Authorised Corporate Director's Report

The Authorised Corporate Director (ACD) of M&G Investment Funds (3) presents its Interim Long Report and unaudited Financial Statements for the six months ended 31 December 2018.

The unaudited financial statements of M&G Investment Funds (3) and the investment report and unaudited financial statements and notes of each sub-fund are presented in their individual sections of this report as set out in the contents page.

Please note that we have included an explanation of key investment terminology in the 'Glossary' (at the back of this report).

Company information

M&G Investment Funds (3) is an umbrella Open-Ended Investment Company (OEIC) and contains nine sub-funds, hereinafter referred to as 'funds' in the rest of this report. Each fund is a UCITS (Undertakings for Collective Investment in Transferable Securities) scheme as defined in the Collective Investment Schemes sourcebook, as issued (and amended) by the Financial Conduct Authority (FCA). This OEIC is an Investment Company with Variable Capital (ICVC) incorporated under the Open-Ended Investment Companies Regulations 2001. It is authorised and regulated by the FCA under the Financial Services and Markets Act 2000.

The Company was authorised on 8 August 2001 and was launched on 7 March 2002, following the conversion of a series of authorised unit trusts.

The Company's principal activity is to carry on business as an OEIC. The Company is structured as an umbrella company, and different funds may be established by the ACD from time to time with the agreement of the Depositary and approval from the FCA. The funds are operated separately and the assets of each fund are managed in accordance with the investment objective and policy applicable to that fund.

As at 31 December 2018 none of the funds held shares of the other funds within this OEIC.

A shareholder is not liable for the debts of the Company and will never be liable to make any further payment to the Company after paying the purchase price of the shares.

Important information

Following successful extraordinary resolutions at shareholder meetings held on 4 October 2018, the mergers of the non-sterling share classes into each equivalent sub-fund in the M&G (Lux) Investment Funds 1 took place on various dates. The effective date of the merger for the M&G Emerging Markets Bond Fund into the M&G (Lux) Emerging Markets Bond Fund was 7 December 2018. The effective date of the merger for the M&G European Corporate Bond Fund into the M&G (Lux) European Corporate Bond Fund was 9 November 2018. For further details of the mergers, please refer to www.mandg.com/brexitmergerdocumentation.

At the shareholder meeting the merger of the non-sterling share classes from M&G European High Yield Bond Fund into the M&G (Lux) Global High Yield Bond Fund was approved. Approval was also granted for the merger of the sterling share classes into M&G Global High Yield Bond Fund, a sub-fund of M&G Investment Funds (2) with the exception of Sterling Class 'I' and 'X' share classes voting to remain. The effective date of the merger for the M&G European High Yield Bond Fund was 25 January 2019.

On 6 August 2018, the Euro 'C' Income share class, Swiss franc 'A-H' share classes and US dollar 'C-H' share classes closed within the M&G European High Yield Bond Fund.

On 28 September 2018, the Depositary changed from National Westminster Bank Plc, to NatWest Trustee & Depositary Services Limited

Authorised Corporate Director's Report

Authorised Corporate Director's Responsibilities

The Authorised Corporate Director (ACD) is required to prepare annual and interim long reports for the Company. The ACD must ensure that the financial statements, contained in this report, for each of the funds are prepared in accordance with the Investment Association Statement of Recommended Practice for Financial Statements of UK Authorised Funds (SORP) and UK Financial Reporting Standards, and give a true and fair view of the net revenue or expenses and net capital gains or losses for the accounting period, and the financial position at the end of that period.

The ACD is required to keep proper accounting records, and to manage the Company in accordance with the Collective Investment Schemes sourcebook, as issued (and amended) by the FCA, the Instrument of Incorporation and the Prospectus, and to take reasonable steps for the prevention and detection of fraud or other irregularities.

Directors' statement

This report has been prepared in accordance with the requirements of the Collective Investment Schemes sourcebook, as issued and amended by the Financial Conduct Authority.

G N COTTON
L J MUMFORD

13 February 2019

Financial statements and notes

The financial statements for M&G Investment Funds (3) comprise the individual financial statements for each fund and the notes below.

Notes to the financial statements

Accounting policies

The interim financial statements have been prepared on the same basis as the audited financial statements for the year ended 30 June 2018. They are prepared under the historical cost convention, as modified by the revaluation of investments, and in accordance with the Statement of Recommended Practice (SORP) for Authorised Funds issued by the Investment Association in May 2014.

Authorised Corporate Director's Report

Investment objective

The fund aims to provide income and capital growth.

Investment policy

At least 70% of the fund is invested in sterling-denominated corporate debt instruments. The fund's exposure to corporate debt may be gained through the use of derivatives. Derivatives may also be used for efficient portfolio management. Any currency exposures within the fund may be managed by currency hedges into sterling. The fund may also invest in collective investment schemes, other transferable securities and other debt instruments (including corporate debt and government and public securities denominated in any currency), cash, near cash, other money market securities, warrants and other derivative instruments.

Investment approach

The fund's strategy is based on the principle that corporate bond market returns are driven by a combination of macroeconomic, asset, sector and stock-level factors. As different factors dominate returns at different stages of the economic cycle, the manager applies a dynamic investment approach, changing the blend of duration and credit exposure in the portfolio to weight them appropriately.

The fund manager has the investment freedom to take a high-conviction approach when selecting credits for the portfolio. Diversification – across individual issuers as well as industries – is an essential element of the fund's strategy to limit the potential for losses in the event of default.

The fund's investment style combines top-down and bottom-up analysis, and the fund manager is assisted in the selection of individual credits by a large team of independent sovereign and public credit analysts.

Risk profile

The fund invests mainly in sterling-denominated fixed income securities, or bonds, issued by UK companies. It is primarily subject to the price volatility of the UK bond market as well as the performance of individual issuers. It is also influenced by developments in the broader global bond market. In addition, the fund is subject to fluctuations in currency exchange rates.

The fund's focus is on high-quality corporate bonds, securities that are normally traded with relative ease. Up to 20% of the fund may be invested in other fixed income investments, such as government bonds, which are typically highly liquid assets, or high yield corporate bonds, which are higher risk assets that could potentially experience a degree of illiquidity in times of market distress.

The fund's exposure to debt securities may be gained through the use of derivatives. In association with the use of derivatives, including those instruments not traded through an exchange, collateral is deposited in order to mitigate the risk that a counterparty may default on its obligations or become insolvent.

Portfolio diversification is key in managing liquidity and default risks as well as reducing market risk. The fund's risks are measured and managed as an integral part of the investment process.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the
 past and is based on historical data so may not be a reliable indicator of the future
 risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Investment review

As at 2 January 2019, for the six months ended 31 December 2018

Performance against objective

Between 2 July 2018 (the start of the review period) and 2 January 2019, the M&G Corporate Bond Fund delivered a small negative total return (the combination of income and growth of capital) in its sterling share classes, broadly in line with the average return of its peers. Returns for the fund's euro share classes were lower, the result of sterling weakness against the euro over the period*.

The M&G Corporate Bond Fund invests predominantly in high-quality, sterling-denominated corporate bonds, with the aim of providing income and capital growth.

Bonds are loans that are extended by an investor to an issuing entity – such as a company or government – in exchange for regular interest payments. The initial amount borrowed by the entity is usually repaid at the end of the loan's life. Bonds issued by companies are referred to as 'corporate bonds', while those issued by governments are called 'government bonds'. Investment grade corporate bonds refer to debt securities issued by a company with a medium or high credit rating from a recognised credit rating agency. They are considered to be at lower risk of non-repayment than those issued by companies with lower credit ratings (known as high yield bonds). The performance of investment grade corporate bond markets can be influenced by the performance of government bonds.

* For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Fund performance' section of this report.

Authorised Corporate Director's Report

Investment review

Investment performance

Volatility returned to financial markets in 2018, as a result of a range of factors that included higher interest rates and inflation, political uncertainty and global trade tensions.

The US Federal Reserve raised interest rates in September and December, making it a total of nine times US rates have risen since the great financial crisis about a decade ago. In the UK, much uncertainty remained about the eventual terms of the country's Brexit deal with the European Union (EU). This contributed to times of adverse sentiment towards UK bonds. Elsewhere, investors in Europe became concerned towards the end of the period about Italian proposals to increase the country's budget deficit. The plans, which met with opposition from the EU, were drafted after an anti-establishment party gained a strong presence in Italy's new coalition government.

Meanwhile, sentiment towards corporate bonds – and international stockmarkets – became increasingly affected by concerns of a trade war developing between the US and China. In addition, during the latter months of the year, global economic growth forecasts began to moderate, which contributed to some weaker confidence in the outlook for corporate bonds and emerging markets.

These more challenging conditions led to losses across many parts of the bond market over the six-month period. Sterling and euro-denominated investment grade corporate bonds generally suffered more than US dollar-denominated corporate bonds, while high yield corporate bonds declined more notably.

The fund's performance was driven by its sizeable exposure to investment grade corporate bonds (fixed income securities issued by a company with a medium or high credit rating from a recognised credit rating agency, which are considered to be at lower risk from default than those issued by companies with lower credit ratings) and to assetbacked securities (bonds whose income payments are derived from a specified group of underlying pooled assets).

The fund's allocation (just over 20%) to US dollar-denominated corporate bonds was beneficial, as these generally performed better than their sterling equivalents over the six months, as was its relative lack of exposure to sterling-denominated bonds issued by financials versus a comparable index. However, the fund's relative lack of sensitivity to changes in interest rates (known as 'duration') constrained performance.

Investment activities

One of the key drivers of a bond fund's performance is its ability to adjust the portfolio's sensitivity to changes in interest rates, known as 'duration'. Being shorter duration means that a fund is relatively less sensitive to changes in interest rates than longer duration funds. During the course of the reporting period, we held the fund's duration close to its maximum permitted short position versus a comparable index, the iBoxx £ Corporate Index.

We once again took advantage of opportunities to add value through relative value trades – for example, taking advantage of the difference in pricing between bonds from the same company issued in different currencies or different maturities – during the review period. In August, for example, we switched a position in Aviva to a slightly longer dated sterling denominated bond from the same issuer. In October, we switched some US dollar-denominated positions into equivalent sterling ones, primarily in the telecoms sector.

After a significant sell-off in corporate bond markets towards the end of 2018 caused prices to fall, we have been happy to add some credit risk back into the portfolio. In December, for example, we sold some good-quality names that had performed well, for example Goldman Sachs and Apple, in order to buy into selected good value credits such as Sky and WPP Group.

We continue to think that UK government bonds (also known as gilts) look expensive and so we have little exposure to these assets.

Outlook

In our view, monetary policy pursued by the core central banks over the past decade has worked and the world has normalised. Interest rates are the only part not to have yet returned to 'normal', although rates in the US are not too far off.

Monetary policy works with a lag. We can see this in the labour market, where wages were high in 2007-2008 off the back of a strong global economy in 2005-2006. There are clear signs that the US labour market is now overheating, which will drive pay higher. Both the US and UK are services-dominated economies and as a result, when wages rise, so does inflation.

While the UK is at a different stage in the cycle to the US from a monetary policy perspective due to Brexit, the two are in a similar place from an economic standpoint.

Our main concern at present is less about an imminent US recession. Rather, we worry that if the financial system is truly different since the great financial crisis – as many have argued – when central banks do eventually need to put on the brakes, they may need to put them on harder than before. At the same time, we remain vigilant about any further escalation in global trade tensions.

Regardless of how these situations develop, what we do as fund managers does not change. We look at where we are in the interest rate cycle and the economic cycle, and we look at where we can find the most attractive opportunities for the fund from different sectors and individual issuers at any given stage.

Richard Woolnough

Fund manager

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

The following chart and tables show the performance for two of the fund's share classes – Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

We show performance for these two share classes because:

- The performance of the Sterling Class 'A' (Accumulation) share is what most individuals investing directly with M&G have received. It has the highest ongoing charge of all the sterling share classes. Performance is shown after deduction of this charge. All UK investors in the fund therefore received this performance or better.
- The performance of the Sterling Class 'I' (Accumulation) share is the most appropriate to compare with the average performance of the fund's comparative sector. It is the share class used by the Investment Association in the calculation of the comparative sector's average performance. This share class is available for direct investment with M&G subject to minimum investment criteria, or via third parties who may charge additional fees. The performance shown takes the deduction of the ongoing charge for this share class into account but it does not take account of charges applied by any other party through which you may have invested.

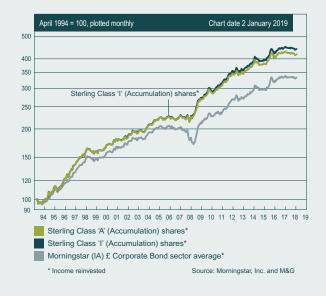

The fund is available for investment in different share classes, each with varying levels of charges and minimum investments; please refer to the Prospectus for M&G Investment Funds (3), which is available free of charge either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Fund level performance

Fund net asset value			
as at	31.12.18 £'000	30.06.18 £'000	30.06.17 £'000
Fund net asset value (NAV)	3,617,578	3,696,143	4,127,165

Performance since launch

To give an indication of how the fund has performed since launch, the chart below shows total return of Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

The fund's Sterling Class 'I' (Accumulation) shares were launched on 2 July 2007. Performance data shown prior to this date is that of the fund's Sterling Class 'A' (Accumulation) shares.

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period. Calculated on a price to price basis with income reinvested.

Long-term performance by share class					
	Six months 02.07.18 % [a]	Three years 04.01.16 %p.a.	Five years 02.01.14 %p.a.	Since launch %p.a.	
Euro [b]					
Class 'A'	-2.7	-3.5	+2.3	+3.7 [c]	
Class 'C'	-2.3	-2.8	+3.1	+4.2 [c]	
Sterling [d]					
Class 'A'	-0.5	+3.3	+4.0	+6.0 [e]	
Class 'I'	-0.2	+3.7	+4.4	+6.3 [f]	
Class 'R'	-0.4	+3.5	+4.2	+3.9 [9]	
Class 'X'	-0.5	+3.2	+3.9	+5.8 [h]	

- [a] Absolute basis.
- [b] Price to price with gross income reinvested.
- [c] 29 November 2002, the launch date of the share class.
- [d] Price to price with income reinvested.
- [e] 15 April 1994. All performance data prior to 11 March 2002 (the launch date of the share class) has been calculated by reference to a conversion factor due to a change of the nominated share class.
- $\ensuremath{\mathit{[f]}}\xspace$ 2 July 2007, the launch date of the share class.
- [g] 3 August 2012, the launch date of the share class.
- [h] 15 April 1994, the end of the initial offer period of the predecessor unit trust.

Financial highlights

Fund performance

Operating charges and portfolio transaction costs

We explain below the payments made to meet the ongoing costs of investing and managing the fund, comprising operating charges and portfolio transaction costs.

Operating charges

Operating charges include payments made to M&G and to providers independent of M&G:

- Investment management: Charge paid to M&G for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid to M&G for administration services in addition to investment management – any surplus from this charge will be retained by M&G.
- Oversight and other independent services: Charges paid to providers independent of M&G for services which include depositary, custody and audit.
- Ongoing charges from underlying funds: Ongoing charges on holdings in underlying funds that are not rebated.

The operating charges paid by each share class of the fund are shown in the following performance tables. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of share classes may differ, and therefore the operating charges may differ.

Operating charges are the same as the ongoing charges shown in the Key Investor Information Document, other than where an estimate has been used for the ongoing charge because a material change has made the operating charges unreliable as an estimate of future charges.

For this fund there is no difference between operating charges and ongoing charges figures, unless disclosed under the specific share class performance table.

Portfolio transaction costs

Portfolio transaction costs are incurred by funds when buying and selling investments. These costs vary depending on the types of investment, their market capitalisation, country of exchange and method of execution. They are made up of direct and indirect portfolio transaction costs:

- Direct portfolio transaction costs: Broker execution commission and taxes.
- Indirect portfolio transaction costs: 'Dealing spread' the
 difference between the buying and selling prices of the fund's
 investments; some types of investment, such as fixed interest
 securities, have no direct transaction costs and only the dealing
 spread is paid.

Investments are bought or sold by a fund when changes are made to the investment portfolio and in response to net flows of money into or out of the fund from investors buying and selling shares in the fund.

To protect existing investors, portfolio transaction costs incurred as a result of investors buying and selling shares in the fund are recovered from those investors through a 'dilution adjustment' to the price they pay or receive. As the fund invests mainly in fixed interest securities, the direct transaction costs paid on other investments are too small to be reflected in the table below. To give an indication of the indirect portfolio dealing costs the table below shows the average portfolio dealing spread.

Further information on this process is in the Prospectus, which is available free of charge on request either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Portfolio transaction costs				
as at Indirect portfolio transaction costs	31.12.18 %	30.06.18 %	30.06.17 %	Average [a] %
Average portfolio dealing spread	0.85	0.72	0.70	0.76

[a] Average of first three columns.

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for distribution to Income shares, the annual management charge and administration charge are offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Marginal tax relief has not been taken into account in respect of expenses offset against capital.

M&G Corporate Bond Fund Financial statements and notes

Authorised Corporate Director's Report

Investment objective and policy

The fund invests mainly in a range of UK equities with the aim of achieving a steadily increasing income stream. The fund will target a yield higher than that of the FTSE All-Share Index. Subject to this, the aim will be to maximise total return (the combination of income and growth of capital).

Investment approach

The M&G Dividend Fund employs a bottom-up stockpicking approach, driven by the fundamental analysis of individual companies. The fund manager seeks to invest in companies with excellent capital discipline and long-term dividend growth potential. The fund manager believes rising dividends create upward pressure on the value of shares. Dividend yield is not the primary consideration for stock selection.

The fund manager aims to create a diversified portfolio with exposure to a broad range of sectors. He selects stocks with different drivers of dividend growth to construct a portfolio that has the potential to cope in a variety of market conditions. The fund invests with a long-term investment view and a typical holding period of three to five years.

Risk profile

The fund invests in the shares of UK-listed companies and is, therefore, subject to the price volatility of the UK stockmarket and the performance of individual companies. The fund's focus is on shares of companies that have the potential to grow their dividends over the long term. Income distributions from the fund's holdings, however, are not guaranteed and may vary. Diversification is therefore key in managing liquidity risk and reducing market risk. The fund's risks are measured and managed as an integral part of the investment process.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the
 past and is based on historical data so may not be a reliable indicator of the future
 risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Investment review

As at 2 January 2019, for the six months ended 31 December 2018

Distribution summary

Over the six-month review period, the fund distributed income of 0.80 pence per Sterling Class 'A' (Income) share. This distribution matches the payment made in the same period last year. The distribution represents a yield (distributed income as a percentage of the share price as at 2 January 2019) of 5.47% versus a yield of 4.45% for the FTSE All-Share Index, a comparative index, reflecting a yield premium of 22.9% for the fund.

The lack of a high dividend payout among the UK's largest companies has remained a recurrent theme, as large companies often struggle to increase their dividends when growth proves elusive or is simply more challenging, once companies have reached maturity. (Dividends represent a share in the profits of a company and are paid out to the company's shareholders at set times of the year.) Another recurrent theme has been Brexit, which represented a formidable headwind over the course of 2018, casting an enduring shadow over the UK stockmarket. The uncertainty surrounding Brexit's outcome has meant that many companies have lacked the visibility needed to make operational decisions.

The period under review stood in stark contrast to the first half of 2018, which had withstood the unexpected return of extreme market turbulence, also called volatility, in February, to subsequently deliver a strong recovery of the UK market. However, this temporary respite was to be short-lived. The market's benign mood turned sour and we witnessed a seemingly inexorable downward slide of investors' appetite for UK equities (company shares). The last quarter of the year was particularly painful, as investors' risk aversion increased to exceptional levels, almost irrespective of companies' underlying fundamentals. Anxiety levels were fuelled by an endless series of agonising political twists on the outcome of Brexit, concerns about slowing global growth, worries over the trade dispute between the US and China and the near-term evolution of US interest rates — all of which conspired to bring global financial markets to a bruising close. Volatility indeed had returned in 2018.

In this context, we continued to avoid stocks whose dividends are volatile as a result of their sensitivity to external factors – ultimately beyond their control – and continued to look for companies with sustainable earnings and financial discipline, with the aim of delivering a reliable dividend stream.

As a result, a majority of the fund's holdings delivered good dividend growth, in line with their long-term commitment. Dividends were particularly healthy across our financial holdings, with St. James's Place raising its payout by 20%, Jupiter Fund Management by over 16% and insurer Sampo delivering a 13% rise. Not all financials fared so well, however, as Lloyds Banking Group delivered a more moderate 7% dividend growth and HSBC Holdings kept its dividend flat.

Some of our real estate-linked holdings also delivered solid dividend growth, with UNITE Group, a student accommodation company, delivering an impressive uplift of 30%, while IWG, a temporary office provider, announced a less stellar, but still solid increase of nearly 12%.

Authorised Corporate Director's Report

Investment review

Distribution summary (continued)

Our holdings within food services registered resilient performances as well, with dividend increases of over 12% and 11% respectively for Compass Group and Hilton Food Group.

Not all of our holdings delivered growth, however, and we saw DS Smith cutting its dividend by 3% on the back of the capital increase linked to the acquisition of European competitor Europac, but we expect to see the company return to dividend growth next year.

Against this backdrop, we were happy with the overall dividend growth across the portfolio, considering the current economic context, and encouraged after a tougher year last year which saw distribution cut by 3%. We also maintained a yield above that of the FTSE All-Share Index while continuing to avoid highly leveraged companies (i.e. companies with high levels of debt). We remain selective about our dividend streams and endeavour to strike a sensible balance between long-term dividend progression and attractive valuations. This is in full recognition that the combination of a high yield and rising distribution is important to our investors. We remain committed to delivering on these twin income objectives.

The fund's distribution and distribution yield are shown in the 'Specific share class performance' tables in this report. The distribution is subject to changes in the market environment and there is no guarantee that the fund will increase the distribution in every reporting period.

Performance against objective

Between 2 July 2018 (the start of the review period) and 2 January 2019, the fund delivered a negative total return (the combination of income and capital growth) across all its share classes and lagged the FTSE All-Share Index, which registered a negative performance of -9.8% over the six-month period.

Over this period the fund did not achieve its objective of growing the distribution (albeit over a relatively short period) or generating capital growth. However, it did achieve its objective in terms of delivering a distribution yield above that of the FTSE All-Share Index. Over a longer period of five years, the fund has achieved all aspects of its objective.*

* For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Fund performance' section of this report.

Performance review

In a very challenging period for the UK stockmarket, healthcare was the only sector to produce a positive return, while telecommunications and technology also proved more resilient than the wider market. The worst performer for the period was industrials, while the consumer sectors, as well as oil & gas, also underperformed the index. For the fund, stockpicking within industrials, as well as the above-index position in the sector, led to the largest drag on relative returns. Stock selection within the consumer goods and basic materials sectors also weighed on relative performance, as did the below-index position in healthcare. On the upside, selection within consumer services, financials and technology was supportive.

From a stock-specific perspective, DS Smith was the largest detractor for the period under review – despite publishing strong operational results, the stock fell by nearly 40% during the period. This was primarily based on fears of overcapacity in the cardboard market. We believe, however, that these concerns are overdone in the short term, as the US market offers a roadmap for long-term consolidation and structurally higher returns in the European market. With regard to short-term operating performance, management confirmed that 70% of their customers are in the 'fast-moving consumer goods' (FMCG) segment – a stable sector – which means the company has high visibility over its order book. We also anticipate support from the growth of internet shopping and from consumers and retailers alike switching from single use plastic towards renewable, recyclable materials.

Other detractors included online gaming company GVC Holdings and packaging company Essentra. GVC was hurt by the UK government bringing forward previously announced plans to increase the level of taxation in the UK. We continue, however, to see significant potential in the US market as, in May 2018, the US Supreme Court repealed the 'Gambling Prohibition Act' which had prohibited online gaming and gambling. A number of US individual states have since legalised gambling on sporting events. GVC bolstered its 'first mover' advantage by striking an early and strategic deal with MGM resorts, which will enable it to combine MGM's brand and GVC's online capabilities. The biggest market in the world has just opened up yet valuations do not reflect this. We expect to see earnings and dividends continuing to grow over the next few years, along with the demand for online gaming.

With regard to Essentra, we have continued to engage with the company regularly and our meetings with senior management have given us comfort that the company is refocusing on its core business, which we think should bring a rebound in revenue and profitability. We see significant upside for the stock, as we anticipate that the company is at an inflexion point for a recovery in profits and believe that the recovery thesis remains intact.

On the upside, the fund's largest contributor was Luxembourg-based satellite company SES FDR. Having been one of our largest detractors during the previous review period, the company delivered strong turnaround performance, justifying our decision to hold on to the stock after a couple of quarters of disappointing performance.

Other supportive holdings included pharmaceutical company Roche Holding and insurance provider Admiral Group. Roche was boosted by the combination of a very strong set of results and investors' aversion to risk, which led to healthcare outperforming in the US and Europe alike. The resilience of Roche's product pipeline surprised investors who had anticipated the demise of some of the company's blockbuster drugs as their patents reached expiry. Finally, we believe Admiral will benefit as the motor insurance industry is structurally becoming more disciplined than it has been in previous cycles. Admiral has strong competitive advantages and a positive corporate culture which we believe has also accounted for a big part of its success.

Investment activities

We completed six new purchases and six complete sales during the period under review, consistent with our long-term investment horizon of three years or more. Our investment decisions are based on the detailed analysis of company fundamentals and the thorough assessment of valuation to determine whether a stock merits its place

Authorised Corporate Director's Report

Investment review

Investment activities (continued)

in the fund. Understanding corporate culture and strategy is another prerequisite to understanding the value creation that a company can potentially deliver. This entails regular meetings and engagement with senior management, as well as site visits to their operational facilities. It is through the methodical application of this iterative process that we aim to identify new ideas.

Over the period in review, we purchased shares in HSBC Holdings, Lancashire Holdings and St James's Place, thus increasing our positions in financial companies. We believe Lancashire Holdings, the Bermuda-based insurer, is mispriced and will offer growth opportunities without any need for additional financing thanks to its robust balance sheet and surplus capital. We think St James's Place has a unique business model within the asset management segment and believe the company will continue to deliver superior growth and returns.

Our investment in mining company Rio Tinto represented a tactical allocation to decrease our below-index positioning in materials, while Tritax EuroBox provides exposure to the fast-growing market of logistics and warehousing estates, which are benefiting from the strong growth of online retail.

Finally, market volatility gave us an opportunity to build a position in Unilever – one of the most stable, highest quality companies in our investment universe – at an advantageous valuation.

In terms of sales, we took profits on Prudential to rotate into more attractive opportunities elsewhere.

Other sales included Domino's Pizza, as the rollout of new locations was slower than expected. We also felt that the lack of stability in key management positions was likely to further increase the execution risk.

Outlook

What a difference a year makes. The FTSE All-Share Index had ended 2017 at an all-time high, despite ongoing macroeconomic uncertainties: lower forecasts for economic growth, the first interest rate increases in 10 years and inflation on the rise following Brexit-induced sterling weakness. In contrast, 2018 was a year of two halves which met a brutal end, as evidenced by the FTSE All-Share's near 10% plunge over the period under review.

We want to remind our investors that the UK stockmarket is not just UK-centric and that the punishment inflicted by investors on the UK market seems disproportionate. This is particularly so when we consider that its constituent companies are, for the most part, linked to international markets and opportunities, demonstrating that they reach well beyond the confines of the domestic economy.

With this in mind, we remain firmly focused on our mandate, which is the analysis of company fundamentals and valuation, in the conviction that these factors drive returns over the long term. In the current context, we believe the UK market continues to offer long-term significant growth opportunities and what will hopefully – retrospectively – reveal itself as a unique opportunity for stockpickers. Medium-sized companies in particular are still a source of attractive

opportunities, given their potential to deliver long-term growth for the benefit of shareholders, even among more domestically biased businesses. Selectivity, though, remains paramount.

We remain committed to our dividend growth strategy and our conviction-based approach, and believe that the cash-generative nature of the fund's holdings, their ability to grow dividends over the long term and their attractive valuation will be positive for the fund. The fund's current yield of 5.47% (as at 2 January 2019), which we aim to grow over time, offers, we believe, a favourable proposition for long-term investors.

Phil Cliff

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

The following charts and tables show the performance for two of the fund's share classes – Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

We show performance for these two share classes because:

- The performance of the Sterling Class 'A' (Accumulation) share is what most individuals investing directly with M&G have received. It has the highest ongoing charge of all the sterling share classes. Performance is shown after deduction of this charge. All UK investors in the fund therefore received this performance or better.
- The performance of the Sterling Class 'I' (Accumulation) share is the most appropriate to compare with the average performance of the fund's comparative sector. It is the share class used by the Investment Association in the calculation of the comparative sector's average performance. This share class is available for direct investment with M&G subject to minimum investment criteria, or via third parties who may charge additional fees. The performance shown takes the deduction of the ongoing charge for this share class into account but it does not take account of charges applied by any other party through which you may have invested.

The fund is available for investment in different share classes, each with varying levels of charges and minimum investments; please refer to the Prospectus for M&G Investment Funds (3), which is available free of charge either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Fund level performance

Fund net asset value

Fund net asset value (NAV)	1,073,116	1,204,479	1,288,318

Share class performance since launch

To give an indication of how the fund has performed since launch, the chart below shows performance of Sterling Class 'A' (Accumulation) shares and Sterling Class 'A' (Income) shares. With Accumulation shares, income received from an investment is reinvested, while with Income shares, the income is paid out to shareholders.

Ten-year performance

Please note that comparative data is not available from fund launch. Therefore a ten-year comparable performance chart is shown below.

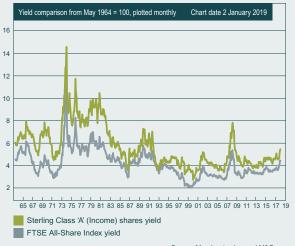

The fund's Sterling Class 'I' (Accumulation) shares were launched on 3 August 2012. Performance data shown prior to this date is that of the fund's Sterling Class 'A' (Accumulation) shares.

Financial highlights

Fund performance

Historic yield

The chart below shows the historic yield of Sterling Class 'A' (Income) shares against that of a comparative index.

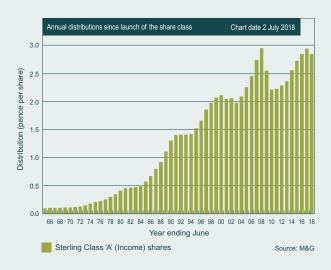

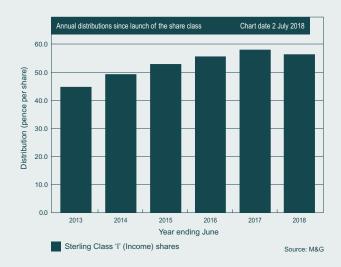

Source: Morningstar, Inc. and M&G

Historic yield: The historic yield reflects distributions declared over the past twelve months as a percentage of the mid-market price, as at the date shown. It does not include any preliminary charge and investors may be subject to tax on their distributions.

Distribution since launch

The charts below show the annual distribution of Sterling Class 'A' (Income) shares and Sterling Class 'I' (Income) shares since launch.

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period. Calculated on a price to price basis with income reinvested.

Long-term performance by share class					
	Six months 02.07.18	Three years 04.01.16	Five years 02.01.14	Since launch	
	% [a]	%p.a.	%p.a.	%p.a.	
Sterling [b]					
Class 'A'	-12.3	+0.4	+1.3	+10.7 [c]	
Class 'C'	-11.7	+1.9	+2.8	+5.2 ^[d]	
Class 'I'	-12.0	+1.1	+2.1	+5.2 [e]	
Class 'R'	-12.1	+0.9	+1.8	+4.9 [e]	
Class 'X'	-12.3	+0.4	+1.3	+6.3 [f]	

- [a] Absolute basis.
- [b] Price to price with income reinvested.
- [c] 6 May 1964, the end of the initial offer period of the predecessor unit trust.
- [d] 3 January 2006, the launch date of the share class.
- [e] 3 August 2012, the launch date of the share class.
- [f] 1 October 2002, the launch date of the share class.

Fund performance

Operating charges and portfolio transaction costs

We explain below the payments made to meet the ongoing costs of investing and managing the fund, comprising operating charges and portfolio transaction costs.

Operating charges

Operating charges include payments made to M&G and to providers independent of M&G:

- Investment management: Charge paid to M&G for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid to M&G for administration services in addition to investment management – any surplus from this charge will be retained by M&G.
- Oversight and other independent services: Charges paid to providers independent of M&G for services which include depositary, custody and audit.
- Ongoing charges from underlying funds: Ongoing charges on holdings in underlying funds that are not rebated.

The operating charges paid by each share class of the fund are shown in the following performance tables. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of share classes may differ, and therefore the operating charges may differ.

Operating charges are the same as the ongoing charges shown in the Key Investor Information Document, other than where an estimate has been used for the ongoing charge because a material change has made the operating charges unreliable as an estimate of future charges.

For this fund there is no difference between operating charges and ongoing charges figures, unless disclosed under the specific share class performance table.

Portfolio transaction costs

Portfolio transaction costs are incurred by funds when buying and selling investments. These costs vary depending on the types of investment, their market capitalisation, country of exchange and method of execution. They are made up of direct and indirect portfolio transaction costs:

- Direct portfolio transaction costs: Broker execution commission and taxes.
- Indirect portfolio transaction costs: 'Dealing spread' the
 difference between the buying and selling prices of the fund's
 investments; some types of investment, such as fixed interest
 securities, have no direct transaction costs and only the dealing
 spread is paid.

Investments are bought or sold by a fund when changes are made to the investment portfolio and in response to net flows of money into or out of the fund from investors buying and selling shares in the fund.

To protect existing investors, portfolio transaction costs incurred as a result of investors buying and selling shares in the fund are recovered from those investors through a 'dilution adjustment' to the price they pay or receive. The table below shows direct portfolio transaction costs paid by the fund before and after that part of the dilution adjustment relating to direct portfolio transaction costs. To give an indication of the indirect portfolio dealing costs the table also shows the average portfolio dealing spread.

Further information on this process is in the Prospectus, which is available free of charge on request either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Portfolio transaction costs

Average portfolio dealing spread	0.13	0.10	0.12	0.12		

[[]a] Average of first three columns.

[[]b] As a percentage of average net asset value.

[[]c] In respect of direct portfolio transaction costs. Please see the section above this table for an explanation of dilution adjustments.

Financial highlights

Specific share class performance

The following tables show the performance of each share class. All 'Performance and charges' percentages represent an annual rate except for the 'Return after operating charges' which is calculated as a percentage of the opening net asset value per share (NAV). 'Dilution adjustments' are only in respect of direct portfolio transaction costs.

Historic yields for the current period are calculated as at 11 January 2019.

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for reinvestment to Accumulation shares, all expenses with the exception of the annual management charge, administration charge and overdraft interest are offset against capital, increasing the amount available for reinvestment whilst restraining capital performance to an equivalent extent. In determining the amount available for distribution to Income shares, all expenses with the exception of overdraft interest are offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

In order to conduct a controlled dividend flow to shareholders, interim distributions will be at the fund manager's discretion, up to the maximum of the distributable income available for the period.

Marginal tax relief has not been taken into account in respect of expenses offset against capital.

Financial statements and notes

M&G Emerging Markets Bond Fund

Authorised Corporate Director's Report

Investment objective

The fund aims to maximise total return (the combination of income and growth of capital).

Investment policy

The fund invests mainly in debt instruments issued by emerging market borrowers, including government, government agency and corporate debt. There are no restrictions on the currencies to which the fund may be exposed. Derivatives may be used for investment purposes as well as for efficient portfolio management. The fund may also invest in collective investment schemes, other transferable securities (including other debt instruments), cash and near cash, deposits, warrants and money market instruments. M&G has the discretion to identify the countries that it considers to qualify as emerging markets although these will typically be those that the IMF or World Bank define as emerging or developing economies.

Investment approach

The fund's investment approach begins with a top-down assessment of macroeconomic factors such as global risk appetite and structural global growth catalysts. On a regional and country-specific level, factors such as monetary and fiscal policies, capital flows, and political and regulatory environments will be assessed. The result of this analysis will help inform the fund's country and currency allocations and its duration. Individual credit selection is determined by a thorough credit analysis and an assessment of valuations. Both macroeconomic and stock-specific analysis is undertaken in close conjunction with the deputy fund manager and the internal credit analysts. The fund is diversified by investing in a range of assets across global emerging markets and is unconstrained by a benchmark with a flexible strategy.

Risk profile

The fund invests mainly in fixed income securities, or bonds, issued by governments and companies in emerging markets. It can also invest in emerging market currencies. It is, therefore, subject to the price volatility of the global bond market and the performance of individual issuers. The fund is also subject to fluctuations in currency exchange rates.

The fund's focus is on emerging markets, and hence it may be more volatile compared to a fund that invests mainly in the securities of companies in developed countries. The reasons for this greater volatility include: the financial infrastructure in emerging markets is typically less mature, the regulatory systems and disclosure standards are less developed and adverse market and political circumstances are more likely to occur in these markets.

The fund may use derivatives to achieve the manager's desired exposure to emerging market bonds and currencies. In association with the use of derivatives, including those instruments not traded through an exchange, collateral is deposited, in order to mitigate the risk that a counterparty may default on its obligations or become insolvent.

Portfolio diversification is key in managing liquidity and default risks as well as reducing market risk. The fund's risks are measured and managed as an integral part of the investment process.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the
 past and is based on historical data so may not be a reliable indicator of the future
 risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- · has not changed during this period.

Investment review

As at 2 January 2019, for the six months ended 31 December 2018

Performance against objective

Between 2 July 2018 (the start of the review period) and 2 January 2019, the different share classes of the M&G Emerging Markets Bond Fund delivered varied performance.

The returns of the fund's sterling unhedged share classes were positive, helped by modestly positive returns across the main segments of the emerging markets bonds. In addition, the fund maintained a sizeable exposure to the US dollar, which gained in value against sterling and provided some further upside to the sterling unhedged share classes.

On 7 December 2018, the fund's non-sterling share classes were transferred to a new Luxembourg-authorised SICAV, M&G (Lux) Emerging Markets Bond Fund, which launched on 17 September 2018. Between 2 July 2018 and 7 December 2018, these non-sterling share classes delivered mixed returns. This outcome largely resulted from some relevant currency movements that influence the returns of these share classes.

Over the review period, therefore, the fund delivered a mixed performance against its objective, which is to maximise total returns (the combination of income and capital growth). Over three and five years and since launch, the fund delivered a positive total return across different share classes*.

* For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Fund performance' section of this report.

Investment performance

A number of global factors held back returns in emerging market bonds during the six months under review. These included actual and anticipated higher interest rates in the important US economy, as well as heightened trade tensions between the US and China.

M&G Emerging Markets Bond Fund

Authorised Corporate Director's Report

Investment review

Investment performance (continued)

In bond markets, actual or expected rises in interest rates typically hamper performance. Bonds are loans in the form of a security, usually issued by a government – government bonds – or company – corporate bonds – which normally pay a fixed rate of interest over a given time period, at the end of which the initial amount borrowed is repaid. Bond prices move inversely to their yields (the annual interest received on the bond as a percentage of its price). Given the size and relevance of the US market in a global context, the effects of US interest rate moves can be felt internationally, including in emerging markets.

In addition, international trade concerns increased as President Trump's administration imposed new tariffs on an expanded range of imported goods from China. This prompted retaliatory moves by the government in Beijing. Such anti-free trade measures are generally viewed as harmful for emerging countries, for which export revenues are often important. While this theme remained a focal point as 2018 ended, both countries agreed in December to refrain from imposing any further tariffs for three months. They also scheduled new talks in the new year to address their trade dispute.

More generally, global economic growth forecasts began to moderate towards the end of 2018, which further weighed on sentiment towards many areas of the global financial markets, including emerging market bonds.

Several emerging markets also faced their own specific economic challenges. These included Turkey, whose debt levels and deteriorating political relations with the US contributed to a sharp fall in the value of its currency. In Argentina, policy mistakes by the central bank were largely blamed for a deterioration in the country's finances, which compelled the government to seek assistance from the International Monetary Fund (IMF). Also in Latin America, political uncertainty returned in Brazil as it prepared for a general election in October. However, the victory of Jair Bolsonaro in the contest was well received in financial markets, and Brazilian assets rallied after the result

Despite the variety of challenging economic and political themes, emerging market bonds recorded modestly positive returns in the period, with improved performance delivered from these assets later in 2018. This improvement appeared to have been helped by softer rhetoric from the US Federal Reserve regarding further interest rate rises, as well as confirmation from the US and China about ceasing levying new tariffs for now.

In the fund, we maintained a preference throughout the period for investing in a diversified way across emerging market regions. The fund's allocations consisted of government and corporate bonds denominated in local currencies or 'hard' currencies such as the US dollar or euro.

Investment activities

Overall, our investment strategy continued to reflect our belief that investing in the right mix of local and hard currency government and corporate bonds is key to delivering performance in the fund. Going into the review period, the fund's asset allocation was local currency government bonds 29.8%, hard currency government bonds 40.7%, hard currency corporate bonds 23.7%, and local currency corporate bonds 5.3%

As always, we looked to evaluate if periods of weaker performance and, therefore, lower bond prices, offered potential long-term buying opportunities. Within this approach, our investment activity included adding some exposure to real estate issuers in China. While avoiding investments in China for some time, we felt valuations in this segment of the market started to look attractive after a period of underperformance. In other sectors, we added a position in China's Fufeng Group, a significant provider of flavour enhancers in the food industry.

Elsewhere, we sold a position in Bahrain's Oil and Gas Authority in July as we reassessed its outlook and took a less favourable view on the holding. Subsequently, however, we bought newly issued bonds from Tabreed, an energy-related group in the United Arab Emirates, based on our opinion that the securities were attractively priced.

Among emerging market government bonds, our transactions included selling out of the fund's local currency holding in South Africa during August. This largely reflected our view that sentiment towards the rand faced increased difficulties amid a weaker economic outlook in South Africa. Elsewhere, our investment assessment improved towards local currency government debt in Turkey, given factors such as the significant decline of the lira. Consequently, we bought Turkish lira-denominated government bonds and, later in the review period, we added US-dollar denominated government bonds in Turkey.

We continued to monitor all areas of the market for buying opportunities after the marked declines among emerging market assets during the opening months of the period. In November, our purchases included some corporate positions in Latin America, including bonds from Mexican energy group Pemex as we felt their valuation levels were appealing at lower price levels. We also increased the fund's holding of bonds issued by Tocumen International Airport in Panama City. These investments were funded largely as we took profits from the fund's position in Brazilian foods group BRF.

In the final quarter of 2018, our purchases also included euro-denominated government bonds in Romania and Montenegro, while we sold US dollar-denominated bonds from the government of Morocco.

At the end of December, the fund was invested around 40% in hard currency government bonds, 25% in local currency government bonds and around 27% in emerging market hard currency corporate bonds. The remainder of the fund was held in local currency corporate bonds and cash.

Outlook

Higher US interest rates and ongoing international trade tensions remained key considerations in emerging market bonds towards the end of 2018. These factors also contributed to some forecasts of slower global economic growth, including from large financial institutions such as the IMF.

Against this backdrop, however, we believe that lower prices in some areas of emerging market bonds during the review period left some securities looking fairer value — an assessment that we felt was supported by their attractive relative yields. Generally, emerging market bonds offer higher yields relative to other parts of the global bond markets for taking on higher degrees of risk.

Among other relevant themes, we believe that the creditworthiness of corporations in emerging markets remains resilient or is improving. We continue to favour holding an allocation to emerging market corporate bonds on a selective basis.

Authorised Corporate Director's Report

Investment review

Outlook (continued)

We also maintain a preference for holding globally diversified exposures to hard and local currency government bonds. The fund's largest currency exposure going into 2019 remained to the US dollar, which totalled 69%. In local currencies, the fund's largest allocations were to the Brazilian real, Indian rupee, Russian ruble, Indonesian rupiah, Malaysian ringgit, and Turkish lira.

In our overall approach, we continue to believe that flexibility remains key for successfully investing in emerging market bonds, with the freedom to hold those bonds and currencies that offer the best relative value and avoid countries or industries where the outlook is unfavourable.

Claudia Calich

Fund manager

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

The following chart and tables show the performance for two of the fund's share classes – Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

We show performance for these two share classes because:

- The performance of the Sterling Class 'A' (Accumulation) share is what most individuals investing directly with M&G have received. It has the highest ongoing charge of all the sterling share classes. Performance is shown after deduction of this charge. All UK investors in the fund therefore received this performance or better.
- The performance of the Sterling Class 'I' (Accumulation) share is the most appropriate to compare with the average performance of the fund's comparative sector. It is the share class used by the Investment Association in the calculation of the comparative sector's average performance. This share class is available for direct investment with M&G subject to minimum investment criteria, or via third parties who may charge additional fees. The performance shown takes the deduction of the ongoing charge for this share class into account but it does not take account of charges applied by any other party through which you may have invested.

The fund is available for investment in different share classes, each with varying levels of charges and minimum investments; please refer to the Prospectus for M&G Investment Funds (3), which is available free of charge either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Fund level performance

Fund net asset value

Fund net asset value (NAV)	484,220	1,183,643	523,208

Performance since launch

To give an indication of how the fund has performed since launch, the chart below shows total return of Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

The fund's Sterling Class 'I' (Accumulation) shares were launched on 19 April 2012. Performance data shown prior to this date is that of the fund's Sterling Class 'A' (Accumulation) shares.

Financial highlights

Fund performance

To give an indication of the performance of the fund, the following table shows the compound rate of return, over the period to 7 December 2018 for non-sterling share classes and 2 January 2019 for sterling share classes. Calculated on a price to price basis with income reinvested

- [k] 15 October 1999, the end of the initial offer period of the predecessor unit trust.

Operating charges and portfolio transaction costs

We explain below the payments made to meet the ongoing costs of investing and managing the fund, comprising operating charges and portfolio transaction costs.

Operating charges

Operating charges include payments made to M&G and to providers independent of M&G:

- Investment management: Charge paid to M&G for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid to M&G for administration services in addition to investment management – any surplus from this charge will be retained by M&G.
- Share class hedging: Charge paid to M&G for currency hedging services to minimise exchange rate risk for the share class.
- Oversight and other independent services: Charges paid to providers independent of M&G for services which include depositary, custody and audit.
- Ongoing charges from underlying funds: Ongoing charges on holdings in underlying funds that are not rebated.

The operating charges paid by each share class of the fund are shown in the following performance tables. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of share classes may differ, and therefore the operating charges may differ.

Operating charges are the same as the ongoing charges shown in the Key Investor Information Document, other than where an estimate has been used for the ongoing charge because a material change has made the operating charges unreliable as an estimate of future charges.

For this fund there is no difference between operating charges and ongoing charges figures, unless disclosed under the specific share class performance table.

Financial highlights

Fund performance

Operating charges and portfolio transaction costs

Portfolio transaction costs

Portfolio transaction costs are incurred by funds when buying and selling investments. These costs vary depending on the types of investment, their market capitalisation, country of exchange and method of execution. They are made up of direct and indirect portfolio transaction costs:

- Direct portfolio transaction costs: Broker execution commission
- Indirect portfolio transaction costs: 'Dealing spread' the difference between the buying and selling prices of the fund's investments; some types of investment, such as fixed interest securities, have no direct transaction costs and only the dealing spread is paid.

Investments are bought or sold by a fund when changes are made to the investment portfolio and in response to net flows of money into or out of the fund from investors buying and selling shares in the fund.

To protect existing investors, portfolio transaction costs incurred as a result of investors buying and selling shares in the fund are recovered from those investors through a 'dilution adjustment' to the price they pay or receive. The table below shows direct portfolio transaction costs paid by the fund before and after that part of the dilution adjustment relating to direct portfolio transaction costs. To give an indication of the indirect portfolio dealing costs the table also shows the average portfolio dealing spread.

Further information on this process is in the Prospectus, which is available free of charge on request either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Portfolio transaction costs						
Six	months to 31.12.18	Year to 30.06.18	Year to 30.06.17	Average [a]

as at Indirect portfolio transaction costs	31.12.18	30.06.18 %	30.06.17 %	Average [a] %		
Average portfolio dealing spread	0.80	0.80	0.65	0.75		

- [a] Average of first three columns.
- [b] As a percentage of average net asset value.
- [c] In respect of direct portfolio transaction costs. Please see the section above this table for an explanation of dilution adjustments.

Specific share class performance

The following tables show the performance of each share class. All 'Performance and charges' percentages represent an annual rate except for the 'Return after operating charges' which is calculated as a percentage of the opening net asset value per share (NAV). 'Dilution adjustments' are only in respect of direct portfolio transaction costs.

The non-sterling share classes were merged into the M&G (Lux) Global High Yield Bond Fund on 7 December 2018. The distribution yields for the current year non-sterling share classes were calculated at the merger date.

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for distribution to Income shares, the annual management charge, administration charge and share class hedging charge are offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Marginal tax relief has not been taken into account in respect of expenses offset against capital.

M&G Emerging Markets Bond Fund Financial statements and notes

Authorised Corporate Director's Report

Investment objective

The fund aims to provide income and capital growth.

Investment policy

At least 70% of the fund is invested in investment grade corporate bonds denominated in any European currency. The fund may also invest in high yield corporate bonds, government and public securities denominated in any European currency. The fund's exposure to bonds, government and other public securities may be gained through the use of derivatives. Derivatives may also be used for efficient portfolio management. The fund may also invest in collective investment schemes, other transferable securities, cash, near cash, other money market instruments, warrants and other derivative instruments which may be denominated in any major global currency. More than 70% of the Fund will be in euro or hedged back to euro.

Investment approach

The fund manager believes that bond returns are driven by a combination of macroeconomic, asset, sector, geography and stock-level factors. A dynamic investment approach is followed, allowing the fund manager to change the blend of duration and credit exposure based on the outlook. A high level of diversification, across individual issuers, sectors and geographies is an essential part of the investment process.

Risk profile

A minimum of 70% of the fund is invested in investment grade corporate bonds denominated in any European currency. It is primarily subject to the price volatility of the European bond market as well as the performance of individual issuers. It is also influenced by developments in the broader global bond market. In addition, the fund is subject to fluctuations in currency exchange rates.

Up to 30% of the fund may be invested in high yield corporate bonds, government and public securities denominated in any European currency. Some of these securities may be higher risk assets that could potentially experience a degree of illiquidity in times of market distress.

The fund's exposure to debt securities may be gained through the use of derivatives. In association with the use of derivatives, including those instruments not traded through an exchange, collateral is deposited, in order to mitigate the risk that a counterparty may default on its obligations or become insolvent.

Portfolio diversification is key in managing liquidity and default risks as well as reducing market risk. The fund's risks are measured and managed as an integral part of the investment process.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the
 past and is based on historical data so may not be a reliable indicator of the future
 risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Investment review

As at 2 January 2019, for the six months ended 31 December 2018

Performance against objective

Between 2 July 2018 (the start of the review period) and 2 January 2019, the M&G European Corporate Bond Fund delivered a positive total return (the combination of income and growth of capital) in its sterling share classes*.

On 9 November 2018, the fund's non-sterling share classes merged into the M&G (Lux) Euro Corporate Bond Fund, a Luxembourg-authorised SICAV which launched on that date. The M&G European Corporate Bond Fund's euro and Swiss franc shares had broadly flat returns between 1 July 2018 and 9 November 2018, while its US dollar share classes generated positive returns.

The M&G European Corporate Bond Fund invests mainly in high-quality corporate bonds denominated in any European currency, with the aim of providing income and capital growth.

Bonds are loans that are extended by an investor to an issuing entity – such as a company or government – in exchange for regular interest payments. The initial amount borrowed by the entity is usually repaid at the end of the loan's life. Bonds issued by companies are referred to as 'corporate bonds', while those issued by governments are called 'government bonds'. Investment grade corporate bonds are debt securities issued by a company with a medium or high credit rating from a recognised credit rating agency. They are considered to be at lower risk of non-repayment than those issued by companies with lower credit ratings (known as high yield bonds). The performance of investment grade corporate bond markets can be influenced by the performance of government bonds.

* For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Fund performance' section of this report.

Authorised Corporate Director's Report

Investment review

Investment performance

Volatility returned to financial markets in 2018, as a result of a range of factors that included higher interest rates and inflation, political uncertainty and global trade tensions.

The US Federal Reserve raised interest rates in September and December, making it a total of nine times US rates have risen since the great financial crisis about a decade ago. In the UK, much uncertainty remained about the eventual terms of the country's Brexit deal with the European Union (EU). This contributed to times of adverse sentiment towards UK bonds. Elsewhere, investors in Europe became concerned towards the end of the period about Italian proposals to increase the country's budget deficit. The plans, which met with opposition from the EU, were drafted after an antiestablishment party gained a strong presence in Italy's new coalition government. Also, the European Central Bank ended its monthly bond buying programme at the end of the year.

Meanwhile, sentiment towards corporate bonds – and international stockmarkets – became increasingly affected by concerns of a trade war developing between the US and China. In addition, during the latter months of the year, global economic growth forecasts began to moderate, which contributed to some weaker confidence in the outlook for corporate bonds and emerging markets.

These more challenging conditions led to losses across many parts of the bond market over the six-month period. Sterling and euro-denominated investment grade corporate bonds generally suffered more than US dollar-denominated corporate bonds, while high yield corporate bonds declined more notably.

The fund's performance was driven by its sizeable exposure to investment grade corporate bonds. However, the fund's relative lack of sensitivity to changes in interest rates (known as 'duration') constrained performance.

Investment activities

One of the key drivers of a bond fund's performance is the ability to adjust the portfolio's sensitivity to changes in interest rates, known as 'duration' and measured in years. Being shorter duration means that a fund is relatively less sensitive to changes in interest rates than longer-duration funds. During the course of the reporting period, we slightly adjusted the fund's duration, while keeping it short overall. We moved it between around 0.8 and 0.5 years short of a comparable index, ending the reporting period at around 0.5 years short.

We continue to like financials and retained a significant exposure to this sector throughout the review period. We bought selected short-dated bank bonds from lower down the capital structure – which we believe provide a good trade-off in terms of the potential risk and reward offered – from names that we like, including Spain's Santander.

We remain cautious about prospects for the UK economy and the impact of Brexit uncertainty and did not add substantively to our UK holdings over the period.

We added some French government bonds in August, as we partially de-risked the portfolio. We will look for opportunities to add some credit risk back as markets stabilise.

Outlook

In our view, global economic growth is likely to hold up in 2019, at least at a sufficient pace to be supportive of corporate bond markets. Monetary policy works with a lag. We can see this in the labour market, where wages were high in 2007-2008 off the back of a strong global economy in 2005-2006. There are clear signs that the US labour market is now overheating, which will drive pay higher.

Recent European data have been disappointing, although economic growth is still expected at 1.6% this year and 1.5% in 2020 (down from 1.9% in 2018). A lower oil price should benefit eurozone consumers. However, European politics remain challenging, despite Italy's populist government heading off its latest challenge in December by agreeing to drop its deficit target. After a difficult year for European corporate bond markets, prices look increasingly attractive.

Regardless of how these situations develop, what we do as fund managers does not change. We look at where we are in the interest rate cycle and the economic cycle, and we look at where we can find the most attractive opportunities for the fund from different sectors and individual issuers at any given stage.

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

The following chart and tables show the performance for two of the fund's share classes – Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

We show performance for these two share classes because:

- The performance of the Sterling Class 'A' (Accumulation) share is what most individuals investing directly with M&G have received. It has the highest ongoing charge of all the sterling share classes. Performance is shown after deduction of this charge. All UK investors in the fund therefore received this performance or better.
- The performance of the Sterling Class 'I' (Accumulation) share is the most appropriate to compare with the average performance of the fund's comparative sector. It is the share class used by the Investment Association in the calculation of the comparative sector's average performance. This share class is available for direct investment with M&G subject to minimum investment criteria, or via third parties who may charge additional fees. The performance shown takes the deduction of the ongoing charge for this share class into account but it does not take account of charges applied by any other party through which you may have invested.

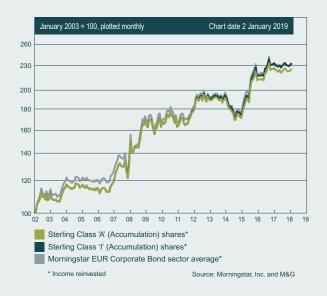

The fund is available for investment in different share classes, each with varying levels of charges and minimum investments; please refer to the Prospectus for M&G Investment Funds (3), which is available free of charge either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Performance since launch

To give an indication of how the fund has performed since launch, the chart below shows total return of Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

The fund's Sterling Class 'I' (Accumulation) shares were launched on 3 August 2012. Performance data shown prior to this date is that of the fund's Sterling Class 'A' (Accumulation) shares.

Financial highlights

Fund performance

To give an indication of the performance of the fund, the following table shows the compound rate of return, over the period to 9 November 2018 for non-sterling share classes and 2 January 2019 for sterling share classes. Calculated on a price to price basis with income reinvested.

Long-term performance by share class				
	Six months 02.07.18 % [a]	Three years 04.01.16 % p.a.	Five years 02.01.14 % p.a.	Since launch % p.a.
Euro [b]

- [b] Price to price with gross income reinvested.
- [c] 13 January 2003, the launch date of the fund.
- [d] Price to price with income reinvested.
- [e] 3 August 2012, the launch date of the share class.
- [f] 23 February 2018, the launch date of the share class. Not annualised.
- [g] 28 September 2012, the launch date of the share class.
- [h] 8 August 2014, the launch date of the share class.

Operating charges and portfolio transaction costs

We explain below the payments made to meet the ongoing costs of investing and managing the fund, comprising operating charges and portfolio transaction costs.

Operating charges

Operating charges include payments made to M&G and to providers independent of M&G:

- Investment management: Charge paid to M&G for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid to M&G for administration services in addition to investment management – any surplus from this charge will be retained by M&G.

- Share class hedging: Charge paid to M&G for currency hedging services to minimise exchange rate risk for the share class.
- Oversight and other independent services: Charges paid to providers independent of M&G for services which include depositary, custody and audit.
- Ongoing charges from underlying funds: Ongoing charges on holdings in underlying funds that are not rebated.

The operating charges paid by each share class of the fund are shown in the following performance tables. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of share classes may differ, and therefore the operating charges may differ.

Operating charges are the same as the ongoing charges shown in the Key Investor Information Document, other than where an estimate has been used for the ongoing charge because a material change has made the operating charges unreliable as an estimate of future charges.

For this fund there is no difference between operating charges and ongoing charges figures, unless disclosed under the specific share class performance table.

Portfolio transaction costs

Portfolio transaction costs are incurred by funds when buying and selling investments. These costs vary depending on the types of investment, their market capitalisation, country of exchange and method of execution. They are made up of direct and indirect portfolio transaction costs:

- Direct portfolio transaction costs: Broker execution commission and taxes.
- Indirect portfolio transaction costs: 'Dealing spread' the
 difference between the buying and selling prices of the fund's
 investments; some types of investment, such as fixed interest
 securities, have no direct transaction costs and only the dealing
 spread is paid.

Investments are bought or sold by a fund when changes are made to the investment portfolio and in response to net flows of money into or out of the fund from investors buying and selling shares in the fund.

To protect existing investors, portfolio transaction costs incurred as a result of investors buying and selling shares in the fund are recovered from those investors through a 'dilution adjustment' to the price they pay or receive. As the fund invests mainly in fixed interest securities, the direct transaction costs paid on other investments are too small to be reflected in the table below. To give an indication of the indirect portfolio dealing costs the table below shows the average portfolio dealing spread.

Further information on this process is in the Prospectus, which is available free of charge on request either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Portfolio transaction costs				
as at Indirect portfolio transaction costs	31.12.18 %	30.06.18 %	30.06.17 %	Average [a] %
Average portfolio dealing spread	0.57	0.45	0.49	0.50

[a] Average of first three columns.

Financial highlights

Specific share class performance

The following tables show the performance of each share class. All 'Performance and charges' percentages represent an annual rate except for the 'Return after operating charges' which is calculated as a percentage of the opening net asset value per share (NAV). 'Dilution adjustments' are only in respect of direct portfolio transaction costs.

The non-sterling share classes were merged into the M&G (Lux) European Corporate Bond Fund on 9 November 2018. The distribution yields for the current year non-sterling share classes were calculated at the merger date.

The share class was launched on 12 July 20)13.

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for distribution to Income shares, the annual management charge, administration charge and share class hedging charge are offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Marginal tax relief has not been taken into account in respect of expenses offset against capital.

Investment objective

The fund aims to provide income and capital growth.

Investment policy

At least 70% of the fund is invested in higher yielding debt instruments denominated in any European currency and will normally be managed to give investors exposure to European currencies. The fund's exposure to higher yielding debt instruments may be gained through the use of derivatives. Derivatives may also be used for efficient portfolio management. The fund may also invest in collective investment schemes, government and public securities and other transferable securities, cash, near cash, other money market instruments, warrants and other derivative instruments which may be denominated in any major global currency. Any non-European currency exposures within the fund may be managed by currency hedges in European currencies. More than 70% of the fund will be in euro or hedged back to euro.

Investment approach

The fund manager concentrates on bottom-up analysis of individual bond issues while remaining aware of macroeconomic developments. Emphasis is placed upon investigating the ability of a company or government to meet its interest payments, especially during unfavourable economic conditions. Credit risk is constantly monitored and typically spread across a variety of countries and industrial sectors.

Risk profile

The fund invests mainly in higher yielding fixed income securities denominated in any European currency. It is primarily subject to the price volatility of the European bond market as well as the performance of individual issuers. It is also influenced by developments in the broader global bond market. In addition, the fund is subject to fluctuations in currency exchange rates.

The fund's focus on higher yielding debt securities implies that it may experience greater volatility than a fund that invests primarily in investment grade debt securities as higher risk assets could potentially experience a degree of illiquidity in times of market distress.

The fund's exposure to debt securities may be gained through the use of derivatives. In association with the use of derivatives, including those instruments not traded through an exchange, collateral is deposited, in order to mitigate the risk that a counterparty may default on its obligations or become insolvent.

Portfolio diversification is key in managing liquidity and default risks as well as reducing market risk. The fund's risks are measured and managed as an integral part of the investment process.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the
 past and is based on historical data so may not be a reliable indicator of the future
 risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Investment review

As at 2 January 2019, for the six months ended 31 December 2018

Performance against objective

Between 2 July 2018 (the start of the review period) and 2 January 2019, the M&G European High Yield Bond Fund delivered a small positive total return (the combination of income and growth of capital) for its sterling class shares. On the other hand, the fund's US dollar and euro class shares delivered a negative return. Please note that the Swiss franc and US dollar Class 'C-H' share classes were closed on 3 August 2018.*

In this reporting period, the fund's performance against its objective of providing income** and capital growth was mixed. Over three and five years the fund has met its objective.

- * For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Fund performance' section of this report.
- ** The fund's distribution and distribution yield are as shown in the 'Specific share class performance' tables in the 'Financial highlights' section of this report.

Investment performance

The six months under review were a challenging period for high yield bond markets. (High yield bonds are loans paying fixed interest issued by companies with a low credit rating. Credit ratings are independent assessments of a borrower's ability to repay loans. Bonds from low-rated companies are considered riskier than those issued by companies with a high credit rating. They therefore pay a higher rate of interest than their higher rated counterparts, to compensate investors for the greater possibility that the issuer might be unable to meet its obligations, or in other words, default.)

After delivering steady returns throughout much of 2016 and 2017, high yield markets faced a more difficult environment in 2018. A variety of factors have weighed on sentiment during the year, including concerns over the negative impact of rising US interest rates, escalating trade war tensions between the US and China, and political turmoil in Europe and several emerging markets.

M&G European High Yield Bond Fund

Authorised Corporate Director's Report

Investment review

Investment performance (continued)

US high yield markets have generally proved more resilient than elsewhere, thanks in part to the relative strength of the US economy. While the sharp fall in oil prices since early October weighed on US energy names in the second half of the review period, this was partly offset by continued robust performance in other sectors, such as healthcare and real estate. In contrast, high yield bonds in Europe and emerging markets have endured a more challenging backdrop, with ongoing political uncertainty and slowing economic momentum weighing on returns.

Fund performance over the review period was mixed across the different share classes. While the sterling share classes produced a small positive return, the euro and US dollar share classes posted negative returns. The sterling share classes were ahead of the Morningstar Europe High Yield Bond sector. Please note that the Swiss franc and US dollar Class 'C-H' share classes closed on 3 August 2018.

The fund's defensive sector positioning and modest exposure to the periphery of the eurozone proved helpful overall, although this was partly offset by a bias towards the financial sector, which generally underperformed.

Investment activities

There were no significant changes in fund positioning during the period under review and we maintained our preference for defensive, non-cyclical companies offering resilient cashflows, such as packaging companies and cable businesses. Notable holdings in this space include telecom operators Wind Tre and Unity Media and packaging companies Crown European Holdings and Ardagh Packaging Finance.

While not accounting for a significant part of the European high yield market, we nevertheless maintain minimal exposure to the energy and commodity sectors. Even after the recent sell-off, we think these sectors do not generally provide sufficient compensation for the risks at this stage of the economic cycle.

In regional allocation terms, we maintain a preference for Northern Europe while keeping only a modest exposure to the periphery of the eurozone. We also maintain an allocation of approximately 18% to US high yield, which is around twice that of a comparable index.

Over the six months under review, the overall average credit risk of the fund was broadly unchanged. We maintain a slight preference for more highly rated BB bonds, while also keeping a small exposure to investment grade BBB bonds.

We continue to see attractive opportunities in the primary high yield market and participated in a broad range of new deals over the period, including issues from financial services company Intertrust and construction business James Hardie. In terms of sales, we closed or reduced our positions in several names where we were beginning to see less value relative to fundamentals, such as Balkan telecom provider United Group and debt management firm Garfunkelux.

Fund duration (a measure of a bond fund's sensitivity to movements in interest rates) was slightly reduced over the six months to around 3.5 years as at the end of December compared to 3.7 years at the end of June. With the possibility of a further rise in US interest rates and a pick-up in global inflation, we believe a cautious stance is warranted.

Outlook

In the current environment where interest rates are low and many assets are generating a low prospective return, or yield, we think European high yield bonds currently offer an attractive source of income. Following recent market weakness, we believe these assets now look attractively priced against a backdrop of modest economic expansion and with the expectation that company default rates remain at historically low levels.

However, given where we are in the market cycle, we believe a cautious approach is still warranted and we maintain our preference for defensive businesses offering stable cashflows and healthy balance sheets. With heightened volatility likely to lead to a greater divergence in bond prices, we believe that careful individual bond selection and in-depth company analysis will become increasingly important to help identify the most attractive pockets of value.

In our view, high yield investing is as much about avoiding the losers as picking the winners. On this basis, we remain cautiously positioned in the retail sector. We believe the sector is facing long-term structural headwinds as shoppers increasingly move towards online spending and away from traditional bricks-and-mortar stores. While some of these businesses will be able to adapt, we continue to be very selective in this space.

James Tomlins

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

The following charts and tables show the performance for two of the fund's share classes – Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

We show performance for these two share classes because:

- The performance of the Sterling Class 'A' (Accumulation) share is what most individuals investing directly with M&G have received. It has the highest ongoing charge of all the sterling share classes. Performance is shown after deduction of this charge. All UK investors in the fund therefore received this performance or better.
- The performance of the Sterling Class 'I' (Accumulation) share is the most appropriate to compare with the average performance of the fund's comparative sector. It is the share class used by the Investment Association in the calculation of the comparative sector's average performance. This share class is available for direct investment with M&G subject to minimum investment criteria, or via third parties who may charge additional fees. The performance shown takes the deduction of the ongoing charge for this share class into account but it does not take account of charges applied by any other party through which you may have invested.

The fund is available for investment in different share classes, each with varying levels of charges and minimum investments; please refer to the Prospectus for M&G Investment Funds (3), which is available free of charge either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Fund level performance

Fund net asset value

Fund performance

Operating charges and portfolio transaction costs

We explain below the payments made to meet the ongoing costs of investing and managing the fund, comprising operating charges and portfolio transaction costs.

Operating charges

Operating charges include payments made to M&G and to providers independent of M&G:

- Investment management: Charge paid to M&G for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid to M&G for administration services in addition to investment management – any surplus from this charge will be retained by M&G.
- Share class hedging: Charge paid to M&G for currency hedging services to minimise exchange rate risk for the share class.
- Oversight and other independent services: Charges paid to providers independent of M&G for services which include depositary, custody and audit.

The operating charges paid by each share class of the fund are shown in the following performance tables. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of share classes may differ, and therefore the operating charges may differ.

Operating charges are the same as the ongoing charges shown in the Key Investor Information Document, other than where an estimate has been used for the ongoing charge because a material change has made the operating charges unreliable as an estimate of future charges.

For this fund there is no difference between operating charges and ongoing charges figures, unless disclosed under the specific share class performance table.

Portfolio transaction costs

Portfolio transaction costs are incurred by funds when buying and selling investments. These costs vary depending on the types of investment, their market capitalisation, country of exchange and method of execution. They are made up of direct and indirect portfolio transaction costs:

- Direct portfolio transaction costs: Broker execution commission and taxes.
- Indirect portfolio transaction costs: 'Dealing spread' the
 difference between the buying and selling prices of the fund's
 investments; some types of investment, such as fixed interest
 securities, have no direct transaction costs and only the dealing
 spread is paid.

Investments are bought or sold by a fund when changes are made to the investment portfolio and in response to net flows of money into or out of the fund from investors buying and selling shares in the fund.

To protect existing investors, portfolio transaction costs incurred as a result of investors buying and selling shares in the fund are recovered from those investors through a 'dilution adjustment' to the price they pay or receive. As the fund invests mainly in fixed interest securities, the direct transaction costs paid on other investments are too small to be reflected in the table below. To give an indication of the indirect portfolio dealing costs the table below shows the average portfolio dealing spread.

Further information on this process is in the Prospectus, which is available free of charge on request either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Portfolio transaction costs				
as at Indirect portfolio transaction costs	31.12.18 %	30.06.18 %	30.06.17 %	Average [a] %
Average portfolio dealing spread	0.98	0.79	0.68	0.82

[a] Average of first three columns.

Specific share class performance

The following tables show the performance of each share class. All 'Performance and charges' percentages represent an annual rate except for the 'Return after operating charges' which is calculated as a percentage of the opening net asset value per share (NAV). 'Dilution adjustments' are only in respect of direct portfolio transaction costs.

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for distribution to Income shares, the annual management charge, administration charge and share class hedging charge are offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Marginal tax relief has not been taken into account in respect of expenses offset against capital.

M&G European High Yield Bond Fund Financial statements and notes

Authorised Corporate Director's Report

Investment objective

The fund aims to provide a higher total return (the combination of capital growth and income), net of the ongoing charges figure, than that of the FTSE All Share Equity Investment Instruments Index over any five year period.

Investment policy

At least 80% of the fund is invested in the shares of investment trust companies. While these stocks are listed in the UK, such assets will be used to give exposure to a wide range of international markets. These investment trust companies may also hold a broad range of investment asset classes including equities, real estate and debt.

The fund may also invest in other transferable securities directly or via collective investment schemes, and may hold cash for liquidity purposes. Collective investment schemes may include funds managed by M&G. Derivatives may be used for efficient portfolio management and hedging purposes.

Investment approach

The fund manager selects investment vehicles from which long-term growth (over five years or more) can be obtained by assessing their investment philosophy, style, objective and the ability of each manager to deliver on them; and the discount at which its shares are trading.

Risk profile

The fund invests in the shares of investment trust companies and is exposed to a wide spread of investments in the UK and overseas stockmarkets. The fund is, therefore, subject to the price volatility of the global stockmarkets and the performance of individual investment trust companies. The fund is also subject to fluctuations in currency exchange rates. Diversification across markets, industries and asset classes is therefore key in managing liquidity risk and reducing market risk. The fund's risks are measured and managed as an integral part of the investment process.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the
 past and is based on historical data so may not be a reliable indicator of the future
 risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Investment review

As at 2 January 2019, for the six months ended 31 December 2018

Performance against objective

Between 2 July 2018 (the start of the review period) and 2 January 2019, the fund's Sterling Class 'A' and 'X' shares each produced a total return (the combination of income and growth of capital) of -10.7%. Meanwhile, the FTSE All-Share Equity Investment Instruments Index, which is an index of comparable investment trusts, returned -4.9%.

A proportion of the fund's underperformance was due to technical factors, for example, the effect of swing pricing. This method uses a dilution adjustment within the share price, which is aimed at protecting existing shareholders from a dilution in the fund price which can occur when large deals are placed to buy or sell shares. The method has the effect of moving the single price up or down from the mid-price – known as 'swinging'. Over the review period, the price 'swung' lower, thus affecting the fund's performance.

Over five years, the fund has not met its objective, which is to outperform, net of the ongoing charges figure, the FTSE All-Share Equity Investment Instruments Index.*

* For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Fund performance' section of this report.

Investment performance

The six months under review was a volatile period for most major stockmarkets, due to concerns about rising US interest rates and expectations of further moves towards the normalisation of monetary policy. Persistent unease about international trade wars and the looming Brexit deadline in March 2019 also dampened investor sentiment.

Global stockmarkets saw significant volatility during October 2018 due to a sharper-than-expected increase in borrowing costs driven by the US bond market. Emerging markets, Asia and Japan were particularly weak at this time. Investors worried that the US may raise interest rates more quickly in 2019 in response to inflationary pressures resulting from a strong US economy. At the same time, some disappointing earnings guidance and concerns that tightening by the US Federal Reserve (Fed) may dampen the US economy weighed further on investors' mood. Despite a modest rebound for most stockmarkets in November, December saw further volatility as global political and economic uncertainty again troubled investors. In this environment, all major markets saw marked declines over the six months.

Smaller companies, which are generally perceived as higher risk, were largely out of favour with investors over the period under review. This was particularly the case in the challenging final months of the year, when investors struggled to find 'safe havens'. The fund has meaningful exposure to smaller companies, and a number of investment trusts invested in smaller companies featured prominently among detractors. Specific examples included JPMorgan European Smaller Companies Investment Trust, River and Mercantile UK Micro Cap Investment and Baillie Gifford Shin Nippon, which is invested in smaller Japanese firms. Despite recent weakness, smaller companies can perform well during periods of greater optimism and we believe they play a useful role in a diversified portfolio.

Investment review

Investment performance (continued)

The fund's performance was also hurt by a position in CATCo Reinsurance Opportunities Fund, which is one of the fund's 'specialist' holdings. Meanwhile, global infrastructure firm BBGI, also in the 'specialist' portion of the fund, performed well. So did Syncona (formerly BACIT Investment Trust), which is focused on life science investments and is situated in the fund's 'flexible investment' section.

Turning to geographic markets, the issue of Brexit has weighed on sentiment towards UK company shares. Initial progress in the Brexit talks in late 2017 was followed by months of disagreement and stalemate, both within the government and between the UK and the EU negotiators. A vote on a draft Brexit agreement by Parliament was defeated and the next step forward is not yet clear. Notwithstanding considerable Brexit-related uncertainty, the domestic economy has been holding up relatively well. Unemployment is at record lows, wage growth is improving and inflation remains contained for now. Woodford Patient Capital Trust was neutral in a challenging market, while Artemis Alpha Trust and Aberforth Split Level Income Trust held back returns.

In contrast, the US was one of the best-performing markets over the six-month period. Against a backdrop of solid economic growth, falling unemployment and higher inflation, the Fed raised interest rates twice during the period under review and a total of four times during 2018. However, future increases are likely to come at a slower pace. While the US economy remains healthy, forecasts for economic growth in 2019 have been revised down slightly. In this environment, Baillie Gifford US Growth Trust was neutral over the six months, while North Atlantic Smaller Companies Investment Trust came under pressure.

Meanwhile, the eurozone economy is expanding – although growth has been softer of late – while unemployment levels continue to improve and businesses are supported by low interest rates. The European Central Bank (ECB) announced in the summer that it would halve its bond purchases in September and halt them altogether in December. Meanwhile, a row over Italy's controversial budget for 2019 weighed on investor sentiment before a revised version was finally approved by the European Commission, the European Union's (EU) executive arm. Apart from our holding in the JPMorgan European Smaller Companies Investment Trust, mentioned above, the fund's exposure to European assets detracted only modestly against a challenging backdrop.

Elsewhere, the Japanese economy was hurt by a spate of natural disasters over the summer. Rising trade tension between the US and China has also been a prominent theme and trade-related uncertainty weighed on investor sentiment over the six months. A holding in Baillie Gifford Japan Trust cost some performance.

In other areas, emerging and Asian markets came under pressure due to concerns of a potential trade war as a result of international trade tensions and subsequent measures by the US and China. The prospect of higher interest rates in the US also caused unease as investors worried that the US would be seen as a more attractive place to invest capital. Furthermore, the stronger US dollar put pressure on

those economies relying on overseas borrowing. In this environment, the fund's holdings in these markets generally performed well, with Utilico Emerging Markets and Edinburgh Dragon Trust adding value, although Weiss Korea Opportunity Fund held back returns.

Meanwhile, in the fund's private equity assets section, Pantheon International added modest value. Elsewhere, Ediston Property investment Company REIT was also beneficial for returns.

Investment activities

We sold a position in Personal Assets Trust, the only complete sale over the six months. This move was part of a consolidation process of similar holdings with 'defensive' characteristics. Such positions tend to hold up relatively well regardless of economic cycles, compared to their more growth-oriented counterparts.

In other sales, we reduced a number of holdings following a period of strong performance. For example, we scaled back the position in Monks Investment Trust and Syncona, although we still have meaningful allocations to the holdings. We also took advantage of solid recent performance to take some profits on Polar Capital Technology, JPMorgan American Investment Trust, Miton Global Opportunities and TR Property Investment Trust.

In other transactions, the only significant purchase involved topping up the position in PRS REIT. PRS is building a portfolio of newly constructed, professionally managed housing in locations outside London. In our opinion, PRS is likely to perform differently from geographic stockmarkets in different market conditions and represents useful diversification in the portfolio.

There were no new entrants to the portfolio over the period.

Outlook

The global economy continues to expand but the pace of growth appears to be easing. The US economy is still healthy, although growth in corporate profits is likely to slow going forward.

The threat of a trade war, primarily between the US and China, remains real, as talks between the two sides have so far failed to result in meaningful progress. Worries about the subsequent impact on the US, Chinese and global economies will continue to trouble investors. Market observers will also be keeping a close eye on prospects for further interest rate rises in the US and any potential dampening effect on the domestic economy. Meanwhile, the looming March 2019 deadline for the UK to leave the EU and the lack of clarity about the next steps are unlikely to be far from investors' minds. Nevertheless, after the recent weakness in global stockmarkets, valuations have become more attractive.

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

The following charts and tables reflect the key financial information of a representative share class, Sterling Class 'A' (Accumulation) shares. As different share classes have different attributes, for example charging structures and minimum investments, please be aware that their performance may be different. Please refer to the Prospectus for M&G Investment Funds (3), which is available free of charge either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Fund performance

Operating charges and portfolio transaction costs

We explain below the payments made to meet the ongoing costs of investing and managing the fund, comprising operating charges and portfolio transaction costs.

Operating charges

Operating charges include payments made to M&G and to providers independent of M&G:

- Investment management: Charge paid to M&G for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid to M&G for administration services in addition to investment management – any surplus from this charge will be retained by M&G.
- Oversight and other independent services: Charges paid to providers independent of M&G for services which include depositary, custody and audit.
- Ongoing charges from underlying funds: Ongoing charges on holdings in underlying funds that are not rebated.

The operating charges paid by each share class of the fund are shown in the following performance tables. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of share classes may differ, and therefore the operating charges may differ.

Operating charges are the same as the ongoing charges shown in the Key Investor Information Document, other than where an estimate has been used for the ongoing charge because a material change has made the operating charges unreliable as an estimate of future charges.

For this fund there is no difference between operating charges and ongoing charges figures, unless disclosed under the specific share class performance table.

Portfolio transaction costs

Portfolio transaction costs are incurred by funds when buying and selling investments. These costs vary depending on the types of investment, their market capitalisation, country of exchange and method of execution. They are made up of direct and indirect portfolio transaction costs:

- Direct portfolio transaction costs: Broker execution commission and taxes.
- Indirect portfolio transaction costs: 'Dealing spread' the
 difference between the buying and selling prices of the fund's
 investments; some types of investment, such as fixed interest
 securities, have no direct transaction costs and only the dealing
 spread is paid.

Investments are bought or sold by a fund when changes are made to the investment portfolio and in response to net flows of money into or out of the fund from investors buying and selling shares in the fund.

To protect existing investors, portfolio transaction costs incurred as a result of investors buying and selling shares in the fund are recovered from those investors through a 'dilution adjustment' to the price they pay or receive. The table below shows direct portfolio transaction costs paid by the fund before and after that part of the dilution adjustment relating to direct portfolio transaction costs. To give an indication of the indirect portfolio dealing costs the table also shows the average portfolio dealing spread.

Further information on this process is in the Prospectus, which is available free of charge on request either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for distribution to Income shares, the annual management charge and administration charge are offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

In determining the amount available for distribution, ordinary stock dividends have been transferred to capital, reducing the amount available.

Marginal tax relief has not been taken into account in respect of expenses offset against capital.

Financial statements and notes

Authorised Corporate Director's Report

Investment objective

The fund aims to maximise total return (the combination of income and growth of capital).

Investment policy

The portfolio will mainly consist of investment grade government debt securities, including government guaranteed debt securities, and will be invested on a global basis. The fund's exposure to investment grade government debt may be gained through the use of derivatives. The fund may also invest in other government and public securities, collective investment schemes, other transferable securities, other debt instruments, cash and near cash, deposits, warrants, money market instruments and other derivative instruments. The fund may use derivatives for Efficient Portfolio Management purposes.

Investment approach

The M&G Global Government Bond Fund invests mainly in investment grade government bonds on a global basis. Its investment approach is driven primarily by the fund manager's views on macroeconomic factors such as economic growth, interest rates and inflation. This assessment determines the individual government bonds from different countries in which the manager believes the fund should invest in order to achieve its objective. It also influences the portfolio's mix of interest rate risk and currency exposure. These factors, along with the manager's selection of government bond holdings, drive the fund's long-term performance. With the active management of the fund's currency exposures being one of these drivers, its returns will include a higher degree of currency risk than domestic fixed income funds

Risk profile

The fund invests mainly in investment grade government bonds, including government-guaranteed debt securities, on a global basis. It is, therefore, subject to the price volatility of the global bond market and the performance of individual issuers. It is also subject to fluctuations in currency exchange rates.

The fund's exposure to investment grade government debt may be gained through the use of derivatives. In association with the use of derivatives, including those instruments not traded through an exchange, collateral is deposited, in order to mitigate the risk that a counterparty may default on its obligations or become insolvent.

Up to 30% of the fund's assets may be invested in non-investment grade government debt securities, which are higher risk assets that could potentially experience a degree of illiquidity in times of market distress.

Portfolio diversification is key in managing liquidity and default risks as well as reducing market risk. The fund's risks are measured and managed as an integral part of the investment process.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the
 past and is based on historical data so may not be a reliable indicator of the future
 risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Investment review

As at 2 January 2019, for the six months ended 31 December 2018

Performance against objective

Between 2 July 2018 (the start of the review period) and 2 January 2019, the M&G Global Government Bond Fund recorded positive total returns (the combination of income and growth of capital) across its different share classes, with the exception of its Swiss franc share classes. Over the six months, a variety of global investment themes remained in focus in government bond markets, including expected (and confirmed) rises in interest rates. However, most segments of the mainstream government bond markets registered modestly positive returns and emerging market government bonds delivered marginal gains. For the fund's Swiss franc share classes, the decrease in value of the US dollar (a currency in which the fund held a sizeable exposure) against the Swiss franc was a main factor that detracted from returns.

The fund's objective is to maximise total returns, and while it had mixed results due to the Swiss franc share class during the period under review, it met its objective over three and five years and since launch.*

* For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Fund performance' section of this report.

Investment performance

A number of key themes continued to influence sentiment in global financial markets during the six months to 31 December 2018. These included actual and anticipated interest rate rises in the important US economy, as well as heightened trade tensions between the US and China. The latter factor became an increasing concern as the period progressed, and began to contribute to some lower forecasts of global economic growth.

Despite this backdrop, the US economy continued to perform well in many key areas, including a robust labour market. As widely expected among investors, the Federal Reserve confirmed two further interest rate increases of 0.25 percentage points each. The moves added to the gradual steps taken by the US central bank in recent years to raise rates amid a strengthening economy with firmer inflation.

Authorised Corporate Director's Report

Investment review

Investment performance (continued)

Elsewhere, attention focused on the prospect that the European Central Bank (ECB) would soon scale back its significant economic stimulus policies, which were in operation during recent years. Known as quantitative easing (QE), these policies include the ECB's own purchases of government and corporate bonds in the region, with the main aims of encouraging lending and keeping interest rates low. (Bonds are loans in the form of a security, usually issued by a government – government bonds – or company – corporate bonds – which normally pay a fixed rate of interest over a given time period, at the end of which the initial amount borrowed is repaid.) In December, the ECB confirmed that it would be ceasing its QE programme, although the central bank did not change interest rates during the review period.

In the UK, the annual inflation rate, as measured by the Consumer Prices Index (CPI), stayed above the 2% target set by the Bank of England (BoE). To counter rising consumer prices, central banks often raise interest rates. However, the BoE's Monetary Policy Committee also had to continue assessing Brexit-related uncertainty in the UK outlook. Amid this environment, the central bank left interest rates unchanged, a stance that also seemed driven by signs of weaker economic growth data in the UK as 2018 drew to a close.

Actual or potential rises in interest rates typically dampen economic growth expectations – as well as the performance of bond markets. Given the size and relevance of the US market in a global context, the effects of US interest rate moves can be felt internationally. In addition, the theme of trade protectionism remained a focal point as President Trump's administration imposed new tariffs on an expanded range of imported goods from China. This prompted retaliatory moves by the government in Beijing. Such anti-free trade measures are generally viewed as harmful for the export revenues of governments and corporations. Later in the review period, these factors contributed to reduced forecasts for global economic growth by financial institutions such as the International Monetary Fund.

Against this backdrop, mainstream government bond markets, which are generally perceived as being lower risk assets in times of economic uncertainty, found support from investors towards the end of the period. This helped most segments of government bond markets in countries such as the US, Germany and the UK to deliver small positive returns. In emerging markets, government bonds also registered slightly positive returns. This outcome was recorded despite emerging market bonds experiencing some notable declines in the opening months of the period amid rising US interest rates and the US – China trade dispute.

The fund remained globally diversified in government bonds across developing and emerging markets. Through this positioning, the fund generated modestly positive returns, with the exception of its Swiss franc share classes. For the fund's sterling and euro share classes, some further upside to performance was provided by factors such as the US dollar's increase in value versus sterling and the euro, respectively. This stemmed from the fund's exposure to the US dollar, which was maintained at much higher levels than its allocations to sterling and the euro. For the fund's Swiss franc share class, however, the US dollar's decline in value against the Swiss currency was the main factor that detracted from returns.

Investment activities

The key drivers of the fund's long-term returns continue to include the active management of its allocations to individual countries, as well as its currency positioning. Our largest country position remained the US and we took steps to increase this exposure. In our view, the backdrop of rising interest rates by the Fed, which caused some marked price declines among US government bonds earlier in 2018, left the valuations of these assets looking more attractive.

We also maintained allocations to a number of other industrialised nations. These included Japan, where the fund's position remained broadly stable, as well as the German government bond market. In the latter, while we had reduced the fund's allocation prior to the review period, we added back exposure towards the end of 2018. At the end of the period, Japan and Germany ranked as the fund's second and third largest country exposures, respectively.

In addition to the fund's holdings in major industrialised nations, we continued to favour exposures to government bonds in emerging markets on a selective basis. In our view, appealing long-term value could still be found in this area of the market, despite concerns about higher US interest rates, international trade tensions, and the prospect of slower global economic growth.

In this environment, our preference was to reduce positions in emerging markets earlier in the review period, although we subsequently reinvested money into these assets. Our transactions included selling South African government bonds as we believed the country faced weaker economic prospects. Elsewhere, our investment assessment improved towards government bonds in Turkey, given factors such as the significant decline of the Turkish market amid renewed economic challenges in the country. We added US-dollar denominated government bonds in Turkey, which were later switched into euro-denominated government securities that we felt were attractively priced. In the final month of the period, we added to the fund's emerging markets exposure via purchases that included government bonds in the smaller markets of Israel, Senegal and Albania.

Authorised Corporate Director's Report

Investment review

Outlook

In addition to our chosen country allocations, the fund's flexible investment approach allows us to position the portfolio so that its performance should be less sensitive to the prospect of rising interest rates – a strategy known as holding short duration. Duration measures the sensitivity of a bond's price to a change in interest rates; it is an estimate of the number of years it takes an investor to recover the price of a bond if interest rates change. Generally, the longer the duration, the more sensitive the bond's price is to changes in interest rates. During the review period, we kept a short duration positioning in the fund against the backdrop of actual, or expected, increases in interest rates. However, we adjusted this stance towards the end of the period to be less pronounced, given factors such as the slower economic growth outlook. In our opinion, this prospect should lead to more moderate expectations regarding the extent of upward moves in interest rates.

Among other investment themes, we maintained a globally diversified portfolio of government bonds, not only from large developed nations such as the US, Japan, and the UK, but also from select emerging economies. Despite some recent periods of marked underperformance from emerging market bonds, we believe long-term value can still be found in this area when comparing their valuations to government bonds in developed countries. Relevantly, emerging market bonds offer higher yields relative to developed markets for taking on a higher degree of risk. (Bond yields refer to the interest received from a fixed interest security, which is usually expressed annually as a percentage based on the investment's cost, its current market value or its face value.) We also believe that sentiment towards emerging market bonds should be supported by improvements made to their creditworthiness – a measure of a borrower's ability and willingness to repay its debt.

At the same time, the relevant risks need to be monitored closely, including the increase in anti-free trade policies, as well as signals that China's economy was decelerating at the start of 2019.

Overall, we continue to determine the fund's investment strategy by seeking the most attractive value in the global government bond markets amid the prevailing economic conditions, while avoiding those countries where we believe the outlook is less favourable.

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

The following chart and tables show the performance for two of the fund's share classes – Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

We show performance for these two share classes because:

- The performance of the Sterling Class 'A' (Accumulation) share is what most individuals investing directly with M&G have received. It has the highest ongoing charge of all the sterling share classes. Performance is shown after deduction of this charge. All UK investors in the fund therefore received this performance or better.
- The performance of the Sterling Class 'I' (Accumulation) share is the most appropriate to compare with the average performance of the fund's comparative sector. It is the share class used by the Investment Association in the calculation of the comparative sector's average performance. This share class is available for direct investment with M&G subject to minimum investment criteria, or via third parties who may charge additional fees. The performance shown takes the deduction of the ongoing charge for this share class into account but it does not take account of charges applied by any other party through which you may have invested.

The fund is available for investment in different share classes, each with varying levels of charges and minimum investments; please refer to the Prospectus for M&G Investment Funds (3), which is available free of charge either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Performance since launch

To give an indication of how the fund has performed since launch, the chart below shows total return of Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

The fund's Sterling Class 'I' (Accumulation) shares were launched on 3 August 2012. Performance data shown prior to this date is that of the fund's Sterling Class 'A' (Accumulation) shares.

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period. Calculated on a price to price basis with income reinvested.

Long-term performance by share class					
	Six months 02.07.18 % [a]	Three years 04.01.16 % p.a.	Five years 02.01.14 % p.a.	Since launch % p.a.	
Euro [b]

- [c] 22 August 2014, the launch date of the share class.
- [d] Price to price with income reinvested.
- [e] 4 October 1999, the end of the initial offer period of the predecessor unit trust.
- [f] 3 August 2012, the launch date of the share class.

Financial highlights

Fund performance

Operating charges and portfolio transaction costs

We explain below the payments made to meet the ongoing costs of investing and managing the fund, comprising operating charges and portfolio transaction costs.

Operating charges

Operating charges include payments made to M&G and to providers independent of M&G:

- Investment management: Charge paid to M&G for investment management of the fund (also known as Annual Management Charge).
- Administration: Charge paid to M&G for administration services in addition to investment management - any surplus from this charge will be retained by M&G.
- Oversight and other independent services: Charges paid to providers independent of M&G for services which include depositary, custody and audit.
- Ongoing charges from underlying funds: Ongoing charges on holdings in underlying funds that are not rebated.

The operating charges paid by each share class of the fund are shown in the following performance tables. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of share classes may differ, and therefore the operating charges may differ.

Operating charges are the same as the ongoing charges shown in the Key Investor Information Document, other than where an estimate has been used for the ongoing charge because a material change has made the operating charges unreliable as an estimate of future charges.

For this fund there is no difference between operating charges and ongoing charges figures, unless disclosed under the specific share class performance table.

Portfolio transaction costs

Portfolio transaction costs are incurred by funds when buying and selling investments. These costs vary depending on the types of investment, their market capitalisation, country of exchange and method of execution. They are made up of direct and indirect portfolio transaction costs:

- Direct portfolio transaction costs: Broker execution commission and taxes.
- Indirect portfolio transaction costs: 'Dealing spread' the difference between the buying and selling prices of the fund's investments; some types of investment, such as fixed interest securities, have no direct transaction costs and only the dealing spread is paid.

Investments are bought or sold by a fund when changes are made to the investment portfolio and in response to net flows of money into or out of the fund from investors buying and selling shares in the fund.

To protect existing investors, portfolio transaction costs incurred as a result of investors buying and selling shares in the fund are recovered from those investors through a 'dilution adjustment' to the price they pay or receive. The table below shows direct portfolio transaction costs paid by the fund before and after that part of the dilution adjustment relating to direct portfolio transaction costs. To give an indication of the indirect portfolio dealing costs the table also shows the average portfolio dealing spread.

Further information on this process is in the Prospectus, which is available free of charge on request either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Financial highlights

Specific share class performance

The following tables show the performance of each share class. All 'Performance and charges' percentages represent an annual rate except for the 'Return after operating charges' which is calculated as a percentage of the opening net asset value per share (NAV). 'Dilution adjustments' are only in respect of direct portfolio transaction costs.

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for distribution to Income shares, the annual management charge and administration charge are offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Marginal tax relief has not been taken into account in respect of expenses offset against capital.

M&G Global Government Bond Fund

Financial statements and notes

Authorised Corporate Director's Report

Investment objective and policy

The fund predominantly invests in a diversified range of securities issued by companies which are out of favour, in difficulty or whose future prospects are not fully recognised by the market. The sole aim of the fund is capital growth. There is no particular income yield target.

Investment approach

The M&G Recovery Fund invests in companies that are out of favour with the stockmarket where a good management team is making concerted efforts to turn the business around. The fund manager takes a long-term view with a typical holding period of five years or more and aims to provide a diversified portfolio of up to 100 stocks. Developing a constructive dialogue with company management is a fundamental part of the investment process and the fund manager will not invest in a company unless he has met the management team first.

Risk profile

The fund invests in the shares of UK-listed companies and is, therefore, subject to the price volatility of the UK stockmarket and the performance of individual companies. The fund's focus is on companies that are out of favour with the market, and these stocks could potentially experience a degree of illiquidity in times of market distress. However, the fund is mainly invested in the shares of large and medium-sized companies, which are normally traded with relative ease. The fund also invests in the shares of smaller and AIM-listed companies, which can be more unpredictable and difficult to buy and sell. Diversification across industries and market capitalisation is therefore key in managing liquidity risk and reducing market risk. The fund's risks are measured and managed as an integral part of the investment process.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- · has not changed during this period.

Investment review

As at 2 January 2019, for the six months ended 31 December 2018

Performance against objective

The M&G Recovery Fund aims to deliver capital growth by investing at least 80% of the portfolio in the shares of UK-listed companies that, at the time of investment, are out of favour with the stockmarket, and where the fund manager believes a good management team is making concerted efforts to turn the business around. The fund missed this objective, as it produced a negative total return (the combination of income and growth of capital) across all share classes between 2 July 2018 (the start of the review period) and 2 January 2019.*

The fund's returns in all share classes were behind that of a comparative index, the FTSE All-Share Index. Over the same period, returns for the index were -9.8% and -11.5% in sterling and euro terms, respectively.

* For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Fund performance' section of this report.

Investment performance

The fund delivered negative returns over the six-month review period and underperformed its comparative index, the FTSE All-Share Index. This was due to the adverse market conditions and the fund's differentiated positioning relative to the market. In addition, the fund's portfolio consists of companies that are mostly on the mend and therefore perceived to be high risk, even if they are very attractively valued. Consequently, the past six months has been disappointing in performance terms for most market participants, but the fund has been particularly vulnerable. Nevertheless, there were some encouraging developments, especially within the fund's holdings in biotechnology companies, even if, ultimately, these were not recognised by the market

The six months under review was a volatile period for UK equities, or company shares, as sentiment was undermined by a toxic combination of central banks raising interest rates, led by the US Federal Reserve, the withdrawal of the stimulus packages that have supported markets over the past decade, the impact of President Trump's trade war on China and concerns about the US economy, just as the effect of the tax boost is beginning to wane. US protectionism also affected the other big exporting economies of Europe, Japan and Asia. Another market driver was a strengthening US dollar, which undermined emerging economies with large dollar debts. In addition, slowing global demand resulted in a sharp fall in the price of raw materials, which left Brent crude at slightly over USD50 per barrel by the year end, a decline of 41% from its USD86 high in early October.

In the UK, Brexit increasingly monopolised the headlines, with the odds shortening on a bad outcome and the possibility of a general election. Although the European Union (EU) approved Theresa May's withdrawal agreement, the prime minister postponed the Common's vote on the deal until mid-January, as it quickly became apparent that she would not secure a majority, despite surviving a leadership challenge. The main sticking point seemed to be the lack of a time limit given to the backstop arrangement if an agreement cannot be reached in time on the Irish border issue. (On January 15, Parliament voted against the deal by a large majority.)

Authorised Corporate Director's Report

Investment review

Investment performance (continued)

Sterling had a choppy ride over the period, after rising above USD1.40 at the start of the year for the first time following its Brexit-related devaluation. Since April, however, the currency has come under pressure due to increasing concerns about Brexit and some weaker economic data in the UK as the consumer and the corporate sector have delayed spending decisions until after March 2019. Sterling weakness also partly reflected a resurgent US dollar. The currency trend helped support the larger, internationally exposed companies in the UK stockmarket as it boosted their overseas earnings when they were translated into sterling. Medium-sized and smaller companies underperformed, as they tend to have more domestic exposure, and investors fretted about the impact of Brexit on the UK economy.

At a sector level, with few places to hide, investors sought out the more defensive areas of the market, such as consumer staples companies, pharmaceutical manufacturers, fixed line telecoms firms and the water utilities. In addition, media companies were supported by bid activity.

Amongst the fund's top contributors to performance over the six-month period were gold miner St Barbara and Ei Group (formerly Enterprise Inns), which benefited from investors' risk aversion, and additionally in the case of the latter, from the announcement that it intended to sell some of its property portfolio. FTSE 100 banking group HSBC Holdings was supported by its overseas focus, while a position in telecoms firm BT Group attracted some bargain hunting after a weak first half to 2018. Elsewhere, shares in MC Mining, which produces high-quality coking and thermal coal, rose strongly after it was granted some mining rights for a South African project after a five-year wait; and holdings in industrial thread manufacturer Coats Group, along with Indian electricity generator OPG Power Ventures, were supported by decent results. In the media sector, the fund's sixth-largest holding, Entertainment One, continued to add value. The company is delivering on growth expectations for its franchises, Peppa Pig and MGC, and is seeing increasing success in its television content division. In addition, sector allocation made a modest contribution, principally through avoiding tobacco stocks in the portfolio, which sold off sharply in 2018.

Conversely, the majority of the underperformance was down to a below-market exposure to larger companies and stock selection. In particular in the latter case, in the biotech sector, GW Pharmaceuticals and Oxford Biomedica experienced profit-taking, while Hutchison China Meditech and Mesoblast were affected by what the market perceived to be disappointing drug trial data, although we felt this was substantially overdone. Nevertheless, it has been encouraging to see the progress these companies have been making in developing their drug pipelines and moving towards commercialisation.

Elsewhere, some of the fund's resource company holdings (First Quantum Minerals, Bacanora Lithium, Tullow Oil and Nostrum Oil & Gas) were affected by weakening demand for raw materials and the fall in the oil price.

Investment activities

During the review period, we established three new positions on the fund: construction firm Kier Group, oil services supplier Petrofac, and corporate broking firm plus wealth manager WH Ireland.

Kier is a smaller company, which undertakes infrastructure projects for the government, NHS and local authorities. Kier came to the portfolio after we underwrote part of a rights issue by the company to earn some extra income for the fund. For the first time in a decade in the UK market, Kier's rights issue failed as the share price collapsed below the rights issue price for technical reasons rather than fundamentals. As the fund was left holding the stock, we decided to increase the position by participating in the placing by other underwriting institutions that did not want to be investors in Kier. This was a good opportunity for the fund to invest in a company with a reinforced balance sheet at an attractive valuation in an area of the market where rivals have struggled to compete.

Petrofac is a medium-sized company specialising in large oil projects, mainly in the Middle East and Asia. It made a strategic error by increasing its downstream production and refining activities, which came under pressure from the falling oil price, leaving the company with excessive levels of debt in a complex business. Petrofac is in the process of withdrawing from these areas and expects this to leave it in a cash-positive position. Another issue for the company is that it has been under investigation by the Serious Fraud Office (SFO), which resulted in the chief executive being arrested in May 2017, causing the shares to fall sharply. Petrofac could afford to pay a fine if it was felt that was appropriate; however, the SFO have produced no evidence of wrong-doing (it is not obliged to), and while the company has cooperated with the investigation, it has struggled to understand what it is meant to have done. Petrofac has a sensible board and a good track record. We have carried out a thorough due-diligence check on the business and have met the chairman (ex finance director of Anglo American) and chief executive, Ayman Asfari, who is also the founder, and agree with the many businesses in the industry that show their confidence in him by continuing to fill the firm's order book.

Listed on the AIM (the Alternative Investment Market), WH Ireland is another company where the shares have been under pressure due to issues with the regulator. We believe that the two parts to WH Ireland's business, corporate broking and wealth management, which has a private client book worth approximately £1 billion and includes eight regional offices in the UK and the Isle of Man, together with a large cash balance for its size, are worth more than its market capitalisation (the number of WH Ireland shares in issue multiplied by the share price).

We also participated in a number of refinancings of existing holdings during the six months, the most significant of which were Mercantile Ports & Logistics, Mothercare and African low-cost carrier fastjet. In the case of the former, the refinancing resulted in the fund establishing a substantial holding in the Indian port developer and operator, which is building a new port in Mumbai where the state-run dockside facilities have become clogged up. We believe the company's valuation is appreciably below its true worth and expect it to ramp-up its freighthandling sales. In a very good sign for the future of the business, a local firm has taken a 22% stake in the company as it also recognises the potential.

We made three complete sales over the period to provide funds for better opportunities. These included two stage 1 (unloved) companies, Dixons Carphone and African Petroleum, which had been long-term holdings, but had not made satisfactory progress with improving their operational performance, leading to a loss of conviction in their investment case. Dixons Carphone was originally acquired as Carphone Warehouse and performed well initially, enabling us to exit most of the position profitably previously; but the share price has been

Authorised Corporate Director's Report

Investment review

Investment activities (continued)

lacklustre recently. The other complete sale was UDG Healthcare, a provider of medical equipment and healthcare services to the pharmaceutical sector. The shares had enjoyed a significant run-up and the company had reached stage 3 (recovering well) of our recovery process.

Elsewhere, we realised some profits in other stage 3 holdings such as biotechnology firm GW Pharmaceuticals, emergency repairs business HomeServe, media group Entertainment One, cruise line operator Carnival and industrial thread manufacturer Coats. The proceeds were recycled into some of our more recently acquired stage 1 holdings, including outsourcer Capita, African gold miner Hummingbird Resources and Micro Focus International. The technology firm was introduced in the first half of 2018 after the share price halved following a profit warning. We also took the opportunity to increase another stage 1 company, BT, which has been held in the portfolio for some time. The telecoms group's shares had fallen 20% over the first six months of 2018 and looked friendless and overly cheap.

Outlook

Although there are signs of caution appearing in the UK stockmarket, reflected in a tapering off in merger and acquisition activity, and there is talk of a fourth-quarter contraction by the economy, as manufacturing surveys have turned downward amidst softening business sentiment, the latest corporate earnings and dividend announcements have been broadly supportive. However, until greater clarity appears over the many possible Brexit outcomes, the domestic market is unlikely to make much progress. There is also the short-term negative impact of a weakening oil price on the energy sector, acting as a headwind for the market. In the medium-to-longer term, though, cheaper fuel costs are akin to a tax cut for manufacturers and consumers. Meanwhile, UK interest rates remain ultra-low and labour market dynamics should provide an important support to consumer confidence, as recent data from the retail, housing and auto sectors have not been encouraging.

The UK is home to some fantastic companies operating within a strong corporate governance and legal framework. We continue to believe in taking a contrarian view on the fund, ignoring the short-term noise and exploiting mispriced risk to invest in some great opportunities.

Tom Dobell

Fund manager

An employee of M&G Limited which is an associate of M&G Securities Limited

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

The following charts and tables show the performance for two of the fund's share classes - Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

We show performance for these two share classes because:

- The performance of the Sterling Class 'A' (Accumulation) share is what most individuals investing directly with M&G have received. It has the highest ongoing charge of all the sterling share classes. Performance is shown after deduction of this charge. All UK investors in the fund therefore received this performance or better.
- The performance of the Sterling Class 'I' (Accumulation) share is the most appropriate to compare with the average performance of the fund's comparative sector. It is the share class used by the Investment Association in the calculation of the comparative sector's average performance. This share class is available for direct investment with M&G subject to minimum investment criteria, or via third parties who may charge additional fees. The performance shown takes the deduction of the ongoing charge for this share class into account but it does not take account of charges applied by any other party through which you may have invested.

The fund is available for investment in different share classes, each with varying levels of charges and minimum investments; please refer to the Prospectus for M&G Investment Funds (3), which is available free of charge either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Fund level performance

Fund net asset value			
as at	31.12.18 £'000	30.06.18 £'000	30.06.17 £'000
Fund net asset value (NAV)	2,160,163	2,809,729	3,085,097

Performance since launch

To give an indication of how the fund has performed since launch, the chart below shows total return of Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

Ten-year performance

Please note that comparative data is not available from fund launch. Therefore a ten-year comparable performance chart is shown below.

The fund's Sterling Class 'I' (Accumulation) shares were launched on 15 January 2010. Performance data shown prior to this date is that of the fund's Sterling Class 'A' (Accumulation) shares.

Financial highlights

Fund performance

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period. Calculated on a price to price basis with income reinvested.

Long-term performance by share class					
	Six months 02.07.18 % [a]	Three years 04.01.16 % p.a.	Five years 02.01.14	Since launch

- [d] Price to price with income reinvested
- [e] 23 May 1969, the end of the initial offer period of the predecessor unit trust.
- [f] 1 July 2004, the launch date of the share class.
- [g] 15 January 2010, the launch date of the share class.
- [h] 3 August 2012, the launch date of the share class.
- [i] 1 October 2002, the launch date of the share class.

Operating charges and portfolio transaction costs

We explain below the payments made to meet the ongoing costs of investing and managing the fund, comprising operating charges and portfolio transaction costs.

Operating charges

Operating charges include payments made to M&G and to providers independent of M&G:

- Investment management: Charge paid to M&G for investment management of the fund (also known as Annual Management
- Administration: Charge paid to M&G for administration services in addition to investment management - any surplus from this charge will be retained by M&G.
- Oversight and other independent services: Charges paid to providers independent of M&G for services which include depositary, custody and audit.
- Ongoing charges from underlying funds: Ongoing charges on holdings in underlying funds that are not rebated.

The operating charges paid by each share class of the fund are shown in the following performance tables. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of share classes may differ, and therefore the operating charges may differ.

Operating charges are the same as the ongoing charges shown in the Key Investor Information Document, other than where an estimate has been used for the ongoing charge because a material change has made the operating charges unreliable as an estimate of future charges.

For this fund there is no difference between operating charges and ongoing charges figures, unless disclosed under the specific share class performance table.

Financial highlights

Fund performance

Operating charges and portfolio transaction costs

Portfolio transaction costs

Portfolio transaction costs are incurred by funds when buying and selling investments. These costs vary depending on the types of investment, their market capitalisation, country of exchange and method of execution. They are made up of direct and indirect portfolio transaction costs:

- Direct portfolio transaction costs: Broker execution commission
- Indirect portfolio transaction costs: 'Dealing spread' the difference between the buying and selling prices of the fund's investments; some types of investment, such as fixed interest securities, have no direct transaction costs and only the dealing spread is paid.

Investments are bought or sold by a fund when changes are made to the investment portfolio and in response to net flows of money into or out of the fund from investors buying and selling shares in the fund.

To protect existing investors, portfolio transaction costs incurred as a result of investors buying and selling shares in the fund are recovered from those investors through a 'dilution adjustment' to the price they pay or receive. The table below shows direct portfolio transaction costs paid by the fund before and after that part of the dilution adjustment relating to direct portfolio transaction costs. To give an indication of the indirect portfolio dealing costs the table also shows the average portfolio dealing spread.

Further information on this process is in the Prospectus, which is available free of charge on request either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Specific share class performance

The following tables show the performance of each share class. All 'Performance and charges' percentages represent an annual rate except for the 'Return after operating charges' which is calculated as a percentage of the opening net asset value per share (NAV). 'Dilution adjustments' are only in respect of direct portfolio transaction costs.

Historic yields for the current period are calculated as at 11 January 2019.

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for distribution to Income shares, the annual management charge and administration charge are offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

In determining the amount available for distribution, ordinary stock dividends have been transferred to capital, reducing the amount available.

Marginal tax relief has not been taken into account in respect of expenses offset against capital.

M&G Recovery Fund Financial statements and notes

Authorised Corporate Director's Report

Investment objective

The fund aims to deliver a higher total return (the combination of capital growth and income) than the Numis Smaller Companies Index (excluding Investment Companies), net of the ongoing charge figure, over any five year period.

Investment policy

At least 80% of the fund is invested in UK smaller companies. These are UK listed companies which, at the initial time of purchase, are:

- in the bottom 10% (by market capitalisation) of the FTSE All-Share index. or
- in the Numis Smaller Companies Index (excluding Investment Companies), or
- listed on the Alternative Investment Market.

The fund may also invest in collective investment schemes and other transferable securities. Cash and near cash may be held for ancillary purposes and derivatives, including warrants, may be used for efficient portfolio management and hedging purposes.

Investment approach

The fund manager takes a bottom-up approach to stockpicking and aims to construct a well-diversified portfolio. A long-term perspective is adopted with particular focus placed on 'growth drivers', competitive advantage, change, quality of management and valuation.

When a company held by the fund grows such that it no longer has the characteristics of a smaller company, the fund manager will reduce the holding in a manner and timescale best suited to meeting the fund's objective.

Risk profile

The fund invests in the shares of smaller UK-listed companies and is, therefore, subject to the price volatility of the UK stockmarket and the performance of individual companies. The fund's focus is on smaller companies and it can also invest in the shares of AIM-listed companies. Shares in both types of company can be more unpredictable and difficult to buy and sell compared to those of larger companies. Diversification is therefore key in managing liquidity risk and reducing market risk. The fund's risks are measured and managed as an integral part of the investment process.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Investment review

As at 2 January 2019, for the six months ended **31 December 2018**

Performance against objective

Between 2 July 2018 (the start of the review period) and 2 January 2019, the M&G Smaller Companies Fund delivered a negative total return (the combination of income and growth of capital) across all of its share classes*. The fund finished the period behind a comparative index, the Numis Smaller Companies Index (excluding Investment Companies), which returned -13.7%.

The fund met its investment objective of delivering a higher total return than the Numis Smaller Companies Index (excluding Investment Companies) over any five year period for the Class 'C' shares, but not for all other share classes. The index returned 4.2% in the five years to 2 January 2019.

* For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Fund performance' section of this report.

Investment performance

Like other major markets, the UK stockmarket was volatile in the six months under review due to concerns about rising US interest rates and expectations of further moves towards the normalisation of monetary policy. Persistent unease about international trade wars, slower global economic growth and the looming Brexit deadline of March 2019 also dampened investor sentiment. In particular, global stockmarkets saw significant volatility during October 2018 due to a sharper-than-expected increase in borrowing costs, driven by the US fixed income (bond) market. Bonds are loans in the form of a security, usually issued by a government or company, which normally pay a fixed rate of interest over a given time period, at the end of which the initial amount borrowed is repaid. Investors worried that the US may raise interest rates more quickly in 2019 in response to inflationary pressures stemming from a strong US economy. Some disappointing earnings guidance and concerns that tightening by the US Federal Reserve may dampen the US economy also weighed on investors' appetite for risk.

Authorised Corporate Director's Report

Investment review

Investment performance (continued)

In the UK, the Bank of England raised the base interest rate by a quarter of a percentage point to 0.75% in August 2018, despite only moderate inflationary pressure and weak economic data at the start of the year. Economic growth subsequently picked up a little, but more recent data suggests Brexit-related uncertainty and weaker global growth is weighing on activity.

The first half of 2018 saw modest declines for small and medium-sized companies, but the pronounced weakness later in the year held back returns for 2018 as a whole, with the stock prices of companies of all sizes declining sharply. For the period under review, small caps were slightly ahead of the wider market. Medium-sized companies were the weakest size grouping over the six months and the largest UK companies held up the best, having seen the smallest decline.

Within the smaller company universe, non-life insurers and telecommunications stocks were among the strongest performers over the period. Certain defensive stocks, such as utilities and beverages, also performed well. Defensive stocks tend to hold up relatively well regardless of economic cycles, compared to their more growthoriented counterparts. In contrast, oil & gas and construction & materials were among the weakest sectors, while technology and healthcare also lagged the broader market.

Against this background, the M&G Smaller Companies Fund finished the six-month period behind the Numis Smaller Companies ex IT Index. Performance was held back by stock selection and, to a lesser extent, asset allocation. Performance was hurt by a below-index weighting in mining and a lack of presence in telecommunications, while an above-index allocation to construction also cost some performance. In contrast, value was added by a below-index position in oil and gas, as well as an above-index exposure to general industrials.

At the stock selection level, stocks in the basic materials, consumer goods and consumer services sectors, particularly travel & leisure, cost some performance. However, performance was supported by stocks in the industrial and technology sectors.

Contributors to performance included a number of stocks that rallied following previous weakness. For example, EMIS, a healthcare software developer, had a difficult start to the year due to some servicelevel issues with the NHS, its main customer. These have now been contained and the stock staged a recovery.

Specialist motor insurer Sabre Insurance Group added value over the six months. Sabre provides specialist insurance for niche markets, such as the young and old-age groups and those driving older cars. The company has a defensive business model and performed well during the market sell-off towards the end of the year.

Alpha FX, a corporate foreign exchange specialist, produced some strong trading results, driven in particular by investments beyond its traditional small- and medium-sized enterprise customer base into new service lines.

Other holdings held up relatively well. For example, infrastructure provider Hill & Smith recovered from a summer slowdown as a number of delayed road improvement projects eventually commenced. Fund management consultancy Alpha Financial Markets and Kin and Carta, a digital marketing company, also outperformed. Alpha Financial Markets has traded ahead of expectations, while Kin and Carta has disposed of some non-core units, leaving it solely focused on digital marketing. The company has largely recovered from a challenging

The main individual detractors included branded clothing retailer Superdry, office services provider Restore, specialty chemicals manufacturer Synthomer, and Spire Healthcare Group, a private hospital operator. Superdry issued a disappointing trading update, citing unseasonal weather and general weakness in the retail industry. Restore was caught up in the pronounced weakness in the AIM market towards the end of the year, rather than being affected by any stock-specific news. Investors shunned Synthomer due to concerns about global growth, while Spire Healthcare issued a disappointing trading update.

Investment activities

New positions during the period included Elementis, a specialist chemicals business, building products firm Marshalls, and advanced biopharmaceuticals firm PureTech Health. Elementis supplies highvalue additives to the personal care, coatings and energy markets, as well as chemicals that make products more durable in a range of industrial applications. Shares in Elementis were weak in connection with a badly handled takeover approach and we bought the stock at an attractive price. The company eventually completed the takeover of Amsterdam-based Mondo Minerals in October. Marshalls is focused on the UK market and manufactures paving stones for the residential and infrastructure / commercial markets. PureTech Health is focused on developing innovative medicines that may have a better risk-benefit profile than existing treatment options. The company has a broad product pipeline and, in our opinion, has considerable potential should some of its projects prove successful.

Other new entrants to the portfolio included Essentra, a global supplier of industrial products manufactured from plastic and fibre, Staffline, a UK blue collar temporary recruitment business, and 4Imprint, a US firm supplying branded goods to corporate customers. Shares in Essentra had declined as investors lost confidence in its multi-year turnaround strategy, even though we feel it is progressing in the right direction. This weakness provided a good opportunity for us to initiate a holding at attractive valuations. Similarly, Staffline's shares declined because of concerns about Brexit and we started a holding at a good price. The company has a new management team, which is expected to drive strong operational performance and carry out merger and acquisition activity. 4imprint has a high-growth business model and looks attractively valued given its growth prospects.

We sold some positions on valuation grounds following good performance. Such disposals included veterinary products manufacturer Dechra Pharmaceuticals and Victrex, a hi-tech plastics manufacturer. Trading software firm Fidessa left the portfolio in connection with its takeover by Irish rival Ion, while we sold computer game developer Codemasters following a disappointing launch of the firm's Onrush driving game, as we had lost confidence in the investment case. Finally, against a backdrop of market weakness and heightened uncertainty, we closed holdings in a number of companies that we felt had less robust balance sheets, namely self-storage provider Safestore, European waste management firm Renewi and Spire Healthcare.

Authorised Corporate Director's Report

Investment review

Outlook

Despite considerable Brexit-related uncertainty, the UK economy has held up relatively well. Unemployment is at record lows, wage growth is improving and inflation remains contained for now. However, the longer term momentum appears to be weak, held back by global trade tensions and a lack of clarity over the nature of the UK's departure from the European Union and the eventual economic framework of the relationship between the two. Aside from domestic events, market observers will be watching developments relating to US-Chinese trade relations and the health of the global economy, which is likely to affect

Regardless of the potential for further volatility in the near term, the UK stockmarket has trailed behind major markets over the past two and a half years and, in our opinion, UK company share valuations are more attractive now than they have been for some time. Nevertheless, we feel there is a heightened degree of risk regarding corporate earnings, given the ongoing trade issues and the possibility of a 'no-deal' Brexit. We remain broadly optimistic about prospects for smaller companies, but we are taking a relatively cautious approach in the early stages of the year and waiting to see how events evolve.

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

The following charts and tables show the performance for two of the fund's share classes - Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

We show performance for these two share classes because:

- The performance of the Sterling Class 'A' (Accumulation) share is what most individuals investing directly with M&G have received. It has the highest ongoing charge of all the sterling share classes. Performance is shown after deduction of this charge. All UK investors in the fund therefore received this performance or better.
- The performance of the Sterling Class 'I' (Accumulation) share is the most appropriate to compare with the average performance of the fund's comparative sector. It is the share class used by the Investment Association in the calculation of the comparative sector's average performance. This share class is available for direct investment with M&G subject to minimum investment criteria, or via third parties who may charge additional fees. The performance shown takes the deduction of the ongoing charge for this share class into account but it does not take account of charges applied by any other party through which you may have invested.

The fund is available for investment in different share classes, each with varying levels of charges and minimum investments; please refer to the Prospectus for M&G Investment Funds (3), which is available free of charge either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Fund level performance

Fund net asset value			
as at	31.12.18 £'000	30.06.18 £'000	30.06.17 £'000
Fund net asset value (NAV)	367,518	449,970	432,033

Performance since launch

To give an indication of how the fund has performed since launch, the chart below shows total return of Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

Ten-year performance

Please note that comparative data is not available from fund launch. Therefore a ten-year comparable performance chart is shown below.

The fund's Sterling Class 'I' (Accumulation) shares were launched on 3 August 2012. Performance data shown prior to this date is that of the fund's Sterling Class 'A' (Accumulation) shares.

Financial highlights

Fund performance

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period. Calculated on a price to price basis with income reinvested.

Long-term performance by share class					
	Six months 02.07.18	Three years 04.01.16	Five years 02.01.14	Since launch	
	% [a]	% p.a.	% p.a.	% p.a.	
Sterling [b]					
Class 'A'	-15.5	+3.5	+3.1	+12.0 [c]	
Class 'C'	-14.9	+5.1	+4.6	+9.6 [d]	
Class 'I'	-15.2	+4.3	+3.8	+10.6 ^[e]	
Class 'R'	-15.3	+4.0	+3.6	+10.3 ^[e]	
Class 'X'	-15.5	+3.5	+3.1	+12.3 [f]	

- [a] Absolute basis
- [b] Price to price with income reinvested.
- [c] 27 September 1967, the end of the initial offer period of the predecessor unit trust.
- [d] 3 January 2006, the launch date of the share class
- [e] 3 August 2012, the launch date of the share class.
- [f] 1 October 2002, the launch date of the share class.

Operating charges and portfolio transaction costs

We explain below the payments made to meet the ongoing costs of investing and managing the fund, comprising operating charges and portfolio transaction costs.

Operating charges

Operating charges include payments made to M&G and to providers independent of M&G:

- Investment management: Charge paid to M&G for investment management of the fund (also known as Annual Management
- Administration: Charge paid to M&G for administration services in addition to investment management - any surplus from this charge will be retained by M&G.
- Oversight and other independent services: Charges paid to providers independent of M&G for services which include depositary, custody and audit.
- Ongoing charges from underlying funds: Ongoing charges on holdings in underlying funds that are not rebated.

The operating charges paid by each share class of the fund are shown in the following performance tables. Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of share classes may differ, and therefore the operating charges may differ.

Operating charges are the same as the ongoing charges shown in the Key Investor Information Document, other than where an estimate has been used for the ongoing charge because a material change has made the operating charges unreliable as an estimate of future charges.

For this fund there is no difference between operating charges and ongoing charges figures, unless disclosed under the specific share class performance table.

Portfolio transaction costs

Portfolio transaction costs are incurred by funds when buying and selling investments. These costs vary depending on the types of investment, their market capitalisation, country of exchange and method of execution. They are made up of direct and indirect portfolio transaction costs:

- Direct portfolio transaction costs: Broker execution commission and taxes
- Indirect portfolio transaction costs: 'Dealing spread' the difference between the buying and selling prices of the fund's investments; some types of investment, such as fixed interest securities, have no direct transaction costs and only the dealing

Investments are bought or sold by a fund when changes are made to the investment portfolio and in response to net flows of money into or out of the fund from investors buying and selling shares in the fund.

To protect existing investors, portfolio transaction costs incurred as a result of investors buying and selling shares in the fund are recovered from those investors through a 'dilution adjustment' to the price they pay or receive. The table below shows direct portfolio transaction costs paid by the fund before and after that part of the dilution adjustment relating to direct portfolio transaction costs. To give an indication of the indirect portfolio dealing costs the table also shows the average portfolio dealing spread.

Further information on this process is in the Prospectus, which is available free of charge on request either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Specific share class performance

Sterling Class 'A' Income share performance

The following tables show the performance of each share class. All 'Performance and charges' percentages represent an annual rate except for the 'Return after operating charges' which is calculated as a percentage of the opening net asset value per share (NAV). 'Dilution adjustments' are only in respect of direct portfolio transaction costs.

Historic yields for the current period are calculated as at 11 January 2019.

The share class was launched on 27	September 1967.

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for distribution to Income shares, the annual management charge and administration charge are offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

In determining the amount available for distribution, ordinary stock dividends have been transferred to capital, reducing the amount available.

Marginal tax relief has not been taken into account in respect of expenses offset against capital.

M&G Investment Funds (3)

Other regulatory disclosures

Swiss investor information

For funds registered in Switzerland we are required by FINMA to disclose the Total Expense Ratio (TER).

For these funds the TERs are the same as the operating charges disclosed in each fund's financial highlights section under 'Performance and charges'.

Accumulation shares: A type of share where distributions are automatically reinvested and reflected in the value of the shares.

Accumulation units: A type of unit where distributions are automatically reinvested and reflected in the value of the units.

Asset: Anything having commercial or exchange value that is owned by a business, institution or individual.

Asset allocation: Apportioning a portfolio's assets according to risk tolerance and investment goals.

Asset class: Category of assets, such as cash, company shares, fixed income securities and their sub-categories, as well as tangible assets such as real estate.

Bond: A loan in the form of a security, usually issued by a government or company, which normally pays a fixed rate of interest over a given time period, at the end of which the initial amount borrowed is repaid.

Bond issue: A set of fixed income securities offered for sale to the public by a company or government. If the bonds are sold for the first time, it is called a 'new issue'.

Bottom-up selection: Selecting stocks based on the attractiveness of a company.

Bunds: Fixed income securities issued by the German government.

Capital: Refers to the financial assets, or resources, that a company has to fund its business operations.

Capital growth: Occurs when the current value of an investment is greater than the initial amount invested.

Capital return: The term for the gain or loss derived from an investment over a particular period. Capital return includes capital gain or loss only and excludes income (in the form of interest or dividend payments).

Cash equivalents: Deposits or investments with similar characteristics to cash.

Comparative sector: A group of funds with similar investment objectives and/or types of investment, as classified by bodies such as the Investment Association (IA) or Morningstar™. Sector definitions are mostly based on the main assets a fund should invest in, and may also have a geographic focus. Sectors can be the basis for comparing the different characteristics of similar funds, such as their performance or charging structure.

Consumer Prices Index (CPI): An index used to measure inflation, which is the rate of change in prices for a basket of goods and services. The contents of the basket are meant to be representative of products and services we typically spend our money on.

Convertible bonds: Fixed income securities that can be exchanged for predetermined amounts of company shares at certain times during their life.

Corporate bonds: Fixed income securities issued by a company. They are also known as bonds and can offer higher interest payments than bonds issued by governments as they are often considered more risky.

Coupon: The interest paid by the government or company that has raised a loan by selling bonds.

Credit: The borrowing capacity of an individual, company or government. More narrowly, the term is often used as a synonym for fixed income securities issued by companies.

Credit default swaps (CDS): Are a type of derivative, namely financial instruments whose value, and price, are dependent on one or more underlying assets. CDS are insurance-like contracts that allow investors to transfer the risk of a fixed income security defaulting to another investor.

Credit rating: An independent assessment of a borrower's ability to repay its debts. A high rating indicates that the credit rating agency considers the issuer to be at low risk of default; likewise, a low rating indicates high risk of default. Standard & Poor's, Fitch and Moody's are the three most prominent credit rating agencies. Default means that a company or government is unable to meet interest payments or repay the initial investment amount at the end of a security's life.

Credit rating agency: A company that analyses the financial strength of issuers of fixed income securities and attaches a rating to their debt. Examples include Standard & Poor's and Moody's.

Credit risk: Risk that a financial obligation will not be paid and a loss will result for the lender.

Credit selection: The process of evaluating a fixed income security, also called a bond, in order to ascertain the ability of the borrower to meet its debt obligations. This research seeks to identify the appropriate level of default risk associated with investing in that particular bond.

Credit spread: The difference between the yield of a corporate bond, a fixed income security issued by a company, and a government bond of the same life span. Yield refers to the income received from an investment and is expressed as a percentage of the investment's current market value.

Default: When a borrower does not maintain interest payments or repay the amount borrowed when due.

Default risk: Risk that a debtholder will not receive interest and full repayment of the loan when due.

Derivatives: Financial instruments whose value, and price, are dependent on one or more underlying assets. Derivatives can be used to gain exposure to, or to help protect against, expected changes in the value of the underlying investments. Derivatives may be traded on a regulated exchange or traded over the counter.

Developed economy/market: Well-established economies with a high degree of industrialisation, standard of living and security.

Dilution adjustments: The dilution adjustment is used to protect ongoing investors against the transaction charges incurred in investing or divesting in respect of creations and cancellations. The dilution adjustment is made up of the direct and indirect transaction charges. In the financial statements the direct transaction charges as a percentage of average NAV will be disclosed. This percentage will take account of those direct transaction charges that have been recovered through the dilution adjustment leaving a percentage that just represents the costs incurred in portfolio management.

Distribution: Distributions represent a share in the income of the fund and are paid out to Income shareholders or reinvested for Accumulation shareholders at set times of the year (monthly, quarterly, half-yearly or annually). They may either be in the form of interest distributions or dividend distributions.

Distribution yield: Expresses the amount that is expected to be distributed by the fund over the next 12 months as a percentage of the share price as at a certain date. It is based on the expected gross income less the ongoing charges.

Diversification: The practice of investing in a variety of assets. This is a risk management technique where, in a well-diversified portfolio, any loss from an individual holding should be offset by gains in other holdings, thereby lessening the impact on the overall portfolio.

Dividend: Dividends represent a share in the profits of a company and are paid out to the company's shareholders at set times of the year.

Duration: A measure of the sensitivity of a fixed income security, also called a bond, or bond fund to changes in interest rates. The longer a bond or bond fund's duration, the more sensitive it is to interest rate

Duration risk: The longer a fixed income security, also called a bond, or bond fund's duration, the more sensitive and therefore at risk it is to changes in interest rates.

Emerging economy or market: Economies in the process of rapid growth and increasing industrialisation. Investments in emerging markets are generally considered to be riskier than those in developed

Equities: Shares of ownership in a company.

Exchange traded: Usually refers to investments traded on an exchange, such as company shares on a stock exchange.

Ex-dividend, ex-distribution or XD date: The date on which declared distributions officially belong to underlying investors.

Exposure: The proportion of a fund invested in a particular share/fixed income security, sector/region, usually expressed as a percentage of the overall portfolio.

Fixed income security: A loan in the form of a security, usually issued by a government or company, which normally pays a fixed rate of interest over a given time period, at the end of which the initial amount borrowed is repaid. Also referred to as a bond.

Floating rate notes (FRNs): Securities whose interest (income) payments are periodically adjusted depending on the change in a reference interest rate.

Foreign exchange: The exchange of one currency for another, or the conversion of one currency into another currency. Foreign exchange also refers to the global market where currencies are traded virtually around the clock. The term foreign exchange is usually abbreviated as 'forex' and occasionally as 'FX'.

Foreign exchange (FX) strategy: Currencies can be an asset class in its own right, along with company shares, fixed income securities, property and cash. Foreign exchange strategy can therefore be a source of investment returns.

Forward contract: A contract between two parties to buy or sell a particular commodity or financial instrument at a pre-determined price at a future date. Examples include forward currency contracts.

Fundamentals (company): A basic principle, rule, law, or the like, that serves as the groundwork of a system. A company's fundamentals pertain specifically to that company, and are factors such as its business model, earnings, balance sheet and debt.

Fundamentals (economic): A basic principle, rule, law, or the like, that serves as the groundwork of a system. Economic fundamentals are factors such as inflation, employment, economic growth.

Futures: A futures contract is a contract between two parties to buy or sell a particular commodity or financial instrument at a predetermined price at a future date. Futures are traded on a regulated exchange.

Gilts: Fixed income securities issued by the UK government.

Government bonds: Fixed income securities issued by governments, that normally pay a fixed rate of interest over a given time period, at the end of which the initial investment is repaid.

Hedging: A method of reducing unnecessary or unintended risk.

High water mark (HWM): The highest level that a fund's NAV (net asset value) has reached at the end of any 12-month accounting

High yield bonds: Fixed income securities issued by companies with a low credit rating from a recognised credit rating agency. They are considered to be at higher risk of default than better quality, ie higherrated fixed income securities but have the potential for higher rewards. Default means that a company or government is unable to meet interest payments or repay the initial investment amount at the end of a security's life.

Historic yield: The historic yield reflects distributions declared over the past 12 months as a percentage of the share price, as at the date shown.

Income yield: Refers to the income received from an investment and is usually expressed annually as a percentage based on the investment's cost, its current market value or face value.

Index: An index represents a particular market or a portion of it, serving as a performance indicator for that market.

Income shares: A type of share where distributions are paid out as cash on the payment date.

Income units: A type of unit where distributions are paid out as cash on the payment date.

Index tracking: A fund management strategy that aims to match the returns from a particular index.

Index-linked bonds: Fixed income securities where both the value of the loan and the interest payments are adjusted in line with inflation over the life of the security. Also referred to as inflation-linked bonds.

Inflation: The rate of increase in the cost of living. Inflation is usually quoted as an annual percentage, comparing the average price this month with the same month a year earlier.

Inflation risk: The risk that inflation will reduce the return of an investment in real terms.

Initial public offering (IPO): The first sale of shares by a private company to the public.

Interest rate risk: The risk that a fixed income investment will lose value if interest rates rise.

Interest rate swap: An agreement between two parties to swap a fixed interest payment with a variable interest payment over a specified period of time.

Investment Association (IA): The UK trade body that represents fund managers. It works with investment managers, liaising with government on matters of taxation and regulation, and also aims to help investors understand the industry and the investment options available to them.

Issuer: An entity that sells securities, such as fixed income securities and company shares.

Investment grade bonds: Fixed income securities issued by a company with a medium or high credit rating from a recognised credit rating agency. They are considered to be at lower risk from default than those issued by companies with lower credit ratings. Default means that a company or government is unable to meet interest payments or repay the initial investment amount at the end of a security's life.

Issuer: An entity that sells securities, such as fixed income securities and company shares.

Leverage: When referring to a company, leverage is the level of a company's debt in relation to its assets. A company with significantly more debt than capital is considered to be leveraged. It can also refer to a fund that borrows money or uses derivatives to magnify an investment position.

Liquidity: A company is considered highly liquid if it has plenty of cash at its disposal. A company's shares are considered highly liquid if they can be easily bought or sold since large amounts are regularly traded.

Long position: Refers to ownership of a security held in the expectation that the security will rise in value.

Macroeconomic: Refers to the performance and behaviour of an economy at the regional or national level. Macroeconomic factors such as economic output, unemployment, inflation and investment are key indicators of economic performance. Sometimes abbreviated to 'macro'.

Maturity: The length of time until the initial investment amount of a fixed income security is due to be repaid to the holder of the security.

Modified duration: A measure of the sensitivity of a fixed income security, called a bond, or bond fund to changes in interest rates. The longer a bond or bond fund's duration, the more sensitive it is to interest rate movements.

Monetary easing: When central banks lower interest rates or buy securities on the open market to increase the money in circulation.

Monetary policy: A central bank's regulation of money in circulation and interest rates.

Monetary tightening: When central banks raise interest rates or sell securities on the open market to decrease the money in circulation.

Morningstar™: A provider of independent investment research, including performance statistics and independent fund ratings.

Near cash: Deposits or investments with similar characteristics to

Net asset value (NAV): A fund's net asset value is calculated by taking the current value of the fund's assets and subtracting its

Ongoing Charge Figure: The Ongoing Charge Figure includes charges for the following items: management of the fund (also known as Annual Management Charge), administration services, services provided by external parties which include depository, custody and audit, as well as incorporating the ongoing charge figure from funds held in the portfolio (taking into account any rebates).

Open-ended investment company (OEIC): A type of managed fund, whose value is directly linked to the value of the fund's underlying investments.

Options: Financial contracts that offer the right, but not the obligation, to buy or sell an asset at a given price on or before a given date in the future.

Over-the-counter (OTC): Whereby financial assets are traded directly between two parties. This is in contrast to exchange trading, which is carried out through exchanges set up specifically for the purpose of trading. OTC is also known as off-exchange trading.

Overweight: If a fund is 'overweight' a stock, it holds a larger proportion of that stock than the comparable index or sector.

Payment date: The date on which distributions will be paid by the fund to investors, usually the last business day of the month.

Physical assets: An item of value that has tangible existence, for example, cash, equipment, inventory or real estate. Physical assets can also refer to securities, such as company shares or fixed income securities.

Portfolio transaction cost: The cost of trading, such as brokerage, clearing, exchange fees and bid-offer spread as well as taxes such as stamp duty.

Preference shares: Preference shares are a loan to a company that may be traded in the same way as ordinary shares, but generally have a higher yield and pay dividends on fixed dates. Preference shares have varying characteristics as to the treatment of the principal and the dividend payment, which includes ranking them above ordinary shares when it comes to dividend payments.

Principal: The face value of a fixed income security, which is the amount due back to the investor by the borrower when the security reaches the end of its life.

Private placement: An offer of sale of securities to a relatively small number of investors selected by the company, generally investment banks, mutual funds, insurance companies or pension funds.

Property Expense Ratio (PER): Property expenses are the operating expenses that relate to the management of the property assets in the portfolio. These include: insurance and rates, rent review and lease renewal costs and maintenance and repairs, but not improvements. They depend on the level of activity taking place within the fund. The Property Expense Ratio is the ratio of property expenses to the fund's net asset value.

Real yield: The return of an investment, adjusted for changes in prices in an economy.

Retail Prices Index (RPI): A UK inflation index that measures the rate of change in prices for a basket of goods and services in the UK, including mortgage payments and council tax.

Risk: The chance that an investment's return will be different to what is expected. Risk includes the possibility of losing some or all of the original investment.

Risk management: The term used to describe the activities the fund manager undertakes to limit the risk of a loss in a fund.

Risk premium: The difference between the return from a risk-free asset, such as a high-quality government bond or cash, and the return from an investment in any other asset. The risk premium can be considered the 'price' or 'pay-off' for taking on increased risk. A higher risk premium implies higher risk.

Risk-free asset: An asset that notionally carries no risk of nonpayment by the borrower such as a high-quality fixed income security issued by a government or cash.

Risk/reward ratio: A ratio comparing the expected returns of an investment with the amount of risk undertaken.

Safe-haven assets: Refers to assets that investors perceive to be relatively safe from suffering a loss in times of market turmoil.

Security: Financial term for a paper asset - usually a share in a company or a fixed income security also known as a bond.

Share class: Each M&G fund has different share classes, such as A, R and I. Each has a different level of charges and minimum investment. Details on charges and minimum investments can be found in the Key Investor Information Documents.

Share class hedging: Activities undertaken in respect of hedged shares to mitigate the impact on performance of exchange rate movements between the fund's currency exposure and the investor's chosen currency.

Short position: A way for a fund manager to express his or her view that the market might fall in value.

Short selling: This often refers to the practice whereby an investor sells an asset they do not own. The investor borrows the asset from someone who does own it and pays a fee. The investor must eventually return the borrowed asset by buying it in the open market. If the asset has fallen in price, the investor buys it for less than they sold it for, thus making a profit. The contrary may also occur.

Short-dated corporate bonds: Fixed income securities issued by companies and repaid over relatively short periods.

Short-dated government bonds: Fixed income securities issued by governments and repaid over relatively short periods.

Sovereign debt: Debt of a government. Also referred to as government bonds.

Sub-investment grade bonds: Fixed income securities issued by a company with a low rating from a recognised credit rating agency. They are considered to be at higher risk from default than those issued by companies with higher credit ratings. Default means that a company or government is unable to meet interest payments or repay the initial investment amount at the end of a security's life.

Top-down investing: An investment approach that analyses economic factors, ie surveys the 'big picture', before selecting which companies to invest in. The top-down investor will look at which industries are likely to generate the best returns in certain economic conditions and limit the search to that area.

Total return: The term for the gain or loss derived from an investment over a particular period. Total return includes income (in the form of interest or dividend payments) and capital gains.

Treasuries: Fixed income securities issued by the US government.

Triple A or AAA rated: The highest possible rating a fixed income security, also called a bond, can be assigned by credit rating agencies. Bonds that are rated AAA are perceived to have the lowest risk of default. Default means that a company or government is unable to meet interest payments or repay the initial investment amount at the end of a security's life.

UCITS: Stands for Undertakings for Collective Investment in Transferable Securities. This is the European regulatory framework for an investment vehicle that can be marketed across the European Union and is designed to enhance the single market in financial assets while maintaining high levels of investor protection.

Unconstrained: The term used to describe the mandate of a fund whereby the manager has the freedom to invest according to his or her own strategy, not being obliged to allocate capital according to the weightings of any index, for example.

Underlying value: The fundamental value of a company, reflecting both tangible and intangible assets, rather than the current market

Underlying yield: Refers to the income received by a managed fund, and is usually expressed annually as a percentage based on the fund's current value.

Underweight: If a portfolio is 'underweight' a stock, it holds a smaller proportion of that stock than the comparable index or sector.

Unit trust: A type of managed fund, whose value is directly linked to the value of the fund's underlying investments.

Unit/share type: Type of units/shares held by investors in a trust or fund (unit/share types differ by features such as whether income is to be paid out as cash or reinvested on the payment date).

Valuation: The worth of an asset or company based on its current

Volatile: When the value of a particular share, market or sector swings up and down fairly frequently and/or significantly, it is considered volatile.

Volatility: The degree to which a given security, fund, or index rapidly changes. It is calculated as the degree of deviation from the norm for that type of investment over a given time period. The higher the volatility, the riskier the security tends to be.

Warrant: A security issued by a company that gives the holder the right to buy shares in that company at a specified price and within a certain timeframe.

Yield: This refers to either the interest received from a fixed income security or to the dividends received from a share. It is usually expressed as a percentage based on the investment's costs, its current market value or its face value. Dividends represent a share in the profits of the company and are paid out to a company's shareholders at set times of the year.

Yield (equity): Refers to the dividends received by a holder of company shares and is usually expressed annually as a percentage based on the investment's cost, its current market value or face value. Dividends represent a share in the profits of the company and are paid out to a company's shareholders at set times of the year.

Yield (bonds): This refers to the interest received from a fixed income security and is usually expressed annually as a percentage based on the investment's cost, its current market value or its face value.

Yield (income): Refers to the income received from an investment and is usually expressed annually as a percentage based on the investment's cost, its current market value or face value.

M&G Securities Limited is authorised and regulated by the Financial Conduct Authority and provides investment products. The Company's registered office is Laurence Pountney Hill, London EC4R 0HH. Registered in England number 90776.
