Empowerment Principles aimed at empowering women to participate fully in economic life. The Company has also led the "Women in Aviation and Aerospace Charter" and has been instrumental in the development of the "Women in Defence Charter" which demonstrates the commitment of a growing number of

Airbus SE / 2021 Board Report 103

organisations across the industry to build a more balanced and fairer industry for women. In addition, in 2020 the Company launched a "Management Basics & Leadership Foundations Programme" to ensure that inclusive leadership becomes the norm at all levels. In addition our Corporate Gender diversity leadership development launched a cohort dedicated to 50 women leaders of tomorrow. To date this programme has trained over 170 women, including the current cohort.

The Company is also accelerating change through its employee-led "Balance for Business" network, which has around 10,000 volunteer members worldwide. Initiatives run through this network include roadshows promoting employee-led initiatives such as peer-to-peer mentoring, confidence building and encouraging employees to challenge stereotypes and build their careers. The network also supports some outreach initiatives.

Other employee-led networks such as the Women Innovative Network ("WIN"), the Airbus Africa Network, Spectrum (Racial diversity and inclusion), Pride@Airbus (LGBTQ+), Generation-A (Millennials), Seniors Talent and (Dis)Ability ambassadors networks are key to raising awareness of I&D, promoting inclusion, equal rights and increasing visibility. Initiatives include mentoring, leadership development of under-represented groups as well as conferences and discussions open to all employees.

The annual *Ability Weeks* campaign aims to raise awareness on disability across the Company and worldwide. This includes a series of workshops and awareness sessions on topics such as: digital accessibility, workplace adaptations, mental health care. During 2021 more than 1,600 employees participated in live workshops, and over 50 events were organised worldwide. Our Airbus Humanity Lab also showcased prosthetic blades made from recycled carbon from our production lines.

Highlighting that being unique is valued and that difference is welcome, the Company ran an awareness campaign during 2021 to promote awareness of the importance of digital accessibility for employees with disabilities as a means for inclusion. The Company also engaged in various social diversity programmes during 2021 in partnership with a number of different associations to promote quality education and mentorship for young people from underprivileged areas. For example, the Company participated in the "*La France, une chance. Les entreprises s'engagent !*" initiated in 2018 by the French

government to encourage business to get involved in helping everyone find their place in society by, for example, recruiting from underprivileged areas, promoting education, learning and responsible purchasing and creating a link between these underprivileged areas and businesses.

During 2021, the Company disclosed its gender pay gap as required through both French and UK legislation and continues to put measures in place to ensure gender pay parity worldwide.

V. Outlook

Priorities for 2022 include continuing the Company's focus on gender parity. Upcoming actions on I&D include:

- eliminating systemic barriers during talent recruitment, development and management;
- agreeing on targets for external recruitment of women, external recruitment from non-EU countries and external recruitment of people with disabilities;
- extending leadership development programmes to include a focus on I&D and in particular on gender diversity;
- increasing awareness and training on inclusive leadership and unconscious bias;
- leveraging and reinforcing business ownership and accountability through the Company's network of diversity champions;
- continued support to encourage STEM studies for young women in schools and universities through mentorship, tutorship, directly or through the associations sponsored by the Company.

C. Labour relations

I. Introduction

In 2021 again, the Company has continued its numerous discussions, consultations and negotiations with its social partners, sometimes on a daily basis in order to discuss company transformation projects aiming at adapting to the evolving situation partly resulting from the health and economic crisis.

These various transformations were carried out in line with the common principles and standards of the ILO convention, the OECD Guidelines for Multinational Enterprises and the principles laid down by the UN Global Compact.

Employee relations are underpinned by the Company commitments made in the Company's Code of Conduct and the Airbus International Framework Agreement, signed in 2005.

[OECD Guidelines for Multinational Enterprises](#), [the Global Deal Initiative](#)

II. Governance

In the International Framework Agreement ("IFA"), the Company reaffirms its willingness to respect the regulation regarding fundamental human rights, equal opportunities, free choice of employment, as well as prohibition of child labour and respect and ensuring the conditions for social dialogue.

The Company intends, *via* its agreements, to respect the disposition of the following ILO conventions: numbers 111 (discrimination – employee and occupation), 100 (equal remuneration), 135 (workers' representatives), 29 (forced labour), 105 (abolition of forced labour), 182 (child labour), 138 (minimum age), 87 (freedom of association and protection of the right to organise) and 98 (right to organise and collective bargaining).

The head of each business is responsible for ensuring compliance with these principles. The provisions of this framework agreement define the Company's standards to be applied wherever the Company operates provided they are not in contravention of local law, insofar as more favourable conditions do not exist already. Dedicated processes ensure that the provisions of this agreement are not breached wherever the Company operates.

The Company is in continuous dialogue with social partners on its sites in Europe, principally through meetings with management at the European Committee level but also through meetings and negotiations at national or local level. Sites outside Europe are also covered by the Company's IFA framing the social dialogue and social culture in line with local labour legislation, culture and practices of respective countries.

Regular social dialogue is ensured as per ILO requirements and local legislation and company agreements about social dialogue, for instance in Europe, thanks to the Company's SE-WC agreement which was updated in 2018. Labour relations and social dialogue are fully part of the Company's DNA and therefore, its continuous evolution and improvement are embedded in the Company's Human Resources strategy supporting the Company's business challenges. Especially, in cases of restructuring, the Company strives to limit as much as possible the negative impacts on its workforce, and considers employment as a priority.

on in both its social dialogue strategy and in its 2019, the AGF is a clear illustration of the company's engagement for a responsible social dialogue. The seat allocation for employee representatives is based upon Airbus headcount distribution across the globe and conditional to existing legal employee representation as per applicable regulations and practices in the relevant countries.

In addition, the Company is an active member of the Global Deal for Decent Work and Inclusive Growth initiative ("Global Deal") that was developed in cooperation with the ILO and OECD. The Global Deal is a multi-stakeholder partnership between governments, business and employers' organisations, trade unions, civil society and other organisations that seeks to make economic growth work for all against a backdrop of rapid changes in the world of work.

Airbus SE / 2021 Board Report 105

III. Risk management

The European labour relations' management of the four home countries of the Company (France, Germany, UK, Spain) is also part of the Company risk management processes and these risks are reviewed internally on a regular basis. For example during 2021, employee relations continued to focus on ensuring legal compliance regarding national labour laws and investing in training the Company's HR professionals about labour law. The Company's approach to risk management is also reinforced by the OpenLine reporting system, which allows employees to report concerns anonymously (where legally permitted).

IV. Implementation / activities

During 2021, the Company continued activities aimed at strengthening collaborative and partnership approaches with unions in various countries. The main focus has been on preserving global social dialogue, addressing company transformation projects, and monitoring the implementation and the effects of the COVID-19 adaptation plan and sharing our progress about sustainability.

Preserving a global social dialogue

The second Airbus Global Forum (AGF) took place early July 2021 in a digital format and has proven again to be an effective exchange platform between our top leaders in the regions and our employee representatives from our home countries, Poland, Romania, Morocco, Tunisia, Brazil, New Zealand, Australia, Mexico, Canada and China. The AGF agenda triggered insightful discussions around business highlights including the challenges and priorities for 2021 and 2022 as well as I&D, People Ethics & Compliance - especially anti-harassment - and our well-being strategy. It also served as an opportunity to enhance the perspective of our social partners on local and regional practices with regards to social matters, especially out of our European home countries.

At the Company's Airbus Helicopters Division, four European committees have taken place. The main topics have been the follow up of the Division's performance and strategy, the site specialisation strategy and more globally the company transformation, focusing in particular on competitiveness.

At the Company's Airbus Defence and Space Division, six European committees have taken place. The main topics have been the follow up of the adaptation plan, known as Future Planning, including financial competitiveness, the strategy and performance of the Division with a focus on sustainable transformation, including the AD 4.1 reorganisation during the later part of 2021.

Supporting Company transformation

"Reshape Supply chain" (RSC) was one of the major company transformation projects in 2021, which was subject to numerous discussions with our social partners at European and local levels. This project aims at creating two aerostructures companies of equivalent position and size in France and Germany (ca. 9,500 employees each) to prepare the future of fuselage aerostructures. As part of the discussions, the SE-WC nominated independent external experts to analyse the social, economic and financial impact of the project. Based on extensive data analysis and interviews, the report supported the project's principles and acknowledged the transparent sharing of information and data by Airbus management that permitted the experts to formulate their opinion. The constructive discussions at European and national level finally resulted in the creation of Airbus Atlantic as of January 2022. The negotiations about the creation of the aerostructures company and its impact on the detail parts activities is continuing with our social partners at company level in Germany, as well as with IG-Metall as legally required by Works Constitution Act and Tariff agreements.

In Spain, many discussions took place to address the consolidation of the industrial activities and the maintenance of the full workload in the Province of Cádiz in the CBC work Centre. National and regional authorities, Airbus, both the internal works council and main national unions agreed to have a commission to monitor fulfillment of the agreements.

Finalising the implementation of the COVID-19 adaptation plan

In 2020, COVID-19 adaptation plan discussions resulted in the signature of various collective agreements by the main unions or staff body representatives in France, Germany, Spain and the UK covering all employees in Airbus' commercial aircraft business within these countries so that the overall adaptation plan could be completed in 2021 and compulsory redundancies avoided. The agreements provided for a range of social measures including: trainings, internal mobilities, working time adaptations, voluntary departure schemes, early retirement and the opportunity to pursue personal or professional opportunities outside of the Company, such as business creation as well as dedicated partial unemployment schemes to be implemented in order to adapt activities and the workforce in 2021. In particular the signature of agreements about shorter working week in the UK, long-term partial unemployment in France and the long-term partial unemployment scheme in Spain (ERTE) have been agreed with the majority of the social partners. In addition a substantial portion of jobs have been

Airbus SE / 2021 Board Report 106

secured due to external funding for research and technology programmes, anticipating that these jobs would be needed in the post pandemic recovery phase.

Preparing the future

The Company is committed to preparing for the future of employment and working conditions together with the social partners:

In Spain, the VI CBA (Collective Bargaining Agreement) has been signed in 2021 with the majority of the social partners from the commercial aircraft business and its two Divisions for a four-year period (2020/2023). The main aspects covered were: salary conditions, working from home, training to face new technologies, early retirement scheme and both employment and gender equality plans.

In France, the Company also started a long-term social dialogue with employee representatives in 2021 in the frame of a project named "Reload" which aims at simplifying and harmonising company agreements related to compensation, benefits, grading, working time duration, health, safety and working conditions to make them more readable for its people and adapted to the Company's challenges. This project aims also at integrating the evolution of the Metallurgic Branch Agreement.

In Germany, apart from the RSC project, the social dialogue was mainly focussed on ensuring industrial and financial performance as a foundation for job security and future programs in a ramp-up context. Agreements on mandatory work on defined Saturdays at reduced premium rates (compared to similar agreements from 2019) have been achieved for 2021. Approval of additional (flex) capacity is a second brick to ensure ramp-up activities particularly in production areas.

Enabling for sustainability plans

In Europe, the Company's social partners were also closely involved in discussions on the health and safety measures taken in the workplace to protect workers and prevent the spread of COVID-19. This included the provision of additional personal protective equipment (PPE), team rotations, homeworking, social distancing and regular communication particularly on any special site measures. The social partners in Europe have also been informed about the actions taken and the future endeavours of the Company with regards to the identification and mitigation of risks inherent to Airbus activities and those of its suppliers with regards to human rights, environment and health and safety.

V. Outlook

In 2021, the Company maintained the accident frequency rate as one of the KPIs integrated in its executive and employee success sharing scheme. It is the Company's intention to continue in this direction; notably it has already engaged further in discussing with social partners about the possible inclusion of another sustainability criteria (CO₂) in the remuneration of senior managers from the year 2022.

The Company will continue its dialogue with social partners, sharing its strategy and organisational changes and preparing for our evolving ways of working, as it was done in 2021. The RSC project will continue to be a key area to ensure the successful creation of an aerostuctures company in Germany. Other key areas will be the ramp-up of our activities in 2022 and the transformation projects which will be essential to Airbus' future successes.

D. People

I. Introduction

The Company's people draw on each other's expertise and experience and puts all our passion and determination to pioneering sustainable aerospace. Human Resources (HR) is at the heart of the Company.

The current priorities of the Company's HR function are:

- Engaging, inclusive and high performing leadership
- Skilled workforce and an agile learning organisation
- Inclusive workplace and simplified ways of working

As of 31 December 2021, the Company's workforce amounted to 126,495 employees (compared to 131,349 employees in 2020), 95.7% of which consisted of full-time employees. These statistics take into account consolidation effects and perimeter changes throughout 2021. Depending on country and hierarchy level, the average contractual working time is between 35 and 40 hours per week.

Airbus SE / 2021 Board Report 107

The decrease in total headcount was the result of the COVID-19 adaptation plan in the Company's commercial aircraft business and the already planned restructuring of the Company's Defence and Space Division. Consequently, the number of newcomers had significantly decreased. The decision to restrict new hires in all businesses impacted by the crisis had been taken and the number of leavers had significantly increased as a result of the voluntary departures in the framework of the adaptation plans. Despite the crisis, the Company fulfilled commitments towards candidates already selected prior to the crisis and welcomed 5,655 newcomers. Voluntary departures have triggered an increase in the Company's attrition rate, which in 2021, is 7.4% overall (including subsidiaries) and 12.2% in subsidiaries only.

Reflecting the fact that the Company is an international company, 35.4% of its employees are from France, 31.5% from Germany, 7.7% from the UK and 10.3% from Spain. The remaining 15.1% are employees coming from a total of 134 other countries. In total, 89.1% of the Company's active workforce is located in Europe on more than 100 sites. Furthermore, the Company expects its workforce to evolve naturally to support the business.

Workforce by business segment, geographic area

The breakdown of the Company's employees by business segment and geographic area, including the percentage of part-time employees, is available in " – 6.1.8 ESG Data Board".

The workforce of the Company's Helicopters Division remained stable in line with its business resilience during COVID-19 crisis, while the adaptation plans in the Company's commercial aircraft business and the Company's Defence and Space Division has started to materialise with a significant decrease.

Employer awards 2021: Universum», Glassdoor», Fortune», Top Employer Institute», Forbes»

II. Governance

The Company's workforce is managed by the HR function thanks to a set of HR policies and a strong labour structure. HR policies are discussed and agreed with social partners through continuous and regular meetings at global and local levels. The overarching Human Resource policy in place is applicable to all employees and provides them with the description of the core values, mission, vision and top level initiatives for Human Resources Management in accordance with Airbus Mid-term Strategic Plan and external requirements.

The Chief Human Resource Officer is a member of the Executive Committee. HR teams work together across Divisions and geographical boundaries to support regional activities and adapt to business needs.

Airbus SE / 2021 Board Report 108

III. Risk management

Any identified risks related to the workforce and its skills and development are recorded in the Company's ERM and appropriate action plans agreed.

In addition, the Company periodically measures the perception of its employees on where the Company stands in terms of company culture and engagement through the "My Working Environment" Company Survey. The employees' feedback provides valuable input to define an action plan, leveraging the Company's cultural strengths to build on and addressing the pain points to be improved. The Company culture and engagement are regularly measured to keep track of the progress and adjust actions.

IV. Implementation / activities

People development and competence assessment

The development of all employees is essential to deliver business success. The Company strives to provide an environment that offers opportunities and the means for continuous growth and development in line with its strategy.

A yearly process derives a short, mid- and long-term competence strategy out of the Company's business strategy by:

- Anticipating the supply and demand of competencies
- Identifying, securing and developing key competencies
- Creating added value through synergies, networking and best practices.

Investments in training and learning are prioritised in relation to this competence strategy.

In addition, emerging long-term competence needs are analysed – which might not exist today, and for which specific measures need to be taken, e.g. with universities. The Company is actively participating in external forums on competence evolution, such as the World Economic Forum and European Commission.

In order to ensure quality time is dedicated to discuss employee's development, Airbus has, as part of its "manage employee development" process, implemented the Development Talk, which is an exchange between the manager and employee that can take place as often as needed but at least once a year. The purpose of this talk is to discuss the individual development plan of the employee and to bring individual expectations in line with company expectations.

Competence Assessment supports employee development and has to be performed at least every two years.

The company provides to the employee a portfolio of self-awareness solutions and feedback tools, that can be used on a voluntary basis, to prepare, in advance, the development talk and development plan. All agreed development actions are formalised in the employee development plan which has to be validated by the manager. These actions may consist of:

- Workplace learning or "on the job solutions" including development via mobility, project assignment, etc.
- Social learning, such as mentoring

- Formal training.

Training & mobility

COVID-19 has been destabilising and has had a significant impact on the Company's learning activities, resulting from the need to reduce cash spend to secure business continuity. While the various restrictions and national lockdown measures have limited the Company's ability to deploy physical classroom sessions, the Company invested further in its digital learning platforms to increase digital learning that more than doubled compared to 2019.

Measures were taken in parallel to adapt physical classroom training sessions to comply with the strictest health and safety measures ensuring the delivery of the mandatory and critical training without disruption to operations. The acceleration of the digital learning strategy has allowed employees to remain active in their development during periods of remote working and partial unemployment (according to social agreements).

In addition, in 2021, to support the skills foundations and Top Company Objectives, the Company has defined and assigned compulsory learning plans directly to its employees, covering Ethics & Compliance, Export Control, Data Governance & Protection, Product Safety, Cybersecurity, Internal Controls, Environmental Awareness and other topics. This new approach allows us to secure the needed training and awareness on major company priorities.

In 2021, the Company provided almost 1.2 million training hours to employees. On top of the physical classroom and digital training, in 2021 more than 39,500 employees benefited from leadership development and transformation solutions

Airbus SE / 2021 Board Report 109

proposed by the Airbus Leadership University. The university continues to strengthen the Company's approach to leadership, offering opportunities for all leaders to drive their development one step further, while accelerating the culture evolution and human transformation of the Company.

Learning solutions and managerial opportunities are not the only way to develop people in the Company. Development paths give also possibilities to employees to develop specific skills, competence and jobs, such as Project & Program Manager, Architects & Integrator and Expert career paths.

The Company is also involved in the "Pact for Skills" initiative launched by the European Commission to address the upskilling and reskilling challenge in Europe. It is working together with aerospace and defence industrial companies, public authorities, and education and training providers, to build common upskilling and reskilling programs and explore ways of working together in skills partnerships.

Mobility of employees within the Company's commercial aircraft business and its two Divisions provides overall benefit and value to the Company. Mobility helps employees develop new skills and competences and serves the business by bringing new ideas and broader perspectives to teams while ensuring to have the right skills in the right place to secure the future. In 2021, as of end of December, more than 10,400 employees have changed jobs through internal mobility.

Remuneration

The Company's overall remuneration policy is in line with local practices and provides employees with a competitive overall compensation package. It is also an enabler to attract new talents and retain talented employees contributing to the Company's business success. Airbus will compensate its own employees with, at a minimum, a living wage covering their basic needs calculated in-line with best practice.

For employees below manager level, collective labour agreements are applied in the Company's home countries (France, Germany, UK and Spain). This includes wage levels and increases, supplementary grants and gratifications (e.g. end of year gratification). Starting at manager level, compensation of employees can contain a variable part. The percentage of such variable pay in total compensation increases at higher hierarchical levels.

Support for health care, unemployment insurance, national and company pension systems as well as social security contributions are mainly subject to national regulations and regulations implemented earlier by the founding companies. Some benefits or specific worldwide schemes are implemented such as sharing the financial and operational success of the Company with the employees (success sharing scheme) or developing the Company ownership culture (Employee Share Ownership Plan - "ESOP").

Employee Share Ownership Plan

The ESOP allows employees to participate in the success of the Company. This plan is an investment option open to eligible* employees to acquire a certain number of Airbus shares. The ESOP scheme has been running in different formats since the foundation of the Company in 2000. The ESOP scheme since 2011 is a "share matching plan" in which the Company matches the number of shares bought by the employee according to set criteria.

In 2021, more than 54,750 eligible employees from 40 countries have seized the opportunity to subscribe and now own 1.97 million shares. (Eligibility rules: an eligible employee in the frame of ESOP 2021 is part of an entity which is at least 50 % owned by Airbus, and has been an employee between 31 December 2020 and 17 March 2021.)

V. Outlook

Starting in 2022 and over the next three years, the Company is expected to resume recruitment with several thousand positions to be filled in the different functional and geographical areas of the Company to support the recovery and future activity growth, to prepare for the development of future programmes and to continue its generational renewal. A quarter of these recruitments will concern new skills on projects such as those linked to the development of hydrogen aircraft.

Leveraging global attraction campaigns and strengthening collaboration with the business to deliver on staffing needs is key. The staffing challenge will be a joint responsibility between HR and business to deliver on expectations.

In the meantime, the Company will continuously focus on people development to close the gap on critical skills needed and will invest into emerging skills development. The Company aims at becoming an agile learning organisation as reskilling is considered as a major part of the learning culture: in the short term, to support critical ramp-up projects, and in the long term to sustain the acceleration of skills shift driven by the Airbus context and external trends.

Airbus SE / 2021 Board Report 110

6.1.5 EXEMPLIFY BUSINESS INTEGRITY

I. Introduction

The Company's Ethics & Compliance programme seeks to ensure that the Company's business practices conform to applicable laws, regulations and ethical business principles, as well as reinforcing a culture of integrity and speak-up. In 2021, Ethics & Compliance continued to be a top priority for the Company, following the completion of the first phase of the ongoing mentorship by the Agence Française Anticorruption within the context of the settlement agreements reached between Airbus and the authorities on 29 January 2020. In its list of priorities for the year, the Company set the objective to Speak Up, Listen Up and act with integrity and respect.

The Company has worked over the past several years to develop an Ethics & Compliance programme that is structured around the following key risk areas: Business Ethics / Anti-Corruption Compliance, Export Compliance and Data Privacy Compliance. Each of these areas is, in turn, supported by dedicated compliance policies and a team responsible for their implementation, together with the identification and proposal of new measures to adapt to a constantly evolving regulatory landscape.

Improving the Ethics & Compliance programme remains a constant and ongoing process, in cooperation with other functions within the Company, in order to sustain and capitalise on our values.

----------------------	--

II. Governance

The Ethics & Compliance organisation is part of the Legal Department under the ultimate responsibility of the Company's General Counsel. The aim is to provide strong governance throughout the Company with the global presence of qualified Compliance officers who ensure the Ethics & Compliance programme is implemented consistently in the different functional and operational areas.

The Company's Chief Ethics & Compliance Officer, who reports to both the General Counsel and the ECSC of the Board of Directors, leads a dedicated team of Compliance professionals who are responsible for supporting and advising across the Company on compliance related topics, supporting the day to day business, performing risk assessments, drafting policies, conducting third party due diligence, investigating compliance allegations, implementing tools and controls and delivering compliance training.

The ECSC also plays a key role in the oversight and continued development of the Company's Ethics & Compliance programme, organisation and framework for the effective governance of Ethics & Compliance.

In addition to the dedicated Compliance professionals, the Company is coordinating a network of part-time ethics & compliance representatives ("ECRs"), spanning all Divisions, functions, and regions. The number of ECRs slightly increased in 2021, with a total of 340 ECRs at the end of 2021 (compared to 335 at the end of 2020). Although the ECR network members

Airbus SE / 2021 Board Report 111

are not compliance experts, they play an important role in promoting the Ethics & Compliance programme and culture and serve as points of contact for any employee who has questions about the Ethics & Compliance programme or wishes to raise an Ethics & Compliance concern, including but not limited to bribery or corruption. The Ethics & Compliance team is animating the ECRs network, providing continuous training and information of the ECRs.

Likewise, the Personal Data Protection Officer ("DPO") relies on a team of data privacy experts to guide, train and advise the business with respect to data privacy requirements, and a network of Data Privacy Focal Points in the business functions and affiliates, to support the Airbus data privacy programme. In 2021, the DPO and the data privacy team were integrated in the Legal & Compliance function.

III. Risk management

The Company is required to comply with numerous laws and regulations in jurisdictions around the world where it conducts business. This includes countries perceived as presenting an increased risk of corruption.

Accordingly, since 2017, the Company has been conducting a thorough bribery and corruption risk assessment across its two Divisions and different businesses. The results of this risk assessment are embedded and monitored within the Company's ERM framework and highlight, among others, the risk of improper payments being made to or via third parties such as sales intermediaries, lobbyists and special advisors, suppliers, distributors and joint venture or offset partners. Further corruption risks include the use of sponsorships, donations, or political contributions to improperly benefit decision-makers, or the provision of excessive or overly frequent gifts and hospitality by Airbus employees. In order to ensure its compliance with Export Control regulations and laws in the EU, US and internationally, the Company continues to review its Export Control compliance programme to ensure it is fit for purpose. Where risks are identified, they are embedded and monitored in the Company's ERM. Identified risks include potential unauthorised access to export controlled data and hardware by third parties and non-compliance with the International Traffic in Arms Regulations ("ITAR").

Regarding Data Privacy, the Company undertakes privacy impact assessments depending on the nature of the personal data processed or scale of the processing. In addition, risks relating to the protection of personal data are also assessed in the context of the ERM and kept updated.

Specific directives have been adopted to address the Company's key compliance risk areas. These include among others:

- Requirements for Gifts & Hospitality;
- Requirements for Sponsorships, Donations and Corporate Memberships;
- Requirements for the Prevention of Corruption in the Engagement of Sales Intermediaries;
- Requirements for the Prevention of Corruption in the Engagement of Lobbyists & Special Advisors;
- Requirements for Supplier Compliance Review;
- Requirements for Compliance Block List;
- Requirements for Preventing and Declaring Conflicts of Interest;
- Requirements for the Prevention of Corruption related to Mergers & Acquisitions, Joint Ventures, Partnerships and similar Transactions;
- Method for the Prevention of Corruption in the Context of International Cooperation & Offset Activities;
- Requirements for Anti-Money Laundering/Know your Customer;
- Guidelines for Competitive Intelligence Gathering Activities
- Requirements for Export Control Sanctions, Embargoes and Screening;
- Requirements for Export Control Framework;
- Requirements for Export Control Escalation and Voluntary Disclosure;
- Requirements for Export Control Brokering;
- Requirements for Export Control Classification;
- Requirements for Export Control Licences and Agreements;
- Requirements for ITAR Part 130 Reporting;
- Personal Data Protection Directive, Method and Binding Corporate Rules.

The Ethics & Compliance organisation is charged with oversight and monitoring of these directives to ensure that they are being implemented effectively. Periodic controls on key processes are performed and reports provided to the Company's Executive Committee and the ECSC, including recommendations to strengthen the Ethics & Compliance programme where necessary.

Airbus SE / 2021 Board Report 112

In addition, the Corporate Audit & Forensic Department conducts periodic, independent audits of the Company's compliance processes to assess the effectiveness of internal controls and procedures and allow the Company to develop action plans for strengthening such controls.

IV. Implementation / activities

Awareness and training

All Company employees are required to undergo a minimum amount of compliance training via e-learning. Additionally, depending on the function, the country and the level of risk implied by their role, certain employees are selected to attend live classroom training as well. Attendance in such cases is mandatory, and managers have a responsibility to ensure that their team members do so.

From 1 October 2020 to 30 September 2021, the Company's employees followed 284,774 Ethics & Compliance e-learning sessions, including on bribery, corruption and export control. Furthermore, 5,050 employees attended live classroom training on different Ethics & Compliance topics in 2021, the majority of which were delivered in virtual classroom settings due to the pandemic.

Likewise the Company also delivered anti-bribery and corruption training towards higher risk third parties, including sales intermediaries, lobbyists and special advisors. In 2021, 81% higher risk third parties were trained on Ethics & Compliance requirements and expectations.

The Company continued the roll out of the data privacy e-learning as part of the Ethics & Compliance compulsory training catalogue. Approximately 9,500 data privacy training sessions were performed in 2021 (reporting period from 1 October 2020 to 30 September 2021). Since the entry into force of the EU General Data Protection Regulation in 2018, the Company's employees performed approximately 90,000 data privacy e-learning sessions.

"Speak-up" Channel: OpenLine

The Company recognises that the Code of Conduct cannot address every challenging situation that may arise, and therefore

airbus.com) The Company publishes various internal articles through the Intranet, available at <https://www.airbus.com> related to Ethics & Compliance.

In 2020, I&D was expressly added to the definition of the “Human Resources” topic. Product safety, previously covered by a broader “Procurement and Product Security” topic, is now displayed as a separate category as well.

In addition, the dataprotection@airbus.com mailbox is systematically published in the Company’s data privacy policies and information notices specific to the various applications, to ensure that data subjects can exercise their rights and/or lodge complaints.

The Company protects those who speak up and raise concerns appropriately and in good faith. The Company does not retaliate against anyone who raises a concern, or against those who assist in investigations of suspected violations.

Policies and procedures

In 2021, the Company continued maintaining its policies and procedures framework, issuing a guidance on third parties categorisation, the compliance block list and translating the Code of Conduct in seven additional languages to maximise the reach of this foundational document. All policies and guidelines are made available to employees on the Intranet, and classroom training is delivered to employees who are particularly exposed to the underlying risks as described above.

On the Export Control side, the Company created an Export Control Compliance programme in early 2020 and has launched the cascade of its Export Control requirements through nine directives and methods throughout the Company. The cascade triggers an update of the relevant business processes and is targeted to be completed early 2022.

Under the terms of the Consent Agreement with the US Department of State (DoS) made public on 31 January 2020, the DoS agreed to settle all civil violations of the ITAR outlined in the Company’s voluntary disclosures identified in the Consent Agreement, and the Company agreed to retain an independent Special Compliance Officer (SCO), who is monitoring the effectiveness of the Company’s compliance with the ITAR for a duration of three years. In 2021, as required under the Consent Agreement, an audit of the Company’s ITAR compliance programme was undertaken by external counsel. For further

information, please refer to “Notes to the IFRS Consolidated Financial Statements – Note 38: Litigation and Claims (Investigation by the UK SFO, France’s PNF, US Departments of State and Justice and Related Commercial Litigation)”

Responsible Lobbying Charter

The Company is committed to ensuring that any lobbying activity is undertaken in compliance with all applicable laws and its anti-corruption programme. During 2021, the Company launched a Responsible Lobbying Charter (link in table above) aimed at anybody who engages with public officials in any capacity, including third party representatives retained by the Company. The charter outlines the Airbus core principles for responsible lobbying and brings together the key Airbus codes and directives relevant to this topic. The principles are also reinforced by a training module available to all employees.

V. Outlook

An effective Ethics & Compliance programme is one that, by definition, continuously adapts to changes and improves over time. Going forward, the Company will continue to assess its risks and monitor and test the implementation of mitigation measures at all levels: corporate level, Divisions, regions and local entities.

When misconduct reveals a gap in compliance policies, procedures or tools, the Company undertakes revisions to its Ethics & Compliance programme commensurate with the wrongdoing and in light of lessons learned. While compliance at the Company will therefore always be a work in progress, the Company is committed to this endeavour, as it aims to make its Ethics & Compliance programme sustainable over time.

6.1.6 RESPONSIBLE SUPPLY CHAIN

I. Introduction

At the end of 2020, approximately 21,000 suppliers from more than 80 countries supply parts, components, systems and services to the Company.

In 2020, the overall external sourcing volume of the Company was valued at around €41 billion and shared between Divisions with 76% for the Company’s commercial aircraft business, 15% for the Company’s Defence and Space Division and 8% for the Company’s Helicopters Division.

Whilst the Company’s products and services are sold all over the world, the majority of its supply chain is based in Europe and OECD countries. However, in the past few years, the supply chain has become concentrated and more international. In addition, and due to increasing consolidation within the aerospace and defence sector, larger work packages are being placed with a smaller number of lead suppliers.

Also, Airbus regionally supports Small and Medium Enterprises to contribute to its supply chain, particularly through tier one lead suppliers.

The Company’s global sourcing footprint is represented as follows based on Tier1 and sub tiers, based on 2020 Airbus International Footprint data (formerly known as value chain analysis, VCA):

To promote further globalisation of its sourcing footprint, the Company has established regional procurement offices in North America (Washington, DC), India (Bangalore), Asia Pacific (Singapore) and China (Beijing). For the regional sourcing of indirect goods and services, the Airbus General Procurement function is represented in the regional procurement offices. As the Company's commercial aircraft business and its two Divisions are certified ISO14001, the Procurement function acts in adherence with ISO 14001 requirements.

RESPONSIBLE SUPPLY CHAIN	GRI	SASB	SDGs	Others	
	102-9 Supply Chain 204 Procurement Practices 308 Supplier Environmental Assessment 408 Child Labor 409 Forced or Compulsory Labor 414 Supplier Social Assessment	Materials Sourcing	4, 5, 8, 9, 12, 13, 16, 17	Vigilance Plan

----------------------	--

II. Governance

The Company strives to make environmental and social responsibility a core element of its procurement strategy. This includes managing the relationships with suppliers throughout the sourcing strategy, supplier selection, contract management, supplier monitoring and development. The Company's suppliers must comply with all applicable laws and regulations. In addition, all business shall be conducted by suppliers in compliance with the principles of the Company's Supplier Code of Conduct, which is the document of reference for the Company's responsible supplier management. This Supplier Code of Conduct represents the group-wide values and principles in line with internationally recognised standards and conventions (such as OECD and ILO).

In 2021, the Sustainable Supply Chain Roadmap (SSCR) steering committee validated the supply chain sustainability ambition: to engage and commit our supply chain around Airbus' principles and core values. It translates into four main priorities for a more sustainable supply chain.

- Lead towards clean aerospace, reflected in the decarbonisation of our supply chain, as well as transparency on substances in products and processes.
- Respect human rights and foster inclusion through zero tolerance for forced labour and use of conflict minerals.
- Build our business on the foundation of safety and quality, by spreading the culture of product safety to key suppliers and requiring a safe workplace environment for suppliers' employees.
- Exemplify business integrity expressed thanks to zero tolerance for corruption and screen and approve all our suppliers (see " – 6.1.5 Exemplify Business Integrity").

Those priorities are consistent with the most material topics identified in the Airbus supply chain.

Concrete sustainability targets have been included in the 2021 objectives of the Chief Procurement Officer of Airbus commercial and all direct reports. This includes the deployment of the Supplier Code of Conduct for 50% of the Company spend, the evaluation of all suppliers identified as having sustainability risks, and the assessment of the supplier strategy on climate change for 50% of the Company spend.

The SSCR reports to a steering committee chaired by the Head of Sustainability & Environment, and the Head of Procurement Transformation & Central Services. The steering committee includes the representative of the Chief Procurement Officer of Airbus Commercial and the Chief Procurement Officers of Airbus Helicopters and of Airbus Defence & Space, as well as the Head of Health & Safety, the Head of Product Safety and the Head of Ethics & Compliance, or their nominated representatives. The Executive Vice President Communication and Corporate Affairs and the Chief Procurement Officer of the Company act as sponsors of the SSCR. In addition, the Head of Procurement Transformation & Central Services is part of the procurement leadership team (PLT) and is responsible for facilitating the communication on sustainability activities between the SSCR and the PLT on a regular basis.

The Chief Procurement Officer of Airbus also reports to the ECSC on the progress of Airbus responsible sourcing strategy implementation.

All sustainability activities in the supply chain are based on the following key elements and principles of due diligence following the OECD Due Diligence Guidance for Responsible Business Conduct:

- supply base risk mapping;
- supplier engagement and contractual requirements;
- supplier assessment/audits and development plans;
- policies, tools and reporting.

For any anti-corruption topics in the supply chain, the Procurement function cooperates closely with the Legal & Compliance department.

III. Risk management

The Company's direct procurement-related risks are embedded into the Company's ERM system. A specific risk category regarding sustainability-related risks in the supply chain has been integrated into the risk management plan.

Airbus SE / 2021 Board Report 116

1. Regulatory non-compliance

The Company may not receive sufficient visibility and information from its supply chain in regards to compliance with environmental, human rights, health & safety laws and regulations. In the event of an industrial accident or other serious incident in the supply chain, or any problems of the supplier to fulfill its operational or product compliance, this may also have a significant adverse effect on the reputation of the Company and its products and services. The Company's reputation may also be affected by the public perception of social and/or environmental impacts of its supply chain's industrial operations on local environments, communities, biodiversity and the general public's health.

2. Supplier's impact on local environment

From the extraction of raw materials to the manufacturing of parts delivered to the Company, a supplier's industrial operations may have significant adverse environmental impacts on the local environment where the activity is performed, with possible impacts on air, water, soil, biodiversity, workers' occupational health and safety, on the health of the general public, on the land rights of the local or indigenous communities and on forced & child labour.

3. Disruption risk

In the event that a supplier fails to comply with environmental, human/labour rights, health and safety laws and regulations, even if caused by factors beyond its control, that failure may result in the levying of civil or criminal penalties and fines against the supplier. Regulatory authorities may require them to conduct investigations and undertake remedial activities, curtail operations or close installations or facilities temporarily to prevent imminent risks.

In response to the above 1. to 3., the Company deploys responsible sourcing activities and specific supplier due diligence actions in the frame of the SSCR.

4. Risk of product non-compliance

The various products manufactured and sold by suppliers must, as a minimum, comply with applicable environmental, human/labour rights, health and safety laws and regulations, for example those covering substances and product composition. Even if a supplier seeks to ensure that its products meet the highest quality standards, increasingly stringent and complex laws and regulations, new scientific discoveries, delivery of defective products or the obligation to notify or provide regulatory authorities or others with required information (such as under the REACH regulation) may force it to adapt, redesign, redevelop, recertify and/or remove its products from the market. Seizures of defective products may be pronounced and could prevent delivery to the Company.

In response, a Procurement Task Force has been established to ensure group-wide governance for supplier management and assessment of chemical regulations and obsolescence impact. This task force also coordinates communication to suppliers on substance issues and on substitution solutions qualified by the Company.

IV. Implementation / activities: Airbus Supplier Vigilance Plan

1. Supply base risk mapping

Sustainability compliance risks

Since 2018, the Procurement Responsibility & Sustainability department has carried out proactive social risk mapping in line with international guidance, internal commodity expertise and externally available country indices. In 2021, with the support of external advisors, Airbus upgraded its risk mapping methodology building on risk indexes considering the location and the type of activity performed by the suppliers and delivering an on-going and up to date risk assessment. This risk mapping will be incorporated in 2022 into the Company's supply chain management tools to provide visibility of those risks to the whole procurement organisation.

Number of business-relevant external risk suppliers identified in 2021 (including tier ones and lower tiers)

Based on the Company's active supply base and new suppliers identified as possible future partners, 837 suppliers were identified as possible risky suppliers. After business impact and business strategy analysis, 412 suppliers were confirmed as high risk in 2019. In 2021, analysis was updated in consideration of business context evolution, leading to 395 business-relevant high risk suppliers.

2. Supplier assessment / audit and development

Since 2019, the Company has worked with external expert companies to conduct sustainability-related, evidence based desktop assessments and specific on-site audits. The assessments cover social compliance criteria such as human rights, labour practices, health & safety and anti-corruption as well as environmental regulations and sustainability criteria based on an environmental questionnaire developed by IAEG. At the end of 2020, 63% of the suppliers identified as high risk

Airbus SE / 2021 Board Report 117

following the Company's 2019 risk mapping methodology have completed an evidence based desktop assessment. In 2021, the rate of risky suppliers assessed has increased to 95% compared to a target set at 100%.

The progress and results of those assessments have been communicated during events with suppliers and engagement took place with all suppliers presenting findings.

Of the 95% of suppliers completing an assessment, 13% of which (53) have at least one red flag (mainly linked to environmental issues). In 2021, the Company has started to engage on the results asking those suppliers to complete action plans to close any finding.

During 2021, the Company reviewed the self-assessment questionnaire and assessment grid to ensure that a) they are fit for purpose, b) that critical issues are identified and c) there is more efficient completion. Proposed changes include adapting the questions, particularly on environmental topics, to take into account the size of supplier (e.g. feedback has told us that smaller suppliers don't necessarily have the resources to complete such a demanding questionnaire) and to the assessment grid to identify critical issues, particularly with regard to human rights and health & safety. In addition, the Company is currently reviewing its relationship with suppliers who refuse to participate in its assessment programme.

Specifically on environmental matters, the Company further fostered REACH awareness in the supply chain and engaged with suppliers to accelerate the substitution and manage the use of the most hazardous substances. In particular, regarding the REACH EHS readiness of suppliers, the Company focused on:

- engagement with 238 in-situ suppliers through webinars and supplier conferences to develop their readiness to comply with enhanced REACH EHS conditions when working on the Company's sites. Further direct exchanges with the Company's EHS experts has been organised with 42% of them;
- evaluation of the maturity of external suppliers in the Company qualified processes in regards to the future enhanced protection requirements that are being defined by the European Commission:
- out of 357 suppliers of the Company qualified processes using chromates in industrial operations, the 96 most impacting suppliers have been assessed on-site by a third party on behalf of the Company. The Company engaged with those suppliers, which revealed findings and requested them to demonstrate and launch action plans for improvement. By end of 2021, all the suppliers have either a comprehensive action plan or successfully closed the major findings.

In 2019, the Company introduced supplier factory visits called "the Gemba Walk" pocketbook, applicable to commercial aircraft activities, which is a practical and visual guide for the Company's employees when visiting the shop floor of a supplier, supporting the identification and reporting of risks or improvement opportunities observed during factory visits. A dedicated pocketbook covering environment, health & safety and human rights risks was also developed in 2019 and published on the Airbus intranet. Unfortunately, restrictions put in place since 2020 due to COVID-19 significantly reduced the effectiveness of identifying risks through supplier shop floor visits.

3. Supplier engagement

Contractual requirements

The Company's standard procurement contract templates have evolved over the last few years to reinforce clauses relating to sustainability and environment which require suppliers to:

- comply with all applicable laws and regulations relating to production, products and services;
- provide information on substances used in manufacturing processes and contained in the product itself (covering both hazardous substances and conflict minerals);

life cycle (including waste management), health & safety matters such as safe usage and management of products across its – implement an Environmental Management System based on ISO 14001 or equivalent;

- comply with the Company's anti-corruption and bribery requirements; and
- commit to apply and cascade across its supply chain the principles of the Company's Supplier Code of Conduct, including with regard to environment, human rights, labour practices, responsible sourcing of minerals and anti-corruption. In addition, since 2020, the Company's Defence and Space Division implemented criteria on sustainability in the call-for-tender procurement process. Only those suppliers which meet criteria, including in particular agreement to comply with the Company's Supplier Code of Conduct, can continue with the call for tender procurement process. Positive answers to additional criteria, such as commitment to the SDGs, sustainable projects, life-cycle assessment, waste and packaging reduction, will prioritise suppliers for further selection. It has been agreed that this approach will be extended to the whole Company in January 2022.

In 2021, the SSCR steering committee agreed to anchor sustainability requirements into the Company's procurement processes. This will be implemented in 2022 and will include an obligation to get confirmation from suppliers to apply and cascade our sustainability principles and environmental requirements. It also includes the agreement from suppliers to

Airbus SE / 2021 Board Report 118

regularly fulfil the evidence-based assessment on sustainability and for our most important suppliers to be transparent about their climate change strategy. This will ultimately require suppliers to cooperate when a sustainability risk is identified, including with deep diving in the supplier's supply chain, and require Airbus to take advantage of supplier visits to evaluate operational sustainability management.

In 2020, the process to obtain a commitment from the Company's suppliers to apply the principles of the Company's Supplier Code of Conduct was reviewed. During 2021, 79% of the Company's sourcing volume had committed to its principles (based on a target of 50% in 2021 and 80% by 2022).

In 2021, the Annual Supplier Conference for the Company's commercial aircraft business took place virtually and sustainability was part of the discussions. Three of the Company's suppliers were nominated for the Sustainability Award, which was awarded to *Dynatomic Technologies* for creating a safe working environment for employees, suppliers and customers whilst at the same time helping society by developing low cost ventilators. For the first time, Airbus Defence and Space awarded a supplier for outstanding sustainable behaviour during its supplier conference 2021. Premium AEROTEC GmbH was awarded for its good transparency with regards to chemical substance traceability (REACH), for the extensive collaboration during EHS audits and the immediate implementation of all improvement recommendations.

However, on top of this annual event, discussions with suppliers on sustainability continued during various supplier meetings or virtual supplier conferences for specific commodities.

4. Training & awareness

Throughout 2021, the Procurement Responsibility & Sustainability department supported both internal awareness sessions and workshops as well as external supplier meetings on sustainability topics in the supply chain. The Company's internal Procurement Academy provides training on core competencies and skills to develop procurement expertise and prepare employees within the Procurement department for the challenges of the future. Sustainability modules are embedded in Procurement's newcomer induction path and manager development programme. This training targets supply chain quality managers, ordering officers and buyers.

Additional means have been developed in 2021:

- A toolkit was developed presenting the sustainable supply chain roadmap. It is built around three main chapters:
 - The first chapter focuses on Airbus' ambition for sustainability at the group level, with its four commitments around the environment, human rights, health & product safety and business integrity.
 - The second one, more specifically, concerns the sustainable supply chain, its ambitions and priorities. The three-step approach has also been developed, which consists of commitment, assessment and engagement & development of suppliers.
 - The third chapter focuses on the initiatives detailed earlier in this report: Airbus Supplier Code of Conduct, Supplier Sustainability Assessment – notably led by Intertek –, the decarbonisation of the Supply Chain – including CDP targets –, data transparency in products and processes, product safety and business integrity. It gives a clear overview of the actions underway as part of the roadmap with tangible targets and ambitions. The purpose of this document is to raise general employee awareness and provide Procurement teams with the necessary visibility on related processes with suppliers. It also provides tangible figures and targets, and a better understanding of the sustainable supply chain roadmap. For the external audience (this toolkit has also been made available to suppliers in the Airbus suppliers portals), it aims to provide greater transparency into the Company's' values, initiatives and the direction it wants to take.
 - An internal website has been created to communicate Airbus' sustainability progress in the supply chain and to give a better understanding about the initiatives to Procurement teams.
- Two trainings will be developed in 2022: one aimed at increasing employee awareness of supply chain sustainability management, the other one intended to develop buyers' awareness of environmental clauses in contracts.

5. Grievance mechanism

From 2019, the Company's OpenLine has been accessible to external stakeholders, such as suppliers and their employees, as a secure and confidential channel through which they may, on a voluntary basis, raise alerts related to the Company in the areas of bribery, human rights, environment and health and safety. This medium is available through the Company's OpenLine website (www.airbusopenline.com) in 13 languages. For further information on OpenLine, see “– 6.1.5 Exemplify Business Integrity”. Access to this OpenLine has been reiterated in the updated Supplier Code of Conduct.

In addition to OpenLine, the Company's sustainable supply chain roadmap may receive alerts from other sources including through the supplier onboarding process, media or directly from employees. During 2021, the sustainable supply chain roadmap received alerts on 12 potential allegations relating to environment damages and human rights (forced labour and

Airbus SE / 2021 Board Report 119

land rights of the indigenous communities) in its supply chain. Analysis and/or investigations of those alerts have been completed or are in progress according to best practice developed by the Legal & Compliance team including:

- Initial review to determine if an investigation is needed,
- Investigation: prepare investigation plan, collect documentary evidence, and conduct interviews in a (confidential) and timely manner,
- Assessment: analyse information and documentation collected during the investigation, prepare an investigation report summarising the findings and propose remedial actions necessary to reasonably respond to and prevent the recurrence of the conduct, if any,
- Closing the investigation and reporting,
- Monitoring of the implementation of remedial actions.

6. Work with External Stakeholders

As mentioned under “Environment” in section 6.1.2, the Company is a founding member of IAEG, which is working on common aerospace industry standards and tools to manage environmental obligations. More specifically, for the supply chain, IAEG has developed:

- a supply chain environmental survey, which the Company implemented in 2019 and which will be used as environmental assessment module, as mentioned in section 2 above;
- an EMS implementation guideline to encourage a wider uptake of EMSs as appropriate for each supplier in a phased approach and cost effective, consistent and supportive manner;
- the definition of an Environmental Qualification Program to assess and develop the environmental maturity of suppliers.

Under Airbus leadership, the IAEG extended this qualification programme to other sustainability topics. Concretely, the IAEG terms of reference have been reviewed to allow such an extension, presentation by expert companies on supply chain risk assessment and management have been received, benchmark with the IAQG (International Aerospace Quality Group) has been performed and a request for information has been launched to build a sectoral approach for supplier engagement.

In December 2021, the IAEG Board of Directors approved the creation of a working group to develop an ESG supplier engagement programme.

As a co-founder of the International Forum on Business Ethical Conduct (“IFBEC”), the Company is supporting the application of global standards for business ethics and compliance. IFBEC members have established a Model Supplier Code of Conduct, which expresses the minimum ethical standards to be applied by suppliers throughout the aerospace and defence industries. It also encourages suppliers to go beyond legal compliance, drawing upon internationally recognised standards in order to advance in social and environmental responsibility and business ethics.

All suppliers will now be asked to sign a confirmation of compliance with the principles of the revised Supplier Code of Conduct (or to confirm their own practices are aligned with the principles set out in this code), and to cascade these principles throughout their own supply chains. The Company is committed to support suppliers, where necessary, to improve their own human rights due diligence.

In October 2019, the Company joined the Responsible Business Alliance’s Responsible Mineral Initiative (“RMI”), in order to further enforce activities of responsible sourcing while applying industry standards for supplier due diligence and data management in accordance with the OECD framework.

7. Promoting disability-friendly companies

Since 2011, in France the Company has been promoting employment of disabled people by its suppliers. This includes a request for relevant bidding suppliers to propose a partnership with disability-friendly companies during the call for tender process. In 2020, the Company’s subcontracting activities have decreased due to the COVID-19 crisis. This decrease also affected disability-friendly companies, but the Company has been committed to support them during the crisis. In 2020, the global volume of business with disability-friendly companies in France was around €40 million, which represents minus 20% compared to 2019 figures. However this number has been multiplied by five for the last ten years and the ambition is to reach around €100 million in 2025, by developing contracts in engineering and IT services thanks to the Digital Consortium (composed of 65 French disability-friendly companies). At the end of 2021, around 60 disability-friendly companies are working with the Company. In November 2021, the Company organised a (Dis)Ability Forum in Toulouse with 35 disability-friendly companies and 150 participants. In 2022, depending on the sanitary crisis, (Dis)Ability Forums could also be organised in Spain and Germany.

8. Responsible mineral sourcing

The Company places great importance on the responsible sourcing of materials used in manufacturing. Some minerals including 3TG (tin, tungsten, tantalum and gold) are necessary for the proper functioning of components within its products. The Company largely does not directly import minerals but these minerals are found in certain products the Company procures. In that context, the Company requires all suppliers to comply with applicable laws and regulations on conflict minerals, including any 3TG conflict minerals. To outline the Company’s commitment to responsible business, the Responsible Mineral Policy was released in 2019, which details its engagement to improve safety and human rights conditions in the mineral supply chains. As introduced in §6. *Work with External Stakeholders*, the company will benefit from the RMI experience and available audits, tools and standardised ways of working. The Company is also monitoring developments at the European Commission on critical raw materials (CRM) and is investigating the possibilities to take a deeper look at its related supply chain, through direct involvement and/or trade associations. The update of the Supplier Code of Conduct (available since Q1 2021) also requires suppliers to pay more attention to CRM responsible sourcing. The new Supplier Code of Conduct formally requires suppliers to establish a policy and a management system to assure that critical raw materials are sourced responsibly. For the small portion of direct procurement of minerals in the Company’s

Defence and Space Division in Germany has established a dedicated Conflict Minerals Management System, which on the importation of 3TG. For this small portion of direct import, the Defence and Space Division is proactively asking suppliers to disclose proof of responsible sourcing and is cross-checking this data with third parties audits available through the RMI trade association.

9. Plastic-free supply chain

Based on the SDGs, specifically SDG 12 (responsible consumption and production), a plastic-free supply chain project was launched in 2019 within the Company's Defence and Space Division, with the aim of reducing, reusing and recycling plastic waste and packaging in the Division's scope of involvement by 2025 (for example, production/maintenance, logistics, offices and supply). As a result of this project, Airbus Defence and Space defined for the first time a single-use plastic reduction total cost of ownership of 5% for the production area. Due to the implementation of plastic-free packaging alternatives, a 14% reduction of single use plastic in the logistics area of all Airbus Defence and Space sites has been achieved for 2021, corresponding to 127 991m² of single-use plastic replacement based on inventory done. In addition to this great achievement in logistics, plastic-free alternatives have been tested in the clean rooms of Toulouse-Labege and in the production and maintenance areas in Manching.

By the inclusion of the packaging paragraph in the new Supplier Code of Conduct and by the inclusion of single use plastic clauses in some contractual requirements, we aim to move progressively from the current take-make-waste extractive industrial model to a circular economy approach towards a sustainable way to use plastic.

10. CO₂ emissions

During 2021, the Company engaged with its top suppliers by requesting them to respond to the CDP climate change questionnaire. 169 of the Company's top suppliers, covering 80% of the Company's sourcing volume, were contacted and 121 suppliers have completed the CDP questionnaire (68% in spent). The results from this questionnaire will allow the Company to identify supplier strengths and potential areas of improvement and to engage with non-responsive suppliers in order to improve the response rate in 2022. Next year the Company plans to get responses from 75% in spent of the Company's supply chain.

In 2021, 53% of responding suppliers received an A or B score, representing 61 suppliers. In 2020, 56% of the responding suppliers had received an A or B score representing 25 suppliers. The Company plans to request an improvement plan from suppliers with identified weaknesses and aims to define cooperation activities with suppliers that have already reached an A score. In the years to come, the Company will be able to provide measures and analyses on how the scoring is improving.

The Company also evaluated the carbon footprint of its supply chain, by applying the methodology developed by the IAEG. For further details, see " – 6.1.2. Lead the journey towards clean aerospace".

V. Outlook

The sustainable supply chain roadmap will evolve to actively mitigate sustainability risks in the supply chain, adapt to evolving sustainability requirements and support the Company's ambition to be more sustainable.

Actions to be progressed during 2022 include:

- the formalisation and reinforcement of the process to collect sustainability-related alerts, the management of those alerts, the engagement with external stakeholders, as well as the communication and reporting on the effectiveness of our actions.

This action has been launched into consideration the analysis of the Company's supply chain due diligence performed in 2021 and the German act on supply chain due diligence.

- reinforcing the adherence of the Company's Supplier Code of Conduct principles throughout the Company's supply base;
- extending the scope of supplier sustainability assessments by requesting new suppliers to perform such an assessment and by extending to existing contracts in order to reach 80% of the spend volume in 2025;
- engaging with target suppliers based on supplier assessment outcome, and developing action plans when required;
- further integrating sustainability elements into procurement processes;
- developing specific training modules on sustainability and other solutions to support internal awareness in purchasing commodities. This will include awareness on the Company's new Supplier Code of Conduct;
- the deployment of a digital solution to further enhance the collection of data from suppliers on conflict minerals, critical materials and regulated substances in the products delivered to the Company.

Regarding environmental sustainability and substance management, the Company will focus on the following in 2022:

- engaging and discussing with key CO₂ contributors in its supply chain, leveraging the CDP to identify opportunities to improve their climate change management and reduce emissions.

Cooperating with equipment suppliers to better assess the environmental impact of the Company's products, improve the Company's ecodesign practices and drive supplier innovations that mitigate their products' impact over their entire lifecycle.

6.1.7 COMMUNITY IMPACT

I. Introduction

Airbus strives to support vulnerable communities and young people throughout the world where it operates and beyond by mobilising its products, services and employees focusing on equitable and measurable solutions, in line with the Company Purpose.

Community Impact	GRI	SDGs
	413 Local communities	All 17 SDGs, with focus on 1,2,3,4,5,13 and 17
Highest governance body(ies) involved	Board of Directors / ECSC Airbus Foundation Board of Directors	
Related Corporate Reference Documents	Directive on Sponsorships, Donations & Corporate Membership, the Bylaws of the Airbus Corporate Foundation and the Airbus Foundation Endowment Fund. Upcoming: Community Impact framework.	
Key metrics	2020	2021

Number of Sustainability Ambassadors	0	207
--------------------------------------	---	-----

Add resources [Community engagement on Airbus.com](#), [The Airbus Foundation](#), [Supporting Education](#)

II. Governance

The Sustainability - Develop & Engage department manages the global strategy and framework for community impact at Airbus and supports the operations of the Airbus Foundation. A global network of community impact focal points representing France, Germany, Spain, the UK, the Americas, India, China, Asia Pacific and the Divisions has been established, as well as a committee of specific topic experts who provide guidance, assessment and recommendations according to the community impact priority themes. Additionally, the Company's voluntary network of Sustainability Ambassadors has been launched and these passionate employees are key for helping raise awareness of and championing sustainability and community impact initiatives. Launched in June 2021, this network currently has over 200 members onboarded, representing 19 sites in Europe, China, and the US. At a business level, there are standard reporting lines to the Sustainability & Environment organisation with top level oversight provided by the ECSC at the Company's Board of Director level.

The Airbus Foundation and Airbus Foundation Endowment Funds are registered as non-profit entities of general interest under French law, with specific articles of association that define their respective mission and remit. Their strategy and

Airbus SE / 2021 Board Report 122

operations are led by the Managing Director and each entity has formal governance with its own Board of Directors. The Airbus Foundation Board of Directors is chaired by Julie Kitcher, EVP Communication & Corporate Affairs and comprises membership from across the Company including:

- Thierry Baril, Chief HR and Workplace Officer
- Bruno Even, CEO Airbus Helicopters
- Michael Schoelhorn, CEO Airbus Defence & Space
- Amparo Moraleda, Representative of the Company's Board of Directors

Additionally the Board comprises employee representatives and external experts.

The Airbus Foundation and Airbus Foundation Endowment Fund annual reports and accounts are submitted annually to the French authorities.

III. Implementation / activities

As the world faces this challenging era, it is critical for the Company and its employees around the world to unite to address the growing societal challenges and invest in developing the future generation.

Supporting vulnerable communities

During 2021, focus continued on supporting vulnerable communities through disaster response, innovation or fundraising to tackle topics such as poverty, hunger and healthcare. In the Asia Pacific region, the fight against COVID-19 continued through several cross-divisional initiatives to deliver medical equipment and supplies to healthcare systems in Indonesia, Malaysia, the Philippines, Thailand and Vietnam. Wherever possible, the equipment and supplies were sourced locally and reacted to local needs, with the donations arranged by the teams based in the region. Airbus India responded to the COVID-19 crisis by procuring and delivering more than 36 tonnes of medical equipment to the Indian Red Cross Society, including oxygen plants and mobile intensive care units, and deploying humanitarian flights to transport supplies from abroad. In the Americas, employees from all Divisions participated in a four-month virtual, inter-site competition. The *Airbus End Hunger Games* competition raised funds to benefit non-profit organisations fighting child hunger and located across the US, Canada and Latin America. Beneficiary organisations included Feed the Children, World Central Kitchen, Food Banks Canada, Nutre a un Niño, Da Rua and TECHO. Along the same theme of fighting hunger in vulnerable communities, employees in Seville donated more than 1,200 kg of basic supplies to the Seville Food Bank Foundation.

The Airbus Foundation, the Company's philanthropic arm, also continued to support its partners in COVID-19 and disaster response by coordinating humanitarian flights carrying more than 16 tonnes of aid to the Ivory Coast, Uganda and Nepal. Additionally, 110 helicopter flight hours were chartered in Chile and Papua New Guinea to support communities impacted by COVID-19, and in Haiti to conduct aerial assessment following the earthquake in 2021. The Airbus Foundation also responded to over 80 satellite imagery requests from partners representing around 43,000 km² for disaster assessment and response plans. In addition, a bespoke satellite imagery training session was provided to Action Against Hunger to increase their capacity in satellite imagery analysis and interpretation.

The Airbus Foundation also participated in the Action Against Hunger (AAH) global wellbeing challenge 'Connected Against Hunger'. During four weeks, over 600 Airbus employees collectively walked, ran and cycled more than 182,000 kilometres to raise funds to contribute to the work of AAH.

Supporting the future generation

Young people are the lifeblood of our future and of society. It is crucial that we inspire and engage young people, particularly by playing an active role in fostering inclusion, diversity and community values at an early age. The Company continued to offer support through mentorship and education to enable students to develop the creativity, innovation, leadership and critical thinking skills that will serve them well in the future and help them to tackle their communities' challenges.

Specific actions ranged from the provision of 40 scholarships from Airbus Canada at McGill and Polytechnique Montréal (10 scholarships per year for four years), to online and offline classes across five cities in China reaching 3,000 students, plus a mentorship and funding scheme supporting around 40 university students in China who were struggling economically.

Bringing science to life in the classroom, the employee-led initiative, Humanity Lab, developed an educational wind-tunnel for use in schools in Africa, prioritising low-cost designs with components that could easily be sourced or 3D printed locally. Since 2018, Humanity Lab projects have been supported by more than 150 committed employee volunteers to innovate solutions for disability, environment, education or humanitarian issues.

The Airbus Foundation has enriched its STEM (Science, Technology, Engineering and Mathematics) digital platform - The Airbus Foundation Discovery Space (AFDS) - with new educational videos and activities to support its youth programmes across 17 countries in Europe, Africa, Asia, and the Americas. In 2021, the programmes involved over 400 volunteers and directly reached around 4,700 young students. The fourth edition of the AFDS Moon Camp Challenge built on the success of previous years with 1,823 projects submitted from 53 countries by over 4,100 students and supported by over 600 teachers.

Protecting the future of our planet

2021 saw a multitude of employee-led initiatives aimed at positive environmental action. Employees from several countries including China, Spain, Germany, France and the UK volunteered in projects organised in partnership with local infrastructure organisations to support activities such as local waste cleanup and tree planting.

In addition to its long running humanitarian response and youth development actions, in 2021 the Airbus Foundation launched the development of a third pillar focusing on nature preservation and minimising the environmental impact of humans. As part of its pilot phase, the Airbus Foundation joined forces with the Connected Conservation Foundation in a new partnership that aims to help preserve wildlife and natural ecosystems through shared technologies and resources. Under the agreement, Airbus' high-resolution satellite imagery is being provided and teams are working together with the Connected Conservation Foundation's on-the-ground digital technologies to help recover populations of threatened species and stop habitat degradation. The partnership's first project is focusing on novel approaches, using artificial intelligence to search high-resolution imagery pixel by pixel to detect large animals in Madikwe, South Africa and in Northern Rangelands Trust conservancies in northern Kenya.

V. Outlook

In order to strengthen the Company's collective approach to community impact, a new global framework is in development to be launched early 2022. Aiming to bring together the various business and philanthropic channels for community impact under a common direction, the framework will focus on sustainable, equitable and measurable initiatives focused on three pillars: advancing the support to vulnerable communities, the development of the future generation and protecting the future of our planet.

As part of the development of the community impact framework, 23 pilot projects have been selected from across 19 countries with a focus on contribution to the priority themes, ensuring community involvement in the identification of needs and solutions, and embedding impact requirements to ensure that the projects achieve positive, lasting impact for beneficiaries and communities. The outcomes of these projects will contribute to the definition of our impact measurement in 2022.

In addition, to support the framework and encourage employee engagement, Airbus, in cooperation with the Airbus Foundation, will deploy a new digital platform in early 2022 that facilitates a direct connection with almost two million community causes around the world.

Scope: Reported data covers 84 sites. Airbus environmental reporting guidelines include sites worldwide with a workforce on-site higher or equal to 100 employees. Note that only 100% consolidated entities are taken into account with the exception of ATR and Tianjin operations. 2015-2020 figures were refined to reflect the above changes in scope, to align with GHG protocol guidelines (past year adjustments) and to rectify actuals for some entities.

✓: 2021 data audited by EY. * Energy: Electricity, Heat and Steam joint verification.

Notes: (1) Scope 1 emissions restated to include Oversize transport emissions (large and non standard shipments via Road, River and Sea), previously considered as Scope 3 based on operational control criteria as per GHG protocol guidelines. (2) Scope 2: location based with purchased guarantees of origin deduced. (3) Worldwide air travels of Europe-based employees. (4) previous years restated to take into account refined emission factors. (5) 2021 VOC emissions data is estimated. 2021 actuals will be consolidated in April 2022. (6) Proportion of total water withdrawal corresponding to the withdrawals from areas identified with high or extremely high water stress. Water stress level as defined per the Aqueduct Water Risk Atlas (medium scenario for 2030). (7) Hazardous waste: waste displays one or more of the hazardous properties listed: "Explosive", "Oxidising", "Highly flammable", "Flammable", "Irritant", "Harmful", "Toxic", "Carcinogenic", "Corrosive", "Infectious", "Toxic for reproduction", "Mutagenic", "Sensitizing", "Ecotoxic", "Pressurised gas". (8) Material recovery: any operation wherein products, components of products, or materials that have become waste are prepared to fulfill a purpose in place of new products, components, or materials that would otherwise have been used for that purpose. 2021 material and energy recovery rates will be refined when final waste treatment information will be provided by waste collector companies. (9) Newly reported metric. Previous coverage ratio excluded entities not subject to the environmental reporting guidelines (see above).

6.1.9 DEPLOYMENT OF VIGILANCE PLAN (DEVOIR DE VIGILANCE)

The Company's Vigilance Plan is embedded in its comprehensive approach to sustainability. This section gathers key information highlighting the Vigilance Plan's deployment status and provides further granularity to the "materiality matrix" risk assessment, on the topics of environment, health and safety, human rights and fundamental freedoms. While this section provides an overview of performance measurement and analysis as well as controls and processes, further descriptive elements including implementation progress can be found in the respective *material topic* sections.

1- Risk mapping

	Priority risk in the scope of the Company and its subsidiaries	Priority risk in the scope of Suppliers and Contractors

3- Prevention and mitigation actions

The table below summarises transversal mitigation/ preventive actions. Specific relevant complementary actions are

detailed in the respective *material topic* sections.

	The Company and its subsidiaries				Suppliers and Contractors		
	Training	Whistleblowing system	Code of Conduct	Policies / directives	Contractual terms and conditions	Whistleblowing system	Supplier Code of Conduct
Environment	☑	☑	☑	☑	☑	☑	☑
Health and Safety	☑	☑	☑	☑	☑	☑	☑
Human Rights & Fundamental Freedoms	☑	☑	☑	☑	☑	☑	☑

4- Alert mechanism

The Company's **OpenLine** mechanism is introduced in " – 6.1.1 The Company's Approach to Sustainability" and described in more detail in " – 6.1.5 Exemplify Business Integrity".

5- Monitoring system

The table below shows an overview of the monitoring system in place. More detailed descriptions as well as performance measures and analysis can be found in the respective *material topic* sections.

	KPIs	Responsible organisation body	Supervisory Committee	Controls
Environment Operations Use of Products	CO ₂ Scope 1, 2, Water, Waste CO ₂ Scope 3	Industrial roadmap Aviation roadmap		Internal audit
Health and Safety	Lost time injury frequency rate	Executive level review	ECSC	ERM, internal audit
Human Rights & Fundamental Freedoms	Nb of social assessments % of findings closed within 18 months	Human Rights Roadmap		Site social assessments and supply chain assessments
Supply Chain	% suppliers at risk % action plan launched	Sustainable Supply Chain Roadmap		Audits Self questionnaires

Airbus SE / 2021 Board Report 130

6.1.10 EU TAXONOMY DISCLOSURE

The EU Taxonomy is a classification system establishing a list of environmentally sustainable economic activities by defining technical screening criteria for the six environmental objectives defined by the EU Taxonomy, as well as disclosure requirements for corporations. It aims to direct investments towards sustainable projects and activities in order to meet the EU's climate and energy targets for 2030 and reach the objectives of the European green deal.

Recommendations for technical screening criteria were published in August 2021 (Annex to the draft report by the Platform on Sustainable Finance on preliminary recommendations for technical screening criteria for the EU taxonomy). Based on this report, the proposed inclusion of aviation in the EU Taxonomy acknowledges its potential to transition to low carbon activities, through a number of measures including a "best-in-class" approach: in the short term, aging fleet renewal by Airbus' latest generation aircraft is recognised as having a significant potential for CO₂ reductions. The Company roadmap to decarbonisation is aligned with the taxonomy approach, as explained below.

Estimated eligibility and alignment if aviation-related technical screening criteria were to be adopted as per draft recommendation:

Aviation-related criteria are expected to be included in the Taxonomy in 2022. According to the published recommendations for technical screening criteria, a majority of the Company's 2021 turnover would be eligible, mainly including the turnover generated by sales of commercial aircraft. Based on the same information, the Company estimates that a significant portion of this eligible turnover could be taxonomy aligned, while meeting 'do-not-significant-harm' criteria and minimum safeguards. As per criteria recommendations, the alignment factor would correspond to the proportion of new aircraft sold that will replace less efficient older generation aircraft, and therefore contributing to reducing the overall carbon footprint of aviation. Activities from the Company's two Divisions may be covered to some extent in future developments of the Taxonomy, while current level of information available does not enable the Company to provide an estimate. Accordingly, 'best-in-class' aircraft programme related capital expenditures, and R&D (operating expenses) should be respectively eligible and aligned in similar proportions.

Under the proposed text available at the time of this report, Airbus commercial aircraft activity corresponding to NACE code 30.3 is described under section 8.9 Manufacturing of aircraft of the document "PLATFORM ON SUSTAINABLE FINANCE: TECHNICAL WORKING GROUP / PART B – Annex: Full list of Technical Screening Criteria August 2021" and therefore it could be considered an eligible activity once the corresponding delegated act is adopted.

Reported eligibility as per December 2021 adopted Delegated Act:

The Delegated Act covering Manufacturing of Commercial Aircraft technical screening criteria is expected to be adopted by the European Commission in 2022.

The Company performed an analysis of its exposure to Taxonomy-eligible activities referenced in the Climate Delegated Act adopted before 31 December 2021(1): Data-driven solutions for GHG emissions reductions, Renovation of existing buildings Construction of new buildings, Electricity generation using solar photovoltaic technology, Installation, maintenance and repair of renewable energy technologies, Freight transport services by road. The proportions of its turnover, capital expenditures and operating expenses as of 31 December 2021, as reported in the Financial Statements were assessed as

in material with operating expenses data, which includes certain limitations, mainly linked to the data available for capital reporting in upcoming disclosures.

As a result of this assessment, as of 31 December 2021, the Company reports 0% eligibility (100% non-eligibility) of its total turnover (52,149m€), capital expenditures (1,928m€), and operating expenses (R&D 2,746m€) respectively.

(1) COMMISSION DELEGATED REGULATION (EU) 2021/2139 of 4 June 2021 supplementing Regulation (EU) 2020/852 of the European Parliament and of the Council by establishing the technical screening criteria for determining the conditions under which an economic activity qualifies as contributing substantially to climate change mitigation or climate change adaptation and for determining whether that economic activity causes no significant harm to any of the other environmental objectives, published in the Official Journal of the European Union on 9 December 2021)

6.2 Other Corporate Activities

Digital and information management at Airbus, overview

The five years of digital transformation paved the way for Airbus to become an advanced digital company from the early design of its products to the digital services the Company is offering to its Customers.

The impact in 2020 and 2021 of the COVID-19 crisis highlighted the need for long-term resilience and business continuity. Digital has enabled new ways of working and flexibility, and continuously enhanced our industry. Putting in place strong and modern information management, cybersecurity, data governance and skills was the foundation for reaching this objective.

The five years of digital exploration, incubation and industrialisation have resulted in mature industrial-grade digital aviation platforms such as Skywise, Digital Design Manufacturing and Services, Artificial Intelligence, Advanced Analytics, Airline Sciences and Augmented Reality. These capabilities have been embedded into the Company's mainstream activities to create a seamless digital experience. This is vital for the production rate adaptation and also for deliveries.

Digitisation brought a wind of change in our mind-sets, and as the world evolves, the strategy does too, to push the boundaries on processes, people, products and services and to capture opportunities. This will further prepare the Company to embrace the challenges of delivering its programmes with highest flexibility, while laying the ground for a sustainable future.

Digitally enabled end-to-end processes

Digital design, manufacturing and services ("DDMS")

DDMS is a group-wide transformation programme aiming at creating a digital environment, where our future generation aerospace products, their industrial and support and services systems will be virtually designed and qualified in a connected way for greater speed, efficiency and quality.

It is enabled by the definition of collaborative business processes and data continuity across the entire programme lifecycle, the use of model-based system engineering, and the application of a flexible and modular architecture approach to the co-development of our products, industrial and support and services systems. Furthermore, digital twins will link the product, industrial and operational systems.

The mandate is to be launch-ready for the next aircraft programme, while securing early benefits by progressively deploying the developed processes and capabilities on early adopter programmes in all Divisions.

The major achievements this year were:

- **Single-Aisle Fit for Future:** Increased availability of 3D-configured Digital Mock Up (DMU), a sharp reduction in the lead-time for cabin and structure heads of version designs and improved quality have been demonstrated. Further, key steps have been made on the information system upgrade for the Single-Aisle programme with the development of lean product lifecycle management. The savings provided by the DDMS capabilities have already been factored into the operation planning for the upcoming years. Lastly, key contributions have been made to secure the solution development of the A321 XLR programme.
- **A350 Freighter:** Key contributions have been made to secure the opportunity of the programme with solutions such as new airframe sizing, system design, virtual testing and industrial assembly simulation capabilities.
- **Eurodrone and FCAS:** Major capabilities (including design and configuration management) have been delivered to secure the start of the programme for the Eurodrone. The common working environment has been delivered to the Eurodrone and the FCAS programmes, with a growing base of users and the connection with the extended enterprise.
- **H175, H225 and LH programmes:** Major contributions with the deployment of digital shop floor solutions in the frame of Meca 4.0 factory in line with the programme milestones.
- **ZeroE concept:** Delivery of the collaborative development logic for the early phases for the ZeroE concept. Several other capabilities have been delivered notably - System Of Systems (SOS) trades to ease early-stage fact and model-based decision making; industrial design space exploration capability to speed up the industrial architecture phase; top-down modular architecture and commonality policy to accelerate the product lines approach.

- Significant progress has also been made in terms of developing learning solutions and up-skilling teams working on all the above programmes, in order to ease the deployment of the new concepts, capabilities and ways of working.
- On the sustainability front, a digital model has been built to evaluate associated transition risks that might challenge the assumptions for our next generation of developments, such as evolution of travel demand or energy price and availability. This digital model has been recognised and adopted for open and shared development with key financial stakeholders in the OS-Climate consortium.

Airline Sciences

The aim of the Airline Sciences team is to provide an operational digital representation of an airline in all its complexities and business models. Having a bottom-up approach enables the Company to test out different aircraft technologies and concepts, validate product strategy, help out in sales campaigns, develop new services and, more importantly, understand the customers' perspective across all layers of the Company.

Against the backdrop of the ongoing COVID-19 crisis, and of the greater shift towards reducing aviation's global environmental footprint, the Airline Digital Twin capability was heavily used to assess CO₂ and non-CO₂ effects, including comprehensive emissions calculations as well as operational sensitivities around contrail avoidance.

Beyond the traditional emissions calculations, we have also started incorporating the predicted climate impact. This exploration will take several years, but is key in buttressing any future global climate impact legislation and key technologies development.

Finally, in the context of Aircraft Sales campaigns, the Airline Digital Twin was used in supporting Ultra-long-haul A350 studies for various potential customers. A comprehensive market assessment was carried out, including building an optimal airline fleet and product strategy to maximise airline profitability.

Artificial intelligence ("AI")

After successfully applying AI across the business domains, the Company is now accelerating and maturing its industrial setup to deliver AI at scale. This includes a focus on making available reusable and accessible core AI technology capabilities and patterns, to accelerate the time to market as well as increase the capacity to deliver AI products and services. These capabilities include:

- Computer vision to enable visual quality inspection and improve the safety and quality of our manufacturing environment,
- Pattern recognition and time series analysis to detect anomalies and avoid failure in our industrial machines and aircraft,
- Natural language understanding and processing to classify data (e.g. export control) and secure our compliance,
- Optimisation to improve scheduling and planning activities,
- Hybrid modelling through machine learning to build surrogate models of physical systems, accelerating design activities and increasing potential design space.

They are being complemented with a central governance and life cycle management of a wide range of operationalised artificial intelligence and decision models (ModelOps) framework which will further pave the way to ensure compliance with using AI in safety relevant systems in line with upcoming regulations.

Internet of Things ("IoT")

In 2021, the IoT platform has become the core standard industrial platform aiming at transforming any connected object data into a standardised, structured data-set, usable from any industrial application. A self-service dashboard has been created to allow any user to connect its objects and create its own data flow and alerting system.

The platform is ready to support hundreds of thousands of objects with industrially automated operations. Any industrial application in the DDMS landscape can then be developed using IoT data: track and trace (tracking objects), metering (getting sensors level), traceability (using RFID technology) or machine data (robots or industrial machines).

Virtual, augmented and mixed reality

The presence of mixed reality is increasing and will be used everywhere in our lives in the coming years. In 2021, we have prepared a common Airbus wide platform aiming to support use cases needing augmented or virtual reality. Augmented and virtual reality solutions are already implemented in Airbus Defence and Space, and Airbus Helicopters; they will be implemented in Airbus Commercial in 2022.

Airbus SE / 2021 Board Report 133

Augmented reality coupled with IoT and data flows, bringing contextualised data closer to the worker, will increase efficiency and product quality for the augmented worker.

Automation and robotics

In 2021, Digital & Information Management has created and formalised the necessary architecture foundations for an implementation of production robotics.

All data coming from the shop floor to Airbus Information Systems goes through the Airbus manufacturing integration layer before being transferred to manufacturing execution system (MES), IoT Platform or shop floor monitoring applications. This manufacturing integration layer is securing cyber security of operations, data safety and data integrity, along with additional features like data contextualization and edge computing covering high frequency data acquisition. It is providing a single

source of industrial automation data to all applications, and making ready for a harmonised and secure connection of production robotics.

Additionally, a test bench for autonomous guided vehicles (AGVs) was established in the industrial environment in order to allow the testing of AGVs in a robot-human interface, as well as the development of tracking solutions.

Cyber security

In 2021 we have seen a new step on the cyber security transformation journey with the introduction of the new management team and the growth of the internal team in Europe, as well as in India. Together, we have built on the great foundations that have been put in place over the last few years. We have introduced more structure, with the associated routines and rituals, but importantly more collaboration with the other information management domains, the other Airbus Divisions, the subsidiaries and affiliates and the corporate security teams. All of this will enable us to develop a greater cyber security capability right across Airbus. This year we achieved another increase in Cyber Security maturity, translated into an important reduction of the 16 high-level risks we use to track, report and prioritise.

We saw key extensions to the Security Operations Centre and remediated a further 68 critical systems. All supplier pool rooms were migrated to standard secure connections and 182 industrial assets have been segregated on a dedicated network. This all in parallel to providing key architecture and consultancy services across the Company.

The next phase of our transformation journey will be to continue the stabilisation of the information management cyber security position through our continued achievements, with a focus on further enhancing coverage of cyber controls and reinforcing our cyber products in their run mode. Let's continue to identify, protect, detect, respond, and recover to the ever evolving threats and challenges.

Digitally enabled products and services

Skywise

At its origin in 2015, Skywise was launched to make the data locked in our discrete legacy systems accessible and actionable by those needing it for their day-to-day operations. Now fully industrialised, Skywise is in 2021 adopted by more than 20,000 Airbus employees, it has also become an airline favourite. Skywise is the flagship platform of the aerospace industry's digital transformation, linking original equipment manufacturers, airline customers and aerospace suppliers. In 2021, the Company's open aerospace data platform continued to grow despite the COVID-19 crisis, and proved how the Company's strategy to place data at the heart of the transformation was a successful bet. With data unlocked from previous siloes, a virtuous circle has been created: with in-service data flowing back into operations and aircraft design, delivering incremental ameliorations and improvements. Data architecture ensures that data becomes the single source of truth powering the Company's operations and products, transforming the Company into a more fact-based, agile, empowered and data-driven organisation.

Building on the successful industrial use cases, Airbus initiated the implementation of its Airbus data product strategy that aims at supporting end-to-end business processes with an integrated data flow, recreating hence the digital continuity for Airbus legacy programmes. This effort is paving the way for DDMS digital continuity framework.

Every airline or supplier reported improvement to their workflows and operations after adopting Skywise. With more than 140 airlines now using Skywise, based on their testimonials we estimate that Skywise has saved the airline industry at least US\$ 200 million a year and has accelerated their return-to-service across their entire fleets. 2021 was also the year of the launch of Skywise Store and the 3rd party Applications Editor programs, enabling airlines to benefit from value propositions of Airbus as well as other independent applications vendors. Furthermore, 2021 was the year of Digital Alliance expansion

Airbus SE / 2021 Board Report 134

with new members.

This exponential growth was sustained because Skywise was designed from the start with the right security framework, a strict data governance implementation and industrial scalability. This made it possible to start small and then scale up. The technology partner's world-leading capabilities in data integration played a key role in the adoption; yet this exponential growth was driven by the focus on value creation and engagement with the business, more than by the technology itself.

Digital services for helicopters

Airbus Helicopters has launched a transformation plan to drastically change the customer digital journey throughout its products lifecycle and operations. A new collaborative platform was created to reinforce the link between customers, employees & partners.

Collaboration is at the heart of the design of the new AirbusWorld Platform launched in 2020 with a completely renewed experience, a set of new services and functionalities to boost the efficiency of the Helicopters ecosystem.

The single platform to share information and support activities with customers and partners has more than 40,000 users, customers, partners and employees. It is embedded in our new support and services practices, keeping the proximity especially in the specific context of the COVID-19 crisis.

The platform is continuously enriched with improvement, new services and new increments delivered every three months, embedding customer feedback, innovations and new standards.

Digitally enabled people

Google Workspace deployment

Google and Airbus continue to partner to further improve the functionalities of Google Workplace. 2021 has seen the improvement of offline capabilities, of user experience on mobile devices, of automatic translation features, but also the development of the client side encryption capability, allowing end users to encrypt their most sensitive documents with Airbus encryption keys. 2022 will see further deployments in Airbus Helicopters, Airbus Defence and Space and Airbus Atlantic.

Data analysts certification

Proving that our employees are hungry to learn and develop the key skills necessary to drive our digital future, the Digital

Academy continued to push for Airbus Data Analytics & Artificial Intelligence certification throughout 2021 at great pace with 220 further graduates within All Airbus Divisions, functions and countries. This initiative takes the total to more than 1,000 graduates from 15 countries, across all Divisions and subsidiaries, which continues into its fifth year in 2022.

Digitally inspired new business

Connected cabin

In 2021, Digital, Program Cabin, Engineering and Customer Services joined together to build a platform, distributed from the ground to the Aircraft for Airlines and Entertainment Furniture Equipment providers. Many use cases will be designed and based on this platform: for instance, in-flight entertainment adoption has already started. In 2022, a minimum value product is planned to be delivered to first customers.

Concluding remarks and 2022 challenges

The collective effort done in 2021 by all the Company's stakeholders led to the success of the information management simplification. It also highlighted and strengthened the value delivered to businesses and customers thanks to a more comprehensive and coordinated central value management. This effort will continue in 2022.

In 2021, Airbus set the scene of the future, raising digital at the heart of the Company. In 2022, the evolution will continue with a compilation of developments and rationalisations in all digital initiatives. Starting with the DDMS programme, that will endeavour the journey to carry out more efficient production processes while also rolling out the digital landscape of the future. Cybersecurity will continue to boost its ability to handle future threats by deploying cutting-edge organisation and technologies, which will bolster measures to prevent incidents across the group. The journey will be also coloured by 'green' IT, so contributing to a sustainable decarbonised future.

Airbus SE / 2021 Board Report 135

The digital potential for continuity and end-to-end industrial resilience has been demonstrated for two years in a row. Nevertheless, the possibilities have to be further implemented. We progressed a lot in setting the ground for the 'cloud' shift and in better understanding how our already efficient industry can be improved even further. There are still margins to be tackled where digital has a major role to play to make Airbus ready to shape the future of the aerospace industry.

These initiatives will continue to succeed if they are addressed in a transverse, open and bold way, by taking an even closer, more granular and at the same time holistic view of the entire ecosystem. What will make the difference is our readiness to take a pragmatic look at them and to act collectively and collaboratively.

Research and technology

The Airbus Engineering and Technology Department is led by the Chief Technical Officer ("CTO"). Part of its responsibility is to define, deliver and protect all the Company's research and technology ("R&T"), enable technology synergies across the group, federate the Company's innovation activities and ensure expertise in breakthrough technologies. The department applies a lean project-based approach, tracked and managed using earned value management, technology readiness levels and figures of merit. Technological collaboration with external research communities and partners is encouraged and coordinated through the department with technical and scientific experts. These duties are delivered through the capabilities outlined here below.

The Company-wide integration of R&T technology and alignment with institutional research partners is achieved through cross-portfolio technology planning and roadmapping, giving an exhaustive view of technology targets and investments. In addition, Company-wide engagement for joint funding with public agencies is achieved through a common R&T Funding contract management.

Central R&T ("CRT") is the cross-divisional R&T organisation that prepares the Company's long-term technological capabilities. CRT leads specific investigations in emerging areas of research and conducts ambitious research projects while leveraging leading academic, scientific and research institutions to best utilise their expertise for achieving the Company's ambitions.

Development of selected breakthrough technologies is accelerated through Airbus demonstrators, by employing rapid maturation methods. This function delivers, thanks to its fully owned Airbus UpNext subsidiary, flight and ground demonstrator projects that drive collaborative new ways of working, provide the highest level of transparency and challenge the status quo by embedding Airbus' technology DNA in a highly dynamic environment.

Each Division has its own R&T function, defining and delivering the divisional projects. The divisional R&T functions are primarily planning, decision making and arbitration teams, which are accountable within their perimeters to both Technology, Divisional Engineering and Product Strategy. Their responsibilities include securing continuous improvement in divisional competitiveness and the ability to develop business. Within the Company, commercial specific priority is given to technologies for sustainable next-generation aircraft, bringing together product, production system and services. In order to maximise the Company's R&T activities, the Divisions leverage the external ecosystem, utilising the portfolio of projects for funding opportunities and engagement with global partnerships, research institutes and universities. This ensures efficient R&T portfolio execution, and benefits from new ways of working including but not limited to agile methodology and minimum viable product demonstration strategy. Responsibilities include securing continuous improvement in divisional competitiveness and the ability to develop business by establishing and driving the Company's R&T ambitions.

Fast-track roadmap owners serve as principal advisors to the CTO on technical vision and roadmaps for associated technology areas. Fast-track roadmaps ensure coherency in the portfolio of activities and for the rapid advance of strategic priorities. Current fast-track roadmaps cover:

- Electrification;
- Industrial systems and manufacturing;
- Connectivity;
- Autonomy;
- Materials;
- Artificial intelligence.

The Company's intellectual property is protected, secured and defended through a central intellectual property function responsible for patent applications, portfolio investigations and portfolio defence.

Technological innovation and outreach to expertise in specific regions is delivered through three units: Acubed in Silicon Valley; Airbus Innovation Centre in China; and Airbus Scale, bringing together corporate innovation, start-up engagement and company building activities.

Airbus SE / 2021 Board Report 136

Key progress in 2021

Airbus Demonstrators – Airbus UpNext

Airbus UpNext is actively shaping the future of the aerospace industry as part of the Airbus innovation ecosystem by building demonstrators at speed and scale, in order to evaluate, mature and validate potential new products and services that encompass radical technological breakthroughs.

The fello'fly demonstrator, with the objective to prove the technical, operational and economic viability of wake energy retrieval for commercial aircraft, was successfully handed over from Airbus UpNext to Airbus Commercial in December 2021. This was done after the project had successfully performed the first long-haul demonstration of formation flight in general air traffic (GAT) regulated transatlantic airspace, with two A350 aircraft flying at three kilometres apart from Toulouse, France to Montreal, Canada. The aircraft were greeted at Montreal-Trudeau International Airport. Over six tons of CO₂ emissions were saved on the trip, confirming the potential for more than a 5% fuel saving on long-haul flights.

The Airbus UpNext TELEO demonstrator project proved the feasibility to provide a communications experience in the air at the same level of quality as customers have come to expect on the ground, thanks to a smart usage of the various communication channels available on board. This so-called Airbus UpNext TELEO smart routing is the result of a broad review of the commercial software defined networking solutions (13 suppliers), most of them tested in a dedicated benchmark lab. The selected solution has then been implemented on commercial avionics, validated through rigorous lab testing, field tested on ground vehicles and finally flight tested on an A350-XWB all within three years, and is recognised as having reached the point of a minimum viable service.

In parallel, by developing a very high-capacity analogue optical feeder link communication, TELEO demonstrated the potential for space solutions to offer data rates beyond current radio frequency transmission limits. Although the solution will only be fully proven and validated in 2023 (in space demonstration onboard the Arabsat BADR 8 satellite), it is already part of Airbus Defence & Space' ongoing product solutions, and will continue to be developed and deployed in the years ahead.

In September 2021, Airbus UpNext launched an extra-performance wing demonstrator project focused on accelerating and validating technologies that will improve and optimise wing aerodynamics and performance for any future aircraft. This scaled demonstrator will integrate and fly breakthrough wing technologies on a Cessna Citation VII business jet platform in representative flight conditions. The applications of the extra-performance wing would be compatible with any propulsion solution and aircraft configuration and would reduce CO₂ emissions, contributing greatly to Airbus' decarbonisation roadmap.

In April 2021 Airbus UpNext announced VERTEX, a demonstrator with the aim to simplify mission preparation and management, reduce helicopter pilot workload, and further increase safety.

The autonomous technology bricks set to integrate the Flightlab are: vision-based sensors and algorithms for situational awareness and obstacle detection; fly-by-wire for enhanced auto-pilot; and an advanced human-machine-interface - in the form of a touchscreen and head worn display for inflight monitoring and control. The combination of these technologies will enable a system that can manage navigation and route preparation, automatic take-off and landing, as well as following a predefined flight path. The incremental integration of these technologies onto the helicopter Flightlab has begun ahead of a complete demonstration in 2023.

In March 2021, Airbus UpNext announced ASCEND "Advanced Superconducting and Cryogenic Experimental powertrain Demonstrator" to break through the performance of electric propulsion systems below 1MW and enable high-power propulsion (>1MW) using superconducting materials and cryogenic temperatures. These technologies will also optimise or enable new propulsion architectures for low and zero emission flight. The results are expected to show the potential for a 50% reduction in component weight and an increase in efficiency of more than 5%. It will also show a reduction in the volume of electrical components, the complexity of the installation as well as a reduction of the voltage below 500V, compared to current systems.

The ZEROe concept planes revealed in September 2020 unveiled the Company's investigation and research into hydrogen-based propulsion. Airbus UpNext is preparing the ground for technology maturation and demonstration, actively identifying and de-risking the main technology bricks to support Airbus' 2035 ambition. The Autonomous Taxi, Take-off and Landing ("ATTOL") demonstrator leveraging computer vision technologies and techniques successfully finished in 2020 is progressing. Further work on safety enhancing systems that goes beyond ATTOL state-of-the-art is ongoing.

In December 2021, Airbus increased its presence in Spain with the launch of an Airbus UpNext entity, a wholly-owned innovation subsidiary. The Spanish Airbus UpNext entity will initially be accountable for the study and demonstration of

Airbus SE / 2021 Board Report 137

hydrogen-powered non-propulsive energies, as well as autonomous air-to-air refuelling operations applying advancements in vision-based technology. This new presence will leverage the expertise of Airbus Commercial Aircraft, Airbus Helicopters and Airbus Defence and Space in Spain.

Acubed

Acubed is the Company's innovation centre based in Silicon Valley, an epicenter of tech talent and investment. Acubed's mission is to develop and deliver breakthrough technologies at the intersection of software and hardware. Since 2015, Acubed has been a driving force to help Airbus build the future of flight. Initially set up to disrupt Airbus from within to mitigate disruption from external forces, Acubed kick-started Airbus' exploration of areas such as electric vertical take off and landing aircraft (Vahana), mobility-as-a-service (Voom), Unmanned Traffic Management (Airbus UTM), Advanced Digital Design and Manufacturing (ADAM), and modular cabin concepts (Transpose), among other emerging trends.

With over six years of operations, Acubed's model has evolved to ensure it injects lasting value and expertise from Silicon Valley into Airbus. Its current flagship projects are closely aligned to Airbus' strategic priorities and aim to help Airbus secure and maintain leading positions in new and emerging aerospace markets.

Acubed's Wayfinder team is developing certifiable autonomous flight and machine learning solutions to help Airbus bring about a significant increase in safety and efficiency in the next generation of commercial aircraft. In 2021, the team progressed its vision-based landing flight test program, adding new cameras and processing to handle night-time imagery to its flying testbed operating out of Palo Alto Airport, in order to continue laying the groundwork for more autonomous aircraft systems. The Wayfinder team, which delivered AI algorithms in 2021 for vision-based landing and taxi functions for testing on an A350 flight test aircraft, is working hand-in-hand with Airbus' teams in Europe to continue to improve and iterate on their computer vision-based autonomous systems and data-driven development in order to support the Company's wider autonomy goals.

The **Advanced Digital Design and Manufacturing (ADAM)** team at Acubed is seeking to future-proof the aerospace industry through the application of digital innovation to design and manufacturing. Whether adapting manufacturing processes to gain efficiencies or to cope with disruptions, ADAM is helping to reduce lead times, production costs and to improve workflows dynamically, while helping to blend software and hardware expertise, an emerging skill set required for future aerospace careers. In 2021, the ADAM team actively delivered on a number of engagements, namely for the DDMS organisation in Europe to digitally generate cabin layout options for customers' quick turn-around service upgrade offers; to the US final assembly line in Mobile, USA, generating measurable improvements in logistics, AOS and quality; and to the engineering department in the US and Europe implementing the automation of stress analysis processes (e.g. A321XLR ribs, spars, and covers).

The **Airbus Unmanned Traffic Management (UTM)** team at Acubed is enabling autonomous and digital operations to ensure a safe, fair and efficient airspace through research, simulations and industry collaboration. The team is building a suite of products to provide an extensible baseline UTM ecosystem, which includes the provision of essential aeronautical information services such as the FAA-approved Low Altitude Authorisation and Notification Capability (LAANC) airspace authorisation. Airbus UTM is partnering with Metron Aviation to participate in NASA's Advanced Air Mobility National Campaign, in which they successfully completed all required testing and development of UTM concepts as part of the X3 phase, and have now entered into the next X4 phase. The team is currently focused on industry needs and adoption of simulation-as-a-service to validate UTM concepts, as well as on growing the number of operators using their authoritative data products.

Airbus China Innovation Center ("ACIC")

ACIC, based in Shenzhen, is the first innovation centre set up by the Company in Asia. Its mission is to fully leverage China's local innovation ecosystem including talents, partners and resources, combined with the Company's expertise in aerospace, to discover promising technologies, to identify solutions enabling new services, and to fast-track delivery of innovation projects.

Manufacturing innovation

The team is tasked to explore industry 4.0 technologies to improve efficiency and safety on shop floor, as well as to leverage Airbus' industrial sites in China for accelerated local testing and global dissemination. The team is working on computer vision, AGV, 5G industrial connectivity, smart tooling, remote inspection, green factory and IoT. Various applications are handed over to business and implemented in daily operation.

Airbus SE / 2021 Board Report 138

Cabin experience

The team is tasked with providing innovation for the cabin and cargo of tomorrow, to enhance Airbus' local cabin offering (localisation) and to increase value for Airbus global cabin products (from local to global). The team is working on broadband connectivity with 5G, a smart cabin operation system contributing to Airspace Link, flexible displays and cabin hygienic solutions.

Tech lab

The team is working on computer vision algorithm development, battery scouting and testing, various types of sensors fit to different scenarios and fast electronics prototypes building. The team is also starting to engage with certain industry standard making organisations, to influence standards with aeronautic requirements.

Airbus Scale

Airbus Scale focuses on active innovation delivery and operates on three different levels all integrated under one "roof":

- **Corporate Innovation:** Fostering entrepreneurship and out-of-the-box thinking within Airbus' own culture. The vehicle by which Airbus "intrapreneurs" can submit a business strategy or an idea, after which Scale will vet it against the Company's growth strategy. If there is a match, Scale will deliver a business model and develop a viable product or service.
- **Start-up engagement:** The team combines Airbus' corporate expertise with its ability to identify start-ups, partnering with those which are at a later stage in order to mature and scale ideas through mutually-beneficial collaborations.
- **Company building:** The team builds and launches new businesses that will support the recovery and future growth of Airbus, based on existing non-strategic assets.

On top of those activities, Airbus Scale aims to support the business with global technology scouting (GTS). GTS is an efficient team spanning (almost) all continents in order to reach the top innovation hotspots to lead the objective detection of technology and trends that support or disrupt Airbus' business.

Airbus Commercial Aircraft

generation of the CSX/DeLorean, Airbus Commercial R&I activity was focused on systems, fuselage technologies and cabin. There is also a transverse technology stream comprising industrialisation, sustainability and maintenance technologies.

As part of its ambition to lead the decarbonisation of our industry, Airbus will continue to develop hydrogen technologies around the propulsion and liquid hydrogen storage and distribution systems. Airbus already started in 2021 to capitalise early on learnings in hydrogen technologies thanks to laboratory testing. This will accelerate in 2022 with more integrated ground testing, as well as the preparation of the forthcoming flight demonstrations. On top of that, different aircraft configurations will be explored and matured in 2022, to assess the most efficient way to integrate those technologies inside the aircraft. The Company will also continue its effort to support our customers to build their route-to-net-zero, and to grow its partnership landscape for critical technology bricks and the future infrastructure.

Wing engineering and manufacturing demonstrators have made further progress, with the assembly in Broughton of the first full-scale wing box using elements from various plants and partners, with learnings both for the product itself and its industrial system. Airbus explored in 2021 the potential, the feasibility and the enablers of high aspect ratio wings. In the propulsion perimeter, various types of future propulsion architectures, product solutions, industrial technologies and capabilities are being explored to unlock strong improvements in performance and cost. Partnerships with engine and equipment manufacturers were developed.

Research projects are also looking into the fuselage architecture, its materials and industrial strategies, with academic and supply chain partners. As part of the Clean Sky 2 EU research programme, assembly of a full-scale barrel thermoplastic demonstrator began in 2021. Use cases of sustainable materials for cabin parts have increased in maturity. Disruptive product and assembly techniques for empennages have proven their feasibility and value. Systems teams continued exploring platforms and components for aircraft systems and landing gear, and researching areas with potential for aiding more autonomous flights in the future.

Airbus Commercial progressed further in 2021 on the road to developing robotic and automation solutions in aircraft industrial systems. Technological concepts to reduce in-service operational interruptions and maintenance burdens have been defined.

Technology development in 2021 also included delivering options for the continuous improvement of serial programmes such as the A320 and A350 aircraft.

Airbus SE / 2021 Board Report 139

Airbus Helicopters

Significant steps forward were made in 2021 in the Research and Innovation department, with activities focused on the main demonstrators and techno-bricks.

The Flightlab, the Airbus Helicopters' techno bricks demonstrator, performed several tests in 2021:

- Eye for Autonomous Guidance Landing Extension (EAGLE), based on a gyro-stabilised camera, was validated using an artificial intelligence image processing software.
- Rotor Strike Alerting System was fully validated for handover to R&D for light helicopters
- Health and Usage Monitoring System (HUMS) was successfully demonstrated for light helicopters using neural network and wireless sensors.
- Engine Back Up System function was demonstrated on a single engine helicopter.

The delivery of RACER's flight components by the programme's European partners has started. The main fuselage was delivered from Romania to Donauwörth to finish the installation of the fuel system, and the canopy and was then transferred to Marignane. The tail boom and wings were delivered from Airbus Helicopters in Spain and Hamble Aerostructures Ltd according to the planning. The development of the main gear box and lateral rotor gear boxes is ongoing in collaboration with Avio Aero. The supercritical rear transmission was validated for flight. The first flight is now planned for the second half of 2022.

The CityAirbus demonstrator, which is a fully electric urban air mobility (UAM) vehicle, successfully finished its flight campaign in Manching. The new eVTOL prototype, CityAirbus NextGen, was unveiled during the Airbus Summit in September 2021, showing excellent potential in terms of performance (range and speed) for the future UAM applications. The first flight is foreseen in 2023, paving the way for certification in 2025.

Airbus Defence and Space

During 2021, we still faced a challenging situation in the frame of R&T, so it was necessary to further review and streamline the portfolio of R&T priorities and projects for the Division. The concept of technology flagships has been essential to facilitate and optimise this exercise of prioritisation. Five different technology flagships define the main capabilities and competences required in the Division while maintaining a full alignment across the programme lines and products portfolio: "Connectivity and Combat Cloud", "Mission Management and Data Exploitation", "Cost Efficiency and Industrial Performance", "Air Systems and Platforms", and "Spacepower".

This optimisation of the technology landscape also took into account the reinforcement of links between R&T and R&D, and emphasised technologies reaching an "adoption" by the business and the programme lines, once the technologies reach a maturity level that allow their industrialisation and insertion into a product.

In order to maintain a proper balance between short- and long-term technologies, part of the R&T portfolio has been ring fenced to secure the activities focussing on strategic technologies, even if not time-critically demanded by the programmes at this stage, under the assumption that mastering those technologies will be key to maintain Airbus' competitive positioning in the mid to -long term (e.g. Quantum, advanced AI applications).

In terms of the main technology achievements, we achieved significant progress across all flagships. Several deliveries for direct insertion into products took place in the area of advanced algorithms for data exploitation and automatic processing of information from multiple sources (mission management flagship). We also achieved the further delivery of core technology bricks especially for the OneSat program in several areas as thermal, propulsion, avionics, (Spacepower Flagship).

In the Air Systems and Platforms flagship it is relevant to highlight the milestones achieved in the Integrated Safety Critical Control Chain Computer technology for fighter aircraft, as well as the preparation for the CleanSky 2 Flight Test Bed demonstration flight that will take place in the first part of 2022, being the only flight demonstration of the CleanSky 2

European Framework Programme.

Regarding the Combat Cloud and Connectivity flagship 2021's main achievements were in the area of technology bricks and elements that contributed to successful campaigns in Skynet 6, as well as significant progress made on the Optical roadmap for Space, with several elements further maturing and ready for adoption and insertion into the TELEO demonstrator.

On the Cost Efficiency and Industrial performance flagship, several elements of the additive manufacturing global roadmap achieved maturity for industrialisation to be used into products both in the space and aircraft environments, and a full set of technology solutions was delivered to optimise and reduce time/cost in the manufacturing and industrial environment, ranging from integration of digital solutions and tools to share data, to dedicated solutions for improved ground electrical testing and troubleshooting.

Airbus SE / 2021 Board Report 140

Finally, strong efforts were placed on reinforcing the different national eco-systems footprint in the core nations. This is intended to maximise public-private collaboration, especially to recover from COVID crisis. This has led to an improvement in the ecosystems, which will be further leveraged when preparing different campaigns and proposals in the European framework, with strong emphasis on the Clean Aviation and European Defence Funds Programs.

Central Research and Technology (CRT)

CRT pioneers the future of aerospace by exploring and delivering ambitious new technologies of maximum potential impact on Airbus future products and services. CRT operates at the junction of the Airbus core and global research excellence with two main objectives:

- Be a technical trailblazer: explore and deliver relevant new technologies, as well as de-risk and create new opportunities.
- Prepare the skills of Airbus Tomorrow: Build internal capabilities in strategic emerging technologies and provide the relevant expertise to internal customers for technical support and decision-making.

In 2021, CRT had 57 projects running concurrently across its domains. Highlights from these activities include the following.

- **Blue Sky:** A function responsible for exploring early breakthrough technologies that might change the game for the aerospace industry. After having successfully advanced research on terminals for quantum communications, and on materials recycling using novel biotechnologies. The function has evolved to cover a wider scope of technological and societal factors, and focus on strategic value returns for Airbus. New clusters have been launched: Future Energies (new ways to generate, convey and manage energy), Future Matter (manipulating matter to generate new applications), Future Brains (new dimensions enabled by advances information capture, processing, distribution, virtualisation), and Future Links (re-thinking the transport of people, goods and information).

- **Communications:** The team is pioneering novel communication system architectures and technologies for pervasive and secure connectivity on our airborne platforms. Several projects came to their final phase this year including lab and flight demonstrations for ultra-high speed links between flying platforms, a new wireless communication/sensing system architecture for an aircraft cabin including remote powering and a first implementation of a many-core processor design for highly -critical applications. Further research is ongoing to exploit quantum communication technologies to achieve maximum security for our airborne/space-borne communication links.

- **Materials:** 2021 saw a further push towards new technical solutions in the areas of circular raw materials, simulation/digitalisation in materials, advanced processing and surface technologies. These key areas will support sustainability targets, products mission performance and competitiveness. Organic and in-organic approaches are covered. An optimisation of the lab operational organisation was done to enable further focus on key strategic areas. Sustainability aspects are in the centre of the activities and further ramping up. Progress on the CO2 negative carbon fibre gives confidence that the first physical hardware will be available in 2022. Alternative recycling routes for composites are being explored further (e.g. enzymatic recycling). Circularity for titanium materials is showing good progress and will open new opportunities regarding eco-friendliness and optimised waste channels. A new project towards all green surface preparation and protection has been started. Advanced materials technologies for efficient and robust hydrogen storage solutions have been initiated and accelerated.

In the area of digitalisation of materials (from materials definition, to characterisation and analytics), the first AI based solutions for image analytics have been handed over for divisional application. AI in material design is being pushed for the first time to develop smart, indicative coatings. Further projects on digital twin development are progressing.

Additive manufacturing of advanced materials is progressing towards multi-material printing opportunities or robust printing of embedded electronics in structures.

- **Electrification technologies:** During 2021, we made significant progress on several aspects of electrification and electric propulsion techno bricks.

One related to electrical motor working at very high temperatures yielded improvements in material sustainability, innovative windings and heat exchanger technologies.

Another significant step was the successful demonstration of power electronics components and systems working at cryogenic temperatures, with a world premiere on a functional prototype of DC-DC converter immersed in liquid nitrogen. Finally, wireless power transfer technology for aeronautic applications was demonstrated. We significantly improved the maximum power transmitted over a few tens of centimetre air gap. This technology has a clear application for UAV battery charging with contact.

Airbus SE / 2021 Board Report 141

- **Virtual product engineering:** The team has investigated advanced model based systems engineering technology bricks to support co-development of product and industrial systems, and has successfully demonstrated approaches to be handed over to the DDMS (Digital Design Manufacturing and Services) programme for industrialisation. In addition, projects are running to support modelling and simulation needs for future sustainable aircraft, including the use of hybrid AI techniques to support traditional computational approaches.

- **Data science:** The team has concluded two projects this year. One focused on learning local communication routing policies and improving communication protocols for heterogeneous and highly dynamic networks. Another one focused on providing proofs of neural networks' robustness that will be needed to certify systems embedding machine learning components. Both projects were handed over to the relevant divisional customers and will trigger new research projects in the near future. Ongoing projects include virtual assistance integrating decision support for manufacturing and cockpit scenarios, usage of natural language to interact with robots and development of in-process AI to support qualified industrial processes.

7. Airbus Strategy

7.1 Commercial leadership, value creation and profitability

2020 was an unprecedented year for the aviation industry across the globe, and 2021 became a turning point setting the direction for both a managed recovery and the longer term transformation of aviation. The COVID-19 outbreak demonstrated how severe and unpredictable events can impact a global business like Airbus. It also demonstrated that when industry, customers and governments work together, it is possible both to effectively manage what can be considered as the deepest crisis in the history of aviation, and progressively learn how to better prepare for the overall direction of travel in the future. Another key shift happening in parallel has been acceleration in the demand for sustainability and zero emissions targets. Addressing this challenge is, in effect, key to ensuring airlines' continued license to operate. In this new environment, the Airbus purpose "We pioneer sustainable aerospace for a safe and united world" is the Company's guiding star. The Airbus strategy is designed to set out the strategic priorities to enable the Company to deliver on this purpose.

The strategic priorities focus on the geopolitical situation, sovereignty, resilience and sustainability and are underpinned by the leadership role that the company expects to take and which will be so important to its success.

1. continue to grow Airbus as an aerospace and defence leader;
2. leverage its roots to pursue global reach through local actions;
3. continue to invest in the future in an evolving and highly competitive environment;
4. lead the transformation of the aerospace industry while meeting the highest environmental, social and governance standards.

1. Continue to grow Airbus as an aerospace and defence leader

Leadership today is not a guarantee for leadership tomorrow. The Company believes that its ability to win in the future will be earned through continuous innovation, both in and around its current portfolio as well as when preparing the future generation of products and related services. All activities must be executed to the highest quality and safety standards possible.

1.1 Keep current portfolio young and competitive

The Company's financial success is strongly linked to capitalising on the current commercial aircraft portfolio through incremental improvements. Airbus estimates that all current products have a substantial upside leading to exceptional longevity. This has been demonstrated by the New Engine Option (NEO) versions of A320 and A330 and stretch versions such as the A321XLR, but also in smaller incremental improvements on every product. The A330neo and the A350 XWB both deliver high levels of fuel efficiency (25% fuel consumption saving compared to previous generation aircraft), accelerated pilot on boarding (all wide-body aircraft benefit from a common type rating making pilot training shorter, smoother and lower cost), and comfort through the exclusive airspace cabin, setting a modern benchmark in passenger comfort and wellbeing. Airbus aircraft are also well suited to serve freighter and VIP markets and are proven to be competitive in selected military niches. The decision to launch the A350 Freighter version in 2021 is a typical example, setting a new standard for airfreight efficiency. With the same logic, the helicopter portfolio is expanding through military versions of commercially successful products. In the military field, Eurofighter has a performance today beyond customer's initial targets through intelligent upgrades, and remains a very strong competitor for export markets.

1.2 Pioneering for the next generation

In preparing the next generation of aircraft, the requirement for improved sustainability will be the catalyst that allows aviation to continue to meet its larger purpose of uniting the world. The quest for zero emissions air travel will fundamentally change aerospace. Not since the introduction of the jet engine has the industry faced such a challenge, in particular around new energy sources. However, new certification challenges, new materials, new designs, new industrial processes and new business models will also be assessed, which will provide sources of opportunity. In short, the Company aims to set the standards and mature the technologies of sustainable aviation for the benefit of the environment and society at large, delivering products that are attractive and efficient for our customers while remaining viable and feasible for Airbus.

1.3 Build advantages through a broad span within aerospace and defence

The resilience provided by a broad portfolio of products and services is essential for Airbus today and will continue to be in the future. Most aerospace companies nurture a substantial defence and space element in their portfolio to gain synergies and increase stability. This is also true for Airbus, with commercial aircraft, helicopters, defence, space, and security activities

Airbus SE / 2021 Board Report 143

all part of the portfolio. Hence governmental, military and commercial business, products and services, fixed wing and rotary platforms, satellites and launchers, both self- and customer-funded, are all elements which balance market variations, provide synergies, and help to smooth investment cycles. Additionally, as digital design, manufacturing & services require similar capabilities across aerospace segments, owning a broad portfolio delivers flexibility in resource allocation and the reuse of investments in core capabilities. The COVID-19 crisis demonstrated the importance of having strong and complementary helicopter, defence, space and security businesses alongside commercial aviation within the portfolio, enhancing the resilience of the overall group.

1.4 Expand as a leader towards new territories

Urban air mobility ("UAM") is at the forefront of a revolution to make urban mobility three dimensional in the future. Capturing growth in new vertical take-off and landing ("VTOL") and UAM markets, for both platforms and services, is a major driver for the Company's helicopter strategy. Airbus launched its NextGen eVTOL in 2021 for this purpose. Shaping air and space power which integrates aircraft, unmanned systems and space assets with a cloud structure for command and control, will revolutionise the performance of Airbus' defence customers in future and aims to secure the Company's long-term presence in defence markets. In commercial aviation, the quest for climate neutral solutions will play out globally and will drive demand for our products and services.

2. Leverage its roots to pursue global reach through local actions

Over the past 50 years, Airbus has grown from being a cooperation of national aerospace companies, in four European countries, to a global leader in commercial aerospace with a strong foothold in helicopters, defence, space and security. The ambition of European industrialists to work together towards a common goal of creating one leading player in commercial aerospace was decisive to the success story of the Company. Then, as today, that European vision saw the UK as being integral to its global success. No aerospace and defence company is more culturally and humanly diverse than Airbus. More than 140 nationalities make up the Company's workforce and over 20 languages are spoken at Airbus, reflecting the diversity of its employees and customer base. This is a key strength of the Company in addressing global markets. Airbus has built on its strong European heritage to become truly international, operating across more than 180 locations. The Company has invested in and grown aircraft and helicopter final assembly lines across Asia, Europe and the Americas.

3. Continue to invest in the future in an evolving and highly competitive environment

The COVID-19 pandemic has required Airbus to face the deepest crisis in the Company's history, focusing on cash containment to ensure survival. The right combination of growth, profitability and resilience is vital to the Company's long-term competitiveness.

Aerospace remains a major backbone of the global economy and a vital service to people and businesses. Airbus is committed to playing its role in ensuring that its sectors consistently deliver on their vital role in the global economy by building resilience through having sufficient funds available to withstand the shocks; through close cooperation with stakeholders to ensure the overall travel value chain survives; through seamless coordination along the supply chain to detect issues rapidly; and through reinforcement of the balance sheet to continue investing in future competitiveness.

The Company believes that the way to remain attractive to investors, employees and society at large is to be at the forefront

of innovation and to be a leader in the global market. This requires discipline on both revenues and the cost base, throughout all Airbus businesses, to gain sufficient volume and profitability to continuously drive the industry forward. Having successfully increased revenue and profit in the years before the Covid-19 crisis, continuous improvement is essential to further support Airbus' resilience and prepare for future investments. As the Company delivers on its strategy as a leader with European roots and global reach, the Company is uniquely positioned to pioneer the industry, deepen relations with its customers, expand its role in defence, space and helicopters, while delivering shareholder value in line with market expectations.

4. Lead the transformation of the aerospace industry while meeting the highest environmental, social and governance standards

Aviation's licence to grow and operate in the future is inherently linked to sustainability. Improving the environmental impact of our day-to-day lives is at the top of agendas throughout the world. While some argue for limiting mobility, the Company believes the solution should not hinder people's ability to connect and unite across the world. Making the world a smaller and more transparent place to live makes it safer and more rewarding. The ability to discover, learn, share and remain safe are basic human needs and a guiding star for the Company. Air travel brings prosperity through the connections it makes. One in ten jobs around the world is in the travel and tourism industry, and air travel routes are the arteries of this system. Sufficient prosperity will be required to deliver the climate neutral transformation of industry that society demands. Hence, the purpose of the Company is to pioneer sustainable aerospace for a safe and united world.

Airbus SE / 2021 Board Report 144

The Company does not, however, operate in a vacuum. Social sustainability and good governance are integral elements in managing the Company's vision for a sustainable future. Airbus' business is deeply connected with environmental, social, and governance ("ESG") objectives through various international standards, frameworks and initiatives.

Airbus is also a global leader in the defence sector. Defence is a crucial component of security, and security is the precondition for a responsible and sustainable world. In this endeavour, Airbus is committed to sustainable and responsible business practices, and maintaining the strictest legal and highest ethical standards in full compliance with international laws and European and national export control regulations. Our defence capabilities provide countries with the means to protect their citizens, democratic values and vital infrastructure, which is of incalculable societal value.

4.1 Lead the journey towards clean aerospace

Airbus and the industry at large must ultimately determine ways to eliminate the impact of its activities on the climate. This must be achieved by the current generation. This is a clear expectation of the flying public and society at large. Working with international aviation organisations, Airbus is striving to lead the industry on a strong path to the lowest climate impact solutions as part of the industry's commitment to the Paris Agreement.

A major focus of the Company's sustainability strategy is reducing the CO₂ emissions of its aircraft, as well as its industrial environmental footprint at its sites worldwide and throughout the supply chain. To this end, the Company is contributing to meeting key industry-wide environmental performance targets. As well as investing in and developing viable products that are attractive and efficient for its customers by maturing the technologies related to sustainable aviation fuels, industrial systems, aircraft architectures based on next generation engines, future wing and fuselage design and automation, the Company also remains focused on maturing hydrogen ecosystems and transport and refuelling infrastructure to deliver on its ambition to bring the world's first zero-emission commercial aircraft to market by 2035, known as ZEROe.

4.2 Build our business on the foundation of safety and quality

Safety cannot be compromised. That's why the number one priority for the Company is to protect and safeguard its people, suppliers, communities, customers and assets from health and safety risks arising from the Company's activities. This is why fostering a safety culture which goes beyond regulatory compliance in product safety and quality, and championing a "zero-harm" mind-set in which the Company takes responsibility for itself and others, is a core commitment of the Company's sustainability strategy. The Company focuses on developing rigorous safety management guidelines to ensure its long-term competitiveness.

4.3 Respect human rights and foster inclusion

The Company's respect for human rights is an essential part of responsible business conduct in its business activities and throughout the value chain.

Airbus believes that everyone who works either for or with the Company, both within its business operations and the supply chain, contributes to its continued innovation, creativity, and business success. Therefore, it's imperative that the Company fosters empowerment, collaborative working, inclusiveness and diversity to enable a workplace to which people can bring their best selves. The Company ensures that its employees have access to a wealth of education and employee mobility opportunities to grow their skills because the Company strongly believes a more educated workforce is a more empowered workforce.

4.4 Exemplify business integrity

Business integrity is non-negotiable. As the Company's operations reach across more than 100 countries worldwide, it has a clear obligation to comply with laws and regulations wherever the Company operates. The Company conducts its business ethically, based on its values, and not only in compliance with laws and regulations. Furthermore, the Company strives for a culture of integrity in its people, partners and suppliers. In an effort to improve accountability, the Company is strengthening its current compliance programmes with the intention of becoming a benchmark in this area. To this end, the Company has established a dedicated Ethics & Compliance programme and organisation, ensuring that ethical and compliant behaviour is deeply embedded throughout the Company.

Airbus SE / 2021 Board Report 145

7.2 TOP COMPANY OBJECTIVES 2022

Customer

Establish ourselves as the partner of choice by building strong customer relationships through the excellence of our people, products and services.

Operational performance

Achieve 2022 requirements on A320 Family ramp-up and prepare the future, with product safety and quality as a foundation.

Financial performance

Strengthen the Company's financial situation and ensure competitiveness by driving a sound cost base.

People

Build an inclusive workplace for all employees, with safety at work and compliance fully embedded in our business. Ensure that our leadership drives change and engagement.

Sustainability

Move forward on our decarbonisation ambition, engage our value chain and reduce our environmental footprint.

Enable the Future

- Grow our people competencies needed to deliver today and secure tomorrow
- Prepare our future industrial system by embracing new ways of collaborative working, built on a foundation of robust data and digital continuity
- Develop the key decarbonisation technologies. Promote our current product portfolio while implementing our sustainability roadmap
- Engage with external stakeholders to decarbonise aviation by accelerating the production and usage of Sustainable Aviation Fuels (SAF)

Aiming to bring the first zero emission commercial aircraft to market by 2035.

The Company always:

- Keeps customers at the heart of what we do to deliver value and reliability;
- Considers health, safety and quality as vital to our business;
- Optimises and adheres to end-to-end processes;
- Drives change and transformation for performance and competitiveness;
- Protects business from security threats and malicious actions;
- Fosters innovation by being open-minded and creative in all we do;
- Instils a culture of inclusiveness and continuous learning;
- Speaks up, listens up, and acts with integrity and respect.

The information contained in this Board Report will enable you to form an opinion on the situation of the Company and the operations, which are submitted to you for approval.

For further information and detail regarding the Company's activities, finances, corporate governance and in particular risk factors, the reader should refer to the Company's website www.airbus.com.

The Board of Directors hereby declares that, to the best of its knowledge:

- the financial statements for the year ended 31 December 2021 give a true and fair view of the assets, liabilities, financial position and profits or losses of the Company and undertakings included in the consolidation taken as a whole; and
- this Board Report gives a true and fair view of the position as per the balance sheet date, and of the development and performance during the 2021 financial year of the Company and undertakings included in the consolidation taken as a whole, and the principal risks facing the Company have been described herein.

8. Financial targets for 2022

As the basis for its 2022 guidance, the Company assumes:

- No further disruptions to the world economy, air traffic, the Company's internal operations, and its ability to deliver products and services.

The Company's 2022 guidance is before M&A.

On that basis, the Company targets to achieve in 2022 around:

- ▶ 720 commercial aircraft deliveries;
- ▶ EBIT Adjusted of € 5.5 billion;
- ▶ Free Cash Flow before M&A and Customer Financing of € 3.5 billion.
