Union Investment – devoted to your interests

The Union Investment Group manages assets of about EUR 284 billion, making it one of Germany's largest investment companies for both private and institutional investors. It is an expert for Fund management within the cooperative finance association. About 4.2 million private and institutional investors have placed their trust in us as their partner for fund-based investments.

Today, the idea behind the foundation of the group in 1956 is more topical than ever: private investors should have the opportunity to benefit from economic developments - even with only small monthly savings contributions. The interests of these investors have always been our main concern and, together with our approximately 2,880 employees, we are committed to looking after them. About 1,270 public-investment and specialist funds offer private and institutional investors solutions tailored to their individual requirements. These include share, bond and money-market funds, open-end real estate funds as well as intelligent solutions for asset accumulation, risk management and private and corporate pension schemes.

Partner cooperation with advisers from the Volksbanken and Raiffeisen banks forms the basis of Union Investment's strong investor orientation. In approximately 12,250 branches, investors can call upon advisers for individual consultancy on all investment matters.

Our awards for individual funds - and our solid performance in industry ratings - provide the best evidence of the quality of our fund management. At the 2016 FERI EuroRating Awards, Union Investment won the award for best asset manager in the "Socially Responsible Investing" category for the second year in a row. In addition, at the 2016 €uro Fund Awards in February 2016, the finance publisher gave Union Investment the "2016 Fund Company of the Year" and the "Golden Bull" awards. Many of our funds took away prizes at this event. Moreover, industry magazine Capital once again awarded Union Investment five stars in February 2016. This makes us the only fund company to receive this prestigious award every year since it was first awarded in 2003.

Dealing with the change in the markets

A volatile capital market, changing regulatory requirements and new customer demands are all challenges we are meeting successfully.

The international financial markets have been dominated by international monetary policy, the Brexit vote in the UK and the development of commodity prices over the past twelve months. The loose monetary policy of the European Central Bank and the statement of the US Federal Reserve that it intended to increase interest rates only cautiously had a particularly positive impact on the stock markets at the end of 2015. The markets recovered after a sharp drop in prices as a result of the decline in the price of oil at the beginning of 2016, which was accompanied by concerns over a global downturn. This was due to the betterthan-expected earnings season and satisfactory economic data. After the British unexpectedly voted to leave the European Union, there was a price slump at the end of June. However, this was more than compensated for later. In August and September, stock prices tended laterally, as the positive and negative reports were balanced. The takeover carousel also continued to turn. At the end of September, OPEC provided for a surprise with the announcement that it would put a cap on oil production, which had a positive effect on oil prices. Moreover, the monetary policy of the major central banks in the US, Japan and Europe repeatedly influenced the stock markets. However, the primary impact was on the direction of the bond markets. The dominant issue was whether and when the US Federal Reserve Bank would finally take the next rate-hike step. As it has so far not taken such a step, the US bond markets have been on the rise. The picture is different in Europe: the European Central Bank supported the markets with its broad bond purchase programme, which included corporate bonds starting from June 2016. The bond market also recorded growth here. Higher interest-bearing securities, such as corporate and emerging market bonds, benefited significantly from the absence of a US interest rate hike and the investor search for positive returns.

Bond markets largely determined by monetary policy

The primary influence on the global bond markets was the monetary policy of the major central banks. In Europe, the fragile economic environment and very low inflation led the European Central Bank to take further expansive monetary policy measures. The key interest rate was reduced to zero, and the deposit rate to minus 0.4 per cent. Besides additional long-term tenders, an increase of EUR 80 billion monthly for the bond purchase programme was decided. In addition, the ECB has also been buying European corporate bonds from the industrial sector since the beginning of June 2016. In the prevailing low-interest rate environment, the majority of German federal securities were in the negative yield range - including up to 10-year maturities at the end of the year. In the spring of 2016, the finance ministers were tempted to issue debt under the longest possible conditions at low rates, issuing securities with maturities of 30, 50 and even 100 years. At the end of June, the British unexpectedly voted to leave the European Union. Immediately after that, the "safe havens", i.e. government bonds from core Europe, were in particularly high demand. In this environment, ten-year federal bonds hit a new low yield of around minus 0.2 per cent. Low trading volumes made for sluggish trading in the summer. Government bonds trended mainly laterally. Slightly improved economic data in the eurozone, difficulty forming a government in Spain and problems in the Italian banking sector were offset by the purchases of the central bank. Measured by the iBoxx Euro Sovereign Index, European government bonds rose 6.8 per cent at the end of the year. Bonds from the core countries slightly outperformed securities from the peripheral countries.

Performance on the US bond market was initially characterized by speculation on changes in US interest rates, which began in December 2015. The Fed actually intended to follow up with four additional steps in 2016, but the monetary authorities hesitated because of weak economic data. In view of the uncertain data situation, US rate hikes were repeatedly priced in and out, and ultimately postponed. After the British voted to leave the EU on 23 June, the market no longer assumed that there would be a US rate hike this year. Meanwhile, the probability of a rate hike by year end is estimated to be around 70 per cent. This is due to unexpectedly robust economic data from the US in recent weeks. US bonds gained 4.4 per cent over the past twelve months as measured by the JP Morgan Global Bond US Index.

The market for European corporate bonds initially trended laterally. At the beginning of the year, activity was hurt by concerns about subordinated financial sector securities. From spring onwards, the mere intention of the ECB making concrete bond purchases initially provided massive support starting in June. In late summer, the first companies managed to refinance at negative returns. Measured by the BofA Merrill Lynch Euro Corporate Index, ER00, corporate bonds rose 7.4 per cent. Securities from the emerging economies performed very positively as a result of rising commodity prices and the absence of US interest rate hikes. High inflows of funds also provided support. In view of the continuing low interest rate environment, many investors have been seeking returns in the emerging markets. A strong gain of 16.2 per cent was recorded at the index level (JPMorgan EMBI Global Diversified Index).

Stock markets with growth, on balance

Last year, the global stock markets went on a real roller coaster ride - with a positive outcome. Growth concerns in Europe, the US and China, uncertainty about the course of Fed policy, oil price weakness and the Brexit vote in the UK were the determining factors. The MSCI World Index made gains of 8.2 per cent overall, measured in local currency.

In the eurozone, the EURO STOXX 50 dropped by 3.2 per cent during the period under review. The benchmark German DAX increased by 8.8 per cent. At the end of 2015, the eurozone markets benefited significantly from additional easing measures implemented by the European Central Bank. It decided to extend the bond purchase programme and reduce the deposit rate. Concerns about economic development and the Brexit referendum in the UK unsettled market participants at the beginning of 2016. While markets temporarily moved upwards again as the ECB further eased its monetary policy orientation, the Brexit decision on 23 June pulled the markets clearly down into the red. Against the background of positive economic data, which did not yet take into account the effects of the planned exit from the EU by the British, there was a strong countermovement in July and August. Support also came from the robust quarterly results of many companies as well as brisk takeover activity. In September it fell slightly. At its last meeting, the European Central Bank had initially decided against further monetary policy measures, which disappointed market participants.

In the US, the Fed increased its benchmark interest rate in December 2015 for the first time since 2006. After previous scepticism about the further interest rate path, markets responded positively to the move. However, as a result of weak figures from industry and spotty quarterly corporate data, companies initially began to fear that economic momentum could fade. Further complications came in the form of the continuously falling oil price at the beginning of the year, as well as uncertainty about future monetary policy. The situation improved as the oil price rose and the Fed refrained from making rapid rate hikes. With the Brexit vote, which also weighed on the US stock exchanges, the next rate hike by the Fed seemed to have moved far into the distance. In July, there was again upwards movement thanks to a buoyant corporate reporting season. After that, the issue of a Fed rate hike later this year came to the forefront again. Overall, the broad market S&P 500 Index gained 12.9 per cent from October of last year. At the same time, the Dow Jones Industrial Average Index climbed by 12.4 per cent.

In Japan, the Nikkei 225 Index fell by 5.4 per cent. There as well, after a buoyant start, economic concerns had broadened since the beginning of 2016. The sustained strength of the yen had a particularly strong negative impact. The Brexit vote at the end of June proved to be an additional negative factor that pushed the yen exchange rate even further upwards. In July and August, a new asset purchase programme put in place by the Bank of Japan provided for a recovery. At the beginning of August, the government added an economic stimulus package of over 118 billion euros to support the domestic economy. The Bank of Japan announced further unconventional monetary policy measures in September. The stock market trended slightly weaker again.

The stock markets of the emerging countries turned in a solid performance against the backdrop of the continued loose US interest rate policy and rising commodity prices. The prospect of a further delay of any US interest rate hikes had a generally positive effect. The MSCI Emerging Market Index added 10.3 per cent in local currency.

Important information:

Unless otherwise specified, the data source for the financial indices is Datastream. All unit performance data on the following pages is taken from Union Investment's own calculations in accordance with the method applied by the German Investment Funds Association (BVI), unless otherwise specified. The ratios illustrate past performance. Future results may be either higher or lower.

Detailed information on the Investment Company and the Depositary of the investment fund (the "Fund") can be found on the last pages of this report.

Investment objective, investment policy and significant events

UniKapital is a bond fund focusing on interest-bearing euro securities from domestic and foreign issuers. At least 51 per cent of its assets must be held in debt instruments such as bonds. In addition, up to 49 per cent of the Fund's assets may be invested in money market instruments and bank deposits. Derivatives may also be used for investment and hedging purposes. The Fund's assets are currently invested giving preference to bonds denominated in euros with short maturities or fixed interest rates, concluded with governments, companies or other institutions. Positions may also be entered into in bonds denominated in a foreign currency. The investment policy aims to achieve returns in line with the market as well as long-term capital growth.

Portfolio structure and main changes

UniKapital preferably invested its assets in bond-oriented investments during the previous financial year. The bond share was actively managed through the use of bond futures and temporarily amounted to up to 132 per cent of the Fund's assets. The share in bond-oriented investments amounted to 108 per cent (including derivatives) of the Fund's assets at year-end.

From a regional perspective, bond investments in eurozone countries amounted to 69 per cent and represented a clear investment focus. This was followed by positions in European countries outside the eurozone at 11 per cent of bond-oriented investments at the end of the financial year. Smaller exposures in emerging markets and Japan rounded off the regional structure.

From an industry perspective, investments in government and government-related bonds dropped from an initial 70 per cent to 57 per cent. By contrast, investments in corporate bonds (corporates) increased to 37 per cent at the end of the financial year. Industry bonds represented the most important bond class with 19 per cent followed by financial bonds constituting 18 per cent of bond-oriented investments at the end of the financial year.

The average credit rating of the portfolio during the financial year was constant at A-. The average duration dropped to 1 year and 6 months. The average return at the end of the reporting period was 0.27 per cent.

Main risks to the investment fund

Due to bond investments, the Fund was subject to market price risks throughout the entire reporting period. Furthermore, counterparty risks existed due to investments in corporate bonds. In addition, risks were entered into by investing in emerging markets.

Fund result

The main sources of the sales result during the reporting period were profits from the sale of an Australian government bond. The biggest losses resulted from the sale of Italian and Spanish government bonds.

The main sales results were determined using transaction-based analyses. Consequently, these figures may differ from the realised gains and losses shown in the profit and loss account.

UniKapital posted a 0.48 per cent increase in value over the reporting period (according to the BVI method).

The indicated values may deviate from the statement of assets due to a risk-based approach.

Additional Notes

Information about transactions within the group

Securities transactions are only ever carried out with counterparties, which were included in a list of approved parties by the fund management. The composition of this list is reviewed on an ongoing basis. Criteria such as the execution quality, the level of transaction costs, research quality and reliability during the processing of securities transactions are given priority. Furthermore, the annual reports of the counterparties are inspected.

The proportion of securities transactions conducted during the period under review (October 1st, 2015 to September 30th, 2016) on account of the retail funds managed by Union Investment Privatfonds GmbH with companies within the group or associated with it through significant holdings amounted to 5.58 per cent. The total transactions volume amounted to 3,306,275,349.56 Euro.

Details of the asset valuation procedure

Generally speaking, where a security was traded on several markets, the market's most recently available tradable price with the highest level of liquidity was applied.

The market value determined and notified by the issuer of the respective asset or a counterparty or other third party was used for assets for which no tradable price could be determined insofar as this value could be validated with a second reliable and current price source. The regulations laid down were documented. Market values were determined for assets for which no tradable price could be determined and no the the current price source and the second reliable and current price source is a counterparty or other third the reliable and current price sould be determined, such values were based on careful estimates and appropriate valuation models, while taking account of the current market factors. The market value refers to the amount at which the relevant asset could be exchanged in a transaction involving expert and independent business partners who are willing to enter into an agreement. The evaluation processes used were documented in detail internally, and their suitability is examined at regular interval.

intervals

Units in domestic investment funds, ec-investment fund units and foreign investment fund units will be valued at their most recently determined redemption price, or for ETFs at their current market price. Cash held at banks will be valued at face value and liabilities at their repayment amount. Term deposits will be valued at face value and other assets will be valued at their market value or par value.

Information on transparency and the total expense ratio

The total expense ratio expresses all costs and payments incurred by the investment fund over the course of the year (excluding transaction costs) in relation to the average net asset value of the investment fund; it is reported as a percentage. 0.74 %

Total expense ratio

The total expense ratio is a single figure which is based on the figures for the reporting period from 01/10/2015 to 30/09/2016. It encompasses - in accordance with EU Regulation No. 583/2010 and § 166 para. 5 KAGB - all costs and payments incurred by the investment fund over the course of the year in relation to the average net asset value of the investment fund. The total expense ratio does not include transaction costs. It may vary from year to year.

The total expense ratio is also reported in the key investor information of the investment fund in accordance with section 166(5) KAGB and referred to under "ongoing charges", where a cost estimate may also be demonstrated. The estimated costs may differ from the total expense ratio reported here. The statements in the annual report are essential for calculating the total costs actually incurred in the reporting period

Performance-based compensation in % of the average net asset value

| · · · · | | |
|---|-----|-------------|
| Standard compensation paid to the investment company or third parties incl. income adjustment | EUR | -484,593.43 |
| Thereof for the investment company | | -39.22 % |
| Thereof for the depositary | | 76.50 % |
| Thereof for third parties | | 62.72 % |

The investment company does not receive any refunds from the remuneration and reimbursement of expenses paid from the investment fund to the depositary and third parties.

The investment company pays a significant amount of what is known as trail commission to brokers from the remuneration paid to it by the investment fund.

Issue surcharges and redemption discounts were calculated for the investment fund for the purchase and redemption of investment units:

An issue surcharge /redemption discount has not been charged to the investment fund for these investment units.

Rate of remuneration for management for investment units held in the investment fund

Information on employee remunerations

Description of how remuneration components are calculated

All employees

Remunerations are made up of the following integral parts:

1) Fixed remunerations: Overall total of basic monthly salaries paid out over the past business year, as well as the 13th month. 2) Variable remunerations: Overall total of the variable remuneration components paid out over the past business year. This includes the variable performance remunerations as well as special payments based on business results.

Risk-Takers

The overall remunerations of risk-takers are made up of the following integral parts:

 Basic salary: Overall total of basic monthly salaries paid out over the past business year.
 Variable remunerations of risk-takers: In addition to their basic salary, risk-takers will receive variable remunerations in accordance with the 'risk-taker model'.
 The basis for calculating the model is a target bonus for risk-takers, which is reset each year. This is multiplied by the target achievement rate. Said rate is derived from key multi-year indicators which include the overall results of the Union Investment Group (UIG), plus the segment results of UIG and the risk-taker's personal performance.
 The remunerations model is measured over several previous years, and payment of the variable remunerations is deferred over a minimum of three years. A proportion of this deferred payment is performance-related, as measured against company results. The aim of this remunerations model is to reduce the willingness to take risks by including long-term periods (both in the past and the future) when measuring real result-set measured against company results. The aim of this remunerations model is to reduce the willingness to take risks by including long-term periods (both in the past and the future) when measuring real result-set the sum of the remunerations model is to reduce the willingness to take risks by including long-term periods (both in the past and the future) when measuring real result-set the sum of the remunerations model is to reduce the willingness to take risks by including long-term periods (both in the past and the future) when measuring result result-set the sum of the remunerations model is to reduce the willingness to take risks by including long-term periods (both in the past and the future) when measuring result result-set the sum of the remunerations model is to reduce the willingness to take risks by including long-term periods (both in the past and the future) when measuring result result-set the sum of the remuneration set the remuneration remune said results and/or effecting payment. Therefore, the overall remunerations of risk-takers comprise their basic salary and variable earnings.

The remunerations committee conducted an annual review of the calculation; no irregularities were found

No fundamental changes were made to the remunerations systems.

Annual report 01.10.2015 - 30.09.2016

| Total employee remunerations paid by the investment company over the past financial year | EUR | 56,000,000.00 |
|--|-----|---------------|

1) For this investment unit a performance fee may possibly be charged.

2) Other material income (and other expenditures) in the sense of section 16(1.3.E) KARBV are income (or expenditures) of the type that make up 20% of the "other" income ("other" expenditures) line item and the "other" income ("other" expenditures) exceed 10% of the income (expenditures).

3) The variable remuneration refers to payments made in 2015.

4) Auditing duties have been delegated to Union Asset Management Holding AG.

Frankfurt am Main, November 30th, 2016

Union Investment Privatfonds GmbH

- The Management -

Statement of the independent auditor

To Union Investment Privatfonds GmbH

Union Investment Privatfonds GmbH has commissioned us with the task of auditing the annual report of the investment fund UniKapital for the financial year from October 1st, 2015 to September 30th, 2016 in accordance with section 102 of the investment code (KAGB).

Responsibility of the legal Representative

The legal representative of the investment management company is responsible for compiling the annual report in accordance with the provisions of the KAGB.

Responsibility of the auditor

It is our duty, based on our audit, to express an opinion on the annual report.

We conducted our audit in accordance with section 102 KAGB and in compliance with the German principles of proper accounting adopted by the Institut der Wirtschaftsprüfer (IDW). According to these principles, the audit must be planned and conducted in such a way that any inaccuracies or infringements that have a significant impact on the annual report can be recognized with reasonable certainty. Knowledge of the management of the Fund and expectations of possible errors will be taken into account when deciding how to conduct the audit. Within the audit, the effectiveness of the internal accounting monitoring system and the evidence for the information given in the annual report are mainly assessed on the basis of sample checks. The audit comprises the assessment of the accounting principles applied to the annual report and the significant estimates of the legal representative of the investment management company. We believe that our audit provides a reasonable basis for our opinion.

Audit opinion

According to our evaluation based on the findings at the time of the audit, the annual report for October 1st, 2015 to September 30th, 2016 meets the provisions of the law.

Eschborn/Frankfurt am Main, November 30th, 2016

Ernst & Young GmbH Auditors

Heist Auditor Eisenhuth Auditor

Separate notice for corporate investors

Adaptation of share earnings following European Court of Justice ruling in the STEKO Industriemontage GmbH case and the jurisprudence of the BFH to § 40a KAGG

In the case STEKO Industriemontage GmbH (C-377/07), the European Court of Justice (ECJ) has ruled that the 2001 KStG (Corporate Tax Act) regulation on the changeover from the corporate tax imputation system to the shareholder relief system is contrary to EU law. The ban preventing statutory corporations from making profit reductions effective (in relation to participation in foreign companies) with regard to tax in accordance with Sec. 8b (3) KStG, was already valid in 2001 in accordance with Sec. 34 KStG, while this was only valid for profit reductions with regard to participation in local companies in 2002. In the ECJ's opinion, this is contrary to the principle of free movement of capital.

In its judgement of October 28, 2009 (file ref. I R 27/08), the Federal Fiscal Court (BFH) decided that the STEKO jurisdiction shall generally be effective for the Fund investment. In a letter of the German Ministry of Finance dated February 1, 2011 "Application of the Federal Fiscal Court (BFH) judgement of October 28, 2009 - I R 27/08 for share gain ("STEKO jurisdiction")", the financial authorities stated in particular the conditions according to which it is possible to amend the share gains based on the STEKO jurisdiction. In its judgements of June 25, 2014 (I R 33/09) and July 30, 2014 (I R 74/12) and further to the resolution of the Federal Constitutional Court of December 17, 2013 (I BvL 5/08, BGBI I 2014, 255), the Federal Fiscal Court also decided that additions of negative share gains were not to be made based on § 40a of the Investment Companies Act (KAGG) in the version of the German Tax Reduction Act (StSenkG) of October 23, 2000 for the years 2001 and 2002 and that tax-free positive share gains were not to be offset against share losses. If an amendment has not already been made to investor share gains through the STEKO judgements, a corresponding amendment may be made in accordance with the Federal Fiscal Court (BFH) judgements. The financial authorities have yet to make a statement on this matter.

As far as potential measures based on the Federal Fiscal Court (BFH) judgements are concerned, we recommend that investors with units held as business assets consult a tax adviser.
